On Tue, 01 Oct 1996 12:38:20 -0500,
in the newsgroup rec.radio.scanner,
Ray Norton <rnorton@bigrivers.com>
thoughtfully posted:

> Any one have ever good luck with the Bearcat Service Search 300?

Yep! (Kinda...)

I bought one "way back when" (June 1982) with my "hard earned"
babysitting money.

I still have it, I still love it, and it is in everyday use (even
as I type) and I have no intention of selling it. And I even
bought another one at a flea market!

The VHF sensitivity is excellent. Probably one of the best ever.
A few years ago I bought a 2006 on sale. The 300 simply blew the
doors off the 2006 in VHF-HI band sensitivity, so I took the 2006
back (yeah...I know what you are thinking!! I think the same
thing!! Arrrgh!).

After some "tweaking" of the front end, the reception improved
even more!

The front panel and keypad operation is simple and
straightforward. Although the "two row", horizontal numeric
keypad takes some getting used to.

H-O-W-E-V-E-R....I have had to "resuscitate" it many times.

It's first, and still current, problem is a loose connection
somewhere in the front end. Depending on how I flex the PC board
(or back panel), the sensitivity would drop on either the VHF
or the UHF band (one *or* the other, it toggles between).I have
to shove a wedge under the rear lip to select VHF or UHF!

Because of this, I re-soldered almost *every* connection on the
PC board, and it *still* does it! (although I have probably
prevented many other factory soldering related failures).

The second problem was my fault. I connected a 12V battery pack
to it backwards. Luckily just the reverse input protection diode
and bridge rectifiers blew and it was quickly back in service
after replacing them. It has also survived many other various
"abuses".

The third problem was a dim display problem, then eventual death.
Of course, it was the "C98" problem. This was about 6 years ago.

Recently the "C98" problem re-appeared (dim display, irratic
behavior). This time I replaced it with a "High Frequency", low
ESR, switching regulator type electrolytic.

I also put some "clip-on" heatsinks on the various TO-220
transistors/regulators that get *very* hot.

On the down side, the built-in speaker is very "tinny" and
hollow-sounding, and sometimes hard to understand at high volume
levels. An external speaker is a must. There is also a bit of PLL
noise in the audio, more so at UHF, but that's pretty typical.

> I bought one new in '81 or '82 and had to send it back to Bearcat on about
> an annual basis four or five times.. it would lose memory and reverse
> indicate delay, lockout, and aux. functions on random channels. Last
> time it failed, I retired it.

Sounds like the early stages of the classic "C98" problem. I can
almost guarantee that is your problem.

Even on a "good day", it could get confused if there were
interruptions to the power supply while it was on (loose power
plug or surges). Power cycling (unplugging it) would clear up
these problems.

> I plugged it in the other day and it played fine, even remembering the
> freqs. programmed years ago.

Mine became intermittent before it started to slowly "die".
Eventually the display dimmed and it could no longer program any
new frequencies (although it did remember the old ones). Any new
frequencies showed up as "998.XXX" when reviewed.

> Anybody have similar experiences with
> this model or do I just have a lemon..

In a way, they are all potential lemons. The basic design was
good, but the materials and quality control failed miserably.

For the "C98" problem, see the "Bearcat Repair Tips" by Bob
Parnass (Do a search, he posts it regularly to this, and to the
sci.electronics.repair group). I also recommend placing a 0.1uF
ceramic cap in parallel with the new C98.

BTW: C98 is part of a power supply that powers the display
elements and a portion of the processor board. The cheap,
undervalued electrolytic cap installed cannot handle the
high-frequency currents involved in the circuit and slowly fails.
The output of the supply then starts to drop.

In fact, REPLACE C98 ANYWAYS! If C98 has not failed yet....It
soon will!!

Also re-solder all the interconnecting ribbon cables and wires (especially the ones between the main and front panel board). The Bearcats were notorious for their s#!%%y soldering jobs. Touch up any connections that look suspicious. And make sure the PCB mounting bolts are tight. Tightening them can reduce some VHF band "birdies".

It is still an excellent radio. It's not as "fancy" as todays radios. No 800MHz or "Bazillions" of channels, but it still is great for everyday use. Especially if your services are still in the "old" 150MHz world.

I guess the BC-300 is like the VW Bug of scanners...It has some shortcomings, but it was great for it's time and still has a few loyal fans willing to keep them up.

Cheers,

Legally, the software companies cannot 'give out' the codes. The codes are supposedly only available to those that are authorized to monitor those frequencies by law. This includes the government among others. All this means that the person requesting the codes is to verify that they are actually authorized to have such. As I am not so authorized, I did not have the code but with a bit of searching on the Web, I came up with one in about 20 minutes. In fact, several weeks(months?) ago, there was a message thread here concerning the very same thing. Someone actually posted the code in one message.
>

>
I know what you mean here. I feel the same. It's just that with the current usage of the bands, I have no interest in those areas. This doesn't mean that next year I will feel the same. That is also the reason that 3 of my 4 scanners(AR1000, Pro-2005 and Pro-2035 with 2042 guts) have full coverage.

It is not illegal to own a scanner capable of receiving cellular phones
even if it was made last week. If it is illegal why are so many cellular
capable scanners imported into the USA? Is customs on the take
with Javiation and others outside our borders?=20
The ban is on the sale not the possession of these 'special' radios.

Glenn

This is the Echo/Fox circuit aka Nationwide. The uplinks sites are at
selected AT&T microwave relay stations around the US to give the SAM
fleet (AF-One, etc) nearly total coverage in the 48 contigious states,

>VHF Downlink: 171.2875
>VHF Uplink: 162.6875

This is the Yankee/Zulu circuit. It's used for local ground duplex
comms wherever AF-One might be on the ground. Y/Z is not used for
air-gnd.

>I've heard traffic on the UHF pair, but not on the VHF. From
>what I've heard, "Crown" is White House comms. They link
>to various ground stations to keep up with AF-1 (Executive One
>Foxtrot). Quickly switch between the downlink and the uplink
>frequencies to see if you can hear both sides of the conversation.

AF-1 is never Executive One Foxtrot. They are diffferent aircraft
carrying different people. Air Force One is any USAF plane carrying
the POTUS. Executive One Foxtrot is any plane carrying a member of the
POTUS's family.

:
: Thanks!
:
: Andrew
What radio are you using that has a TNC?
You should have little trouble finding GMRS Antennas, as GMRS is
462.550 - 462.725 (outputs/simplex)
467.550 - 467.725 (repeater inputs)
and com'l business is on eather side of GMRS, so A/S, Antennex, Larson
and many others make com'l business band antennas.

Free advice is worth every penny you paid for it !

What do you mean "find"?

Like in "written up in easy-to-follow instructions"? You won't. No one has written anything for the "yellow banana". There are dozens of mods that CAN be done to it, but which have been written for other scanners.

It would be up to you to research those and translate the ones that interest you. Forget cellular and memory mods, though. Not possible.

FCC License Data Sources
Bill McFadden
bill.mcfadden@tek.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

| Also available are subscrition services from companies like ISI and CET.
| Since they charge by the minute, they are not really practical for the
| hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates makes a PC-based database program called the FCC
| Frequency Retrieval System. FCC data for several states is available,
| covering all services and all frequencies. More states are being added.
| Current data is for first quarter, 1996.

| News flash--this software and data is now FREE! However, the data will
| no longer be updated, so get it while it's hot. ScanWare Associates can
| be reached at 360-698-1383 (voice), 360-698-8207 (fax), gmcavoy@oz.net
| (e-mail), and http://www.oz.net/~gmcavoy/index.html (WWW).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL
radio services between 30 MHz and 2 GHz. Each volume covers one state
and costs between $14 and $29, depending on the state. The volume for
California is 820 pages. Contact US Scanner publications at 800-890-6999
(voice) or 503-233-5176 (fax).

APPENDIX

Here is table of data fields in the FCC master. Fields provided by
various products are indicated by "#" or the field length, if known.

>That is why your fucking country is so despised throughout the world.

I say we ought to perform the "fence test" to see if the US is such a
terrible place. Put a big fence around the entire country, and compare
how many people try to get in to the number of those trying to get out.
>
>Don't look now, but every Canadian is getting real health care in
>Canadian facilities. So it takes a little longer.

("Heart attack? No problem...have a seat and will be with you in a couple
hours...")

>At least we don't have people being turned away at our ER's just because they don't have
insurance!

Federal Law prohibits any ER from turning away any emergency that walks
in. Was passed in the mid 1980s. No one is turned away...unless perhaps
someone walks in with a splinter or a paper cut, etc.
>
>Better get the facts straight shithead. Canadians can legally own
>guns. They just have to go through quite a bit of paperwork and
>background checking before they can get one. Sure, we have stricter
>gun control laws than you do, but then again, we don't have even 1% of
>the drive-by shootings you do!

How many drive by shootings took place in Canada in 1995? Do you have the
numbers? How many in the US? Let's see the math.

>I'm sure if your forefathers had seen what a mess they made by giving you >a
constitutional right to bear arms, they never would ha=
ve given it to >you in the first place.

Had we not had the right to bear arms, we would still have some Queen that
would have to OK all our laws...like some other countries of which we
know.
>
>For a country that wanted to get away from England so bad, you guys
>still want to hold onto it though. You insist on using the old
>"Imperial" method of measurement,

Yeah...cause it works.

>your national anthem's music is from a British drinking song,

Yeah...what's wrong with a drinking song?

>and one of your national songs (I believe it's America the Beautiful (what a joke there!))
uses the same music for "God Save the Qu=

een/King".

Yeah...the best music has always come from England. Look at the Beatles.

P.S. You'll notice that I didn't slam Canada once, nor did I call anyone names. I'm simply a civil tounged good ol' red blooded American.

Yes, but local ordinances could very well put safety and vehicle
restrictions to work which only affect the equipment as installed
not the actual operation. I've never seen it at work, but some states
have scanner laws which have been upheld consistently. Same
would be at work here. Washington State, like Washington DC,
likes to find creative new ways to tax it's citizens.

It's 50 ohm coax, similar to RG-58 but double-shielded. RG-223 is very good cable for jumpers in base stations etc. where a small, well shielded cable is needed.

40. C508A Question/Help

Newsgroup: rec.radio.scanner
Date: 1996-10-01 00:00:00 UTC
From: sreider@csc.umd.edu
Message-ID: <52rcm1$ta2@holmes.umd.edu>
Source record: 221624

Not to long ago someone posted how much they loved their C508A
and used it as a scanner. They commented about its wide range of RX.
Could someone who uses their 508 for scanning help me answer a few questions:

RX Freq range ?
TX Freq range ?

There were comments about how some were unable to pick up 800Mhz stuff.
Is there a way to tell which are which ?

If you have a 508 or know about them please let me know. I'm going to buy
one and want to make sure I''m getting the right thing....

Sale, yes. But also importation, too. Otherwise, imported goods must be matched by invoices or bills of lading that show the imported contraband is for subsequent export.

As far as I know, there is not a ban on parts or constituent components for cellular capabilities.

Rgds,

Bill

>> Any ideas? Anyone done this mod with any success?

>Sir, I have tried this mod and had no success. Even Bill Cheek said it
>may or may not be successful. I think that if the CPU wasn't programmed
>for it, you just can't get it.

I said that way back in 1989 when I wrote Vol-1 of my Scanner Modification Handbook. And the ONLY reason I said "may or may not" was because of reports that some people did receive 800 MHz signals after the mod. I didn't believe them, but wasn't in a position to call them liars at that time.

Now this is 8 year old information, but it turns out they must have received psuedo signals or lied about it, because the PRO-2021 is totally incapable of receiving 800 MHz.

That's the problem with "reports" when you're writing a book that represents a compendium of information. The latest information may not necessarily withstand the test of time. Another classic example was a few reports on the internal frame of the PRO-34 being welded to the frame beneath it. A number of people reported there were welds instead of hold-down screws.

Duh? I had never seen it, but what to do? Report it as a variation, I guess. Turns out, theese people didn't look hard enough for the screws that were there all along.

Another classic that I didn't report for a long time was that some PRO-2004's seemed failure-prone. Mine never was.....but over the years, I sure serviced a bunch of them. But when I wrote my first two books in '89 and '90, that information seemed unfit for publication.

Rocks and hard spots.....damned if you do and damned if you don't.

I don't know why not. Software code is not proscribed in the TDDRA of
1994. Just hardware........

> The codes are supposedly only available to those that are authorized to
>monitor those frequencies by law. This includes the government among
>others. All this means that the person requesting the codes is to

That is strictly an 'in-house' sort of thing. The law sure doesn't
require it.

> As I am not so authorized, I did not have the code but with a bit of searching on the
>Web, I came up with one in about 20 minutes. In fact, several
>weeks(months?) ago, there was a message thread here concerning the

Ok, but then you can't really in good faith tout the Opto interfaces
as a means of getting cellular.....since one person may not be able to
get the codes. You did. Others did. But can everyone? If so, what
is the use of codes? And if there were any legal implications of the
codes, and if everyone can get them, then the Opto interfaces and/or
the software are DOOMED........

>>Actually, it's not "cellular". It's more that the radio spectrum
>>includes 868.950 - 894.000 MHz and 823.950 - 849.000 MHz, and the

>doesn't mean that next year I will feel the same. That is also the
>reason that 3 of my 4 scanners(AR1000, Pro-2005 and Pro-2035 with 2042
>guts) have full coverage.

Consider that until a few years ago, the cellular bands were a part of
the UHF television band.....i.e., a change.......it might well be in
another 10 or 20 years, there will be another change.

Hence, "cellular capability" is really a buzzword for "continuous coverage" that does not necessarily imply the user's interest in cellular.

Irrelevant. State law controls what equipment you may or may not
have in a vehicle.

And BTW, I've edited the newsgroups line to remove the *repeated*
listing of rec.radio.amateur.misc which causes multiple occurances
of these postings. When are you going to get that right when you
generate these spams, Ed?

Hi!
The Op-Amp suggests some kind of audio function. An op-amp like this could mot be used at high frequencies so board probably does not amplify radio signals.
The Op-amp bay be configured as an audio filter or amplifier. Some radios have an annoying output sound from them. This may attenuate some of those frequencies. Just try connecting a speaker to the BNC and see what you hear!
Let me know what you find out, I would be interested to know.

Phil.

NO.. it is not partially correct. I said when "WHEN FLYING ABOVE 18000 FEET"

There are only a couple of places on the earth where 18,000 feet will only
provide several thousand feet of terrain clearance. Radar altimeters typically
only provide information when below 10,000feet, when the aircraft is using the
local altimeter setting so in fact, the indicated altitude should be pretty
close to the actual altitude.

NO.. it is not partially correct. I said when "WHEN FLYING ABOVE 18000 FEET"

There are only a couple of places on the earth where 18,000 feet will only
provide several thousand feet of terrain clearance. Radar altimeters typically
only provide information when below 10,000feet, when the aircraft is using the
local altimeter setting so in fact, the indicated altitude should be pretty
close to the actual altitude.

Also when the pressure conditions change flight level 180 may dip down physically
close or through 17,000 feet msl. This is why there is a lowest usuable flight level
calculation that corresponds to the current pressure conditions.

Wouldn't you want an antenna to have gain? This is a subject that has come up a number of times and the consensus seemed to be that an antenna with gain was preferable to one without (assuming that your sole purpose was to receive and not transmit). I finally settled on the Scantenna, although I started out looking to buy a discone, after talking to the folks at Grove. For what it's worth, the Scantenna works well and you can't beat the price--about $40 compared to $60-plus for a discone like the one Radio Shack sells.

If you are handy with a soldering iron open up the scanner and look for
the wires that attach to the antenna. It could be a cold solder connection
that came loose. I've repaired a scanner that would not receive anything
and this was the problem.

Any one have ever good luck with the Bearcat Service Search 300? I bought one new in '81 or '82 and had to send it back to Bearcat on about an annual basis four or five times.. it would lose memory and reverse indicate delay, lockout, and aux. functions on random channels. Last time it failed, I retired it. It been in the attic for at least 7 yrs. I plugged it in the other day and it played fine, even remembering the freqs. programmed years ago. Anybody have similar experiences with this model or do I just have a lemon..

Thanks,
Ray

: Does anyone have experience with antenna preamps for scanners? Are
: they worthwhile? I Have seen the GRE and ACE GW2 units advertised.
: Are either of those two units any good, or are there better units on
: the market?

: Thanks. Dennis,

Dennis,

About 2 or3 months ago, I purchased a Radio Shack Handheld Scanner Preamp. It's made by GRE and sells for about $65.00. It was specially ordered and they did *not* have it in stock. I am quite impressed by its performance. This unit is *tiny*. I'm talking like maybe 2 inches cubed. I live about 20-25 miles from a local airport in a suburban community of Pittsburgh. I had a *hard* time picking up any clear airtraffic. After attaching this unit, I get traffic loud and clear. I am a picky buyer, but I must admit I tuned to a fuzzy scratchy faint signal not even showing a "1" on my signal strength indicator(on my Alinco), then I twisted the knob to MAX, and the signal came in clear and a full "9" on my indicator. That's when I decided this would not be one of the units I was returning to radio shack.

I'd suggest this one despite others mentioning the fact that itcaused some intermod on their scanners.

my .02

Keith

No...you are not alone....similar experiences with mine. The
lights and displays would not light...the lock out did not
work and the unit hit all birdies in the world and made my
listening a nightmare....so put it in the box and bought
a 210xlt....which is still fine unit...the 210 went out and
could not get it fixed by BC....

someone asked me if I had a 300....would i sell it. so i got it
out of box and turned it on and it does work again....
It's the most sensitive scanner I have besides the newer bcats
and RS's....It gets counties up in the wine country still....
the others all I get are "i wish I could" noises.

It's great for the 150's and the low freq's....the best
in finding these up in the wine country...gets some police
channels I cannot get with the others across the Susuin
Straight....here in No Calif.

Just a very sad buyer to be when i said i'd keep it.

Outdoes those Regency Turbo Scans as far as sensitivity.

I think they are in the box now...

I think, but can't swear, that it's technically illegal, in general, to
import cell-capable scanners for personal use to the US. It's just that
you normally won't get caught importing a single scanner for personal
use.

i.e. Maybe customs hasn't caught on, or doesn't take the time to
check small scanner shipments for cell coverage, or knows but doesn't
usually care about individuals importing small numbers of cell capable
scanners.

Actually, it's illegal to manufacture or import such scanners. I don't
know if it's technically illegal to sell or own such a scanner even if
it was illegally manufactured or imported.

Hello all...

I have just picked up a PRO 2006 in a pawn shop for 125.00 it has the Cell Mod and both a Signal Meter and an SWR Meter, I would like to have a list of the things that can be done with this scanner, so I can check what has been done inside, it seems to have a couple of extra mini jacks on the back (don't know what they are for). So if someone could send me the mods and how they are done, I can go inside and trace it out to see what they have done. Scanner works great and I know it was a steal at that price. Hell it even had a light installed over the keypad for viewing the keys in the dark. Also was wondering if anyone knows what the government is keeping from us as the latest beyond police call says that the government says that 824-849 and 869-894 (cell phone) be locked out was wondering what the 824-849 was for?

There are so many mods available for this scanner you will find that
99% of them will not be posted here. Your best bet would be to
find/buy the at least the first 2 volumnes of Bill Cheeks books
"Scanner Modification Handbook". I don't have the 3 volume yet so I
can't say anything about that one. I do have the first 2 and found
them to be very helpful. Another thing that Bill would suggest and I
highly concurr, is to purchase the service manual from Radio Shack.

I think you may be correct. Here is a portion of the ECPA that should =
clear it up; :-(

------start------

=A7 2512. Manufacture, distribution, possession, and advertising of =
wire, oral, or electronic communication intercepting devices prohibited

(1) Except as otherwise specifically provided in this chapter, any =
person who intentionally--

(a) sends through the mail, or sends or carries in interstate or foreign =
commerce, any electronic, mechanical, or other device, knowing or having =
reason to know that the design of such device renders it primarily =
useful for the purpose of the surreptitious interception of wire, oral, =
or electronic communications;

(b) manufactures, assembles, possesses, or sells any electronic, =
mechanical, or other device, knowing or having reason to know that the =
design of such device renders it primarily useful for the purpose of the =
surreptitious interception of wire, oral, or electronic communications, =
and that such device or any component thereof has been or will be sent =
through the mail or transported in interstate or foreign commerce; or

(c) places in any newspaper, magazine, handbill, or other publication = any advertisement of--

(i) any electronic mechanical, or other device knowing or having reason = to know that the design of such device renders it primarily useful for = the purpose of the surreptitious interception of wire, oral, or = electronic communications; or

(ii) any other electronic, mechanical, or other device, where such = advertisement promotes the use of such device for the purpose of the = surreptitious interception of wire, oral, or electronic communications,

knowing or having reason to know that such advertisement will be sent = through the mail or transported in interstate or foreign commerce,

shall be fined not more than $10,000 or imprisoned not more than five = years, or both.

(2) It shall not be unlawful under this section for--

(a) a provider of wire or electronic communication service or an = officer, agent, or employee of, or a person under contract with, such a = provider, in the normal course of the business of providing that wire or = electronic communications service, or

(b) an officer, agent, or employee of, or a person under contract with, = the United States, a State, or a political subdivision thereof, in the = normal course of the activities of the United States, a State, or a = political subdivision thereof, to send through the mail, send or carry = in interstate or foreign commerce, or manufacture, assemble, possess, or = sell any electronic, mechanical, or other device knowing or having = reason to know that the design of such device renders it primarily = useful for the purpose of the surreptitious interception of wire, oral, = or electronic communications.

----end----

Now this is something I definitely know about...

I develop encryption software for a living. You will not crack
anything DES encrypted in the near future. That's why the
U.S. Government is so afraid of it. Not even they can crack it.
In fact, at this point in time, it is consider by US Law to be a
munition, and exportation of any software containing DES is highly
illegal. And if you do happen to have a Cray-YMP laying around,
all that a manufacturer would have to do is lengthen the key.

Bob's review is why I bought the PRO-2042. Great scanner. I also got
the radio shack all band mag mount scanner antenna and it works pretty
good.

I've got a lovely bright yellow sports cat, and have been scanning
with it for about two years. I love it! For some time now, I've
been searching for mods etc. There's one thing for sure, there are
no mods. (at least as far as I've found.)

If you want cellular, get a frequency converter for about $50 at
several electronic kit and radio stores. "Warning, using this
to monitor cellular frequencies is illegal!" he he he...
It about 2" square and fits between your scanner and antenna and
converts 800 MHz down to whatever, 400 MHz, etc...

I doubled in CS and EE and when time permits, my plans are to
workout a computer interface for programming the memory. Those
100 channels go really fast.

I suggest you get the Bill Cheek books. As far as the 824-849 mhz
frequencies, these are the mobile- or portable-to-cell site frequencies.
In other words, the input frequencies to the cell site.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello, all--

I know this is kinda old stuff, but I wanted to straighten this out...

It has come to my attention that certain people have misinterpreted my meaning when I suggested the creation of a alt.idiots.postings newsgroup. I was NOT being critical of the original poster-hell, where else should a question about scanner cases be posted--(being the owner of a 8k and having obtained a nice case for it, I think I even emailed the place where I got it to the original poster)

but I digress....I was recommending the newsgroup for the person that suggested that the original poster was 'wasting bandwidth'. The LAST thing that I would do is to be critical of a 'newbie' type question, as I am quite new to the hobby as well (and might have some 'stupid' questions in the future...who knows)

I apologize for any offense that might have occurred due to my statement--

Let me rephrase--

I think the newsgroup should be called

alt.idiotic.responses.to.completely.appropriate.questions.posted.in.a.newsgroup

I hope this clears this up--Thanks for the opportunity..

(fully expecting the flames for 'wasting' more bandwidth...)

What the hell are you talking about? According to BILL CHEEK,
nothing is as good as rg-59 regardless of wether it is 50 or
75 ohm & regardless of the application.

OK Bill, support your statement proving that the UV sensitivity of mose
coax
cables is a "old wive's tale". Tell us the study, technical article, or
reference in a credible book or magazine that supports your (stupid)
statement.

> Like I said, RG-8, RG-8x, RG-59, RG-6, Belden 8214 and 9913 and many

NOT if they are exposed to sunlight, about 6 years is all they can
take.

Can you even provide a single shread of documentation to support your
statement rather than attempting to detract from the issue by cutting
down ham radio again to help with your defense.

> Unless, of course, you'd care to state specifically what it is that

YES, & it is the insulation for the center that becomes violated
when exposed to sunlight.

> Yes, Mr. Mackey, I am an engineer. You are a bedpan changer for a

Funny how you HAVE NEVER been able to come up with anything to
support your status an an engineer. No fcc license, no degree,
no accreditating body, nothing. No wonder you come up with the
bedpan changer idea, that is probably what you do for a living.

heheehehheehhehhehehehehehehehehehehehehehehehehohohohohohohohohahahaahha
hahaahahahahahahahahhharharharharharharharharhehehehawhawhawhawhawhehe
heheeh

No, actually, you stole the bedpan thing from Glenn Hansen because you
are to lame/stupid to come up with anything original. Instead, you
copy from others (sorta like how you always come up with scanner mods
shortly after Bob Parness comes up with them).

heheheehe

DON'T JUNK THAT OLD BEARCAT BC-300

Copyright 1989 by Bob Parnass, AJ9S

[Notes: This is a reprint of an article published in the
June 1989 issue of The Radio Enthusiast and August 1989
RCMA Journal. This article may not be reproduced in whole
or in part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

Although the Bearcat BC-300 scanner is no longer available, it occupies a fond place in my collection. I exercise little self control when I see a used BC-300 for sale cheap, and have adopted two broken units. They make fine radios after repair.

The BC-300 was the forerunner of today's 760XLT. It was a 50 channel feature laden scanner, introduced around 1979, back when Bearcat was part of Electra. Retail sales of the BC-300 continued until 1987, when it was discontinued by Uniden.

Although Electra offered the pricey BC-350 as a step above the BC-300, firmware bugs and a batch of bad power transformers doomed the 350, and the 300 remained the jewel of Bearcat line.

It's easy to see why the BC-300 model was offered for several years. It boasted premium features like a clock, a carrier operated solid state relay for tape recorder activation, a transmission counter, and a Service Search of 11 ROM banks of preprogrammed channels. For memory, the BC-300 used EAROM (electronically alterable read only memory), so backup batteries were not necessary. The Dog House, a radio shop in Fairfax, Virginia, at one time offered the DH 1000, a 1,000 channel adapter for the BC-300! Unfortunately for federal band listeners, the BC-300 lacked coverage of the 138-144 and 406-420 MHz bands.

While outwardly impressive, internal construction was typical of Electra hand wiring in that era -- a bit messy. BC-300 schematics show at least 100 components changed between earliest and later units. The scanner went through many circuit design changes, but rather than changing the printed circuit board, new components were tack soldered on the foil side in different positions.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P2284" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

Switching power supply failure was common in early units due to insufficient capacitance. Electra responded by increasing the value of capacitor C98 from 22 ufd/16 v to 47 ufd/25 v, but I recommend 47 ufd/35 v. If your display is getting abnormally dim, C98 is probably the culprit, as it was in five Bearcat scanners I fixed.

Squelch preset potentiometer R81, mounted on the radio circuit board, was misadjusted in new units, requiring readjustment after the components aged.

In one radio, I replaced Q9, a small signal PNP transistor. Its failure caused the BC-300 to become deaf on all but the UHF band. Failure of squelch gate transistor Q15 caused the squelch to remain open at all times.

Cold solder joints, especially on the wires and ribbon cable connecting the radio board to the logic board, have been responsible for other failures.

I have seen serious IC failures in three BC-300s built around 1984. These include CPU chip IC201, memory chip IC202, and IC203, not in stock at your your local Radio ShackO.

The BC-300 circuitry, especially on the radio board, is very similar to the circuitry in the the BC-220, BC-20/20, BC210XL, and BC-350, so some of the previous remarks may be applicable to these models as well.

I can neither furnish schematics nor repair your radio. If you come across a broken BC-300, obtain a schematic from Uniden and spend some time troubleshooting.

The BC-300 is a classic scanner and worthy of
your efforts.

Then why do most new 800 Mhz scanners pick up cell phones by "immaging"?
Answer that one Micky Mouse!

There are more 11 meter amps out than there are ham operators out
there.....thats the facts. Control of the CB band is to far gone....only
those 2000 watt stations who interfear with other things are at risk.
face reality!

81. Want to buy used scanner in SLC-Provo area

Newsgroup: rec.radio.scanner

Subject pretty much says it all.

I'm looking for a decent used scanner and want to try it out before I buy it from you. I live in the SLC-Provo, Ut. area and would like to buy from someone who lives in this area.

Get back to me if you'd like to sell your scanner.

Later..

>**BUT** your commercial (FCC phone) would have a "license number"

Yes, it does. But it is not a callsign. And no one is interested in
the numbers on 1st Phone tickets. They don't mean a thing.

>rather than a callsign. EVERY Radiotelephone (or telegraph too) issued
>by the FCC has a license number. Due to slight differences, your

84. Indoor/Apartment Antenae

Newsgroup: rec.radio.scanner
Date: 1996-10-02 00:00:00 UTC
From: CAD <csi@rt66.com>
Message-ID: <01bbb085$3e4d1a80$56b03bc6@none.rt66.com>
Source record: 221418

When I purchased a scanner about a year ago, I asked an Electrical Engineer that I worked with, how to make a good indoor/apartment antenae. I told him I was interested in listening to aircraft specifically (I live in the Albuquerque area, but the airport was about 15 miles away). He first sat down at his desk and started doing some math on a piece of paper. After that he told me to get some coax cable (RG 174/U) and a BNC connector (50ohm). Then he told me to strip exactly 23 inches of shrouding from one end of the cable, seperate the two conductive wires, and wrap the loose "ground" with what was left over from the shrouding. Then I connected the BNC to the other end. There was my antenae.

The thing works pretty good. I pick up alot of air traffic that I wouldn't otherwise have been able to using the rubbe job that came with my Pro-43. I was just wondering if there was anyone out there whose made there own indoor/apartment antenae and what kind of results they were getting by using it. Or if there is something commercially available designed specifically for indoor use. I also would like to know why my buddy had me make the antenae 23' only and if this was the right length to use regardless of what type of coax you use.

Just wondering...

The new radar detectors are 'intelligent' ones, in that they can
receive coded signals and display a message alerting the driver
to hazardous conditions, work, or emergency vehicles.

Seeing a demo of them, I was impressed. Being an emergency responder,
I find this a great tool.

Hook up with a local ham radio club. They can show you how to build a
direction finding antenna for a buck or two. In fact, they probably
would be happy to help you locate the source as sport.

50 Ohms is the impedence of the imput circuit of the scanner, so use
50 Ohm Coax
to get an impedance match. 23 ins is about a quarter wavelength in
the Aircraft band. The antenna you described is a half-wave dipole
with an impedance of 50 Ohms.

Cheers,

Bob.

>
>clint.bradford@atdbbs.com

Sadly, this is true. I have two RS PRS-101s for GMRS use. I'm reduced to using the interstitals since there is occasional traffic my primary GMRS channel which comes through all day long. I use one PRS-101 as a base unit and the other is in my car. Good thing the "inters" are clear in Middle Georgia or I'd have to get CTCSS toned radios in a bigger hurry than I plan to already.

Generally, if you want reliable full time, longer range GMRS handhelds, go with the Maxon 210+3 or similar unit with tone squelch. If you want FRS style, special purpose only radios, go with the GMR100 or PRS-100/101. Always operate under the Part 95 rules (be licensed).

97. CHP San Diego base freq? It isn't Orange-B any more

Newsgroup: rec.radio.scanner
Date: 1996-10-02 00:00:00 UTC
From: jeh@cmkrnl.com
Message-ID: <1996Oct2.135836.7011@cmkrnl>
Source record: 221431

What has happened to the CHP Base frequency in San Diego? I can still here the mobiles on Orange-M, 42.66, but Orange-B, 42.88, has been silent. I've been monitoring all the other known CHP freqs, gradually eliminating the poor candidates (such as base freqs in nearby areas), but haven't found the new San Diego base yet.

According to _Monitor America_, the CHP has acquired some 39 MHz freqs formerly used by the California State Police, and one of these (39.40) is quite active in the San Diego area. At first I thought this was the new San Diego base, but it is apparently only for dipatching freeway assistance to motorists and similar non-law-enforcement stuff; the traffic is not related to what I hear on 42.66 and furthermore 39.40 is *simplex*.

The rate at which pressure changes with altitude also depends on the
temperature of the air, so the altimeter reading probably isn't that accurate
on days when the temperature is not close to standard.

Keith Braithwaite wrote:
>
> I NEED THE MOD. TO RECEIVE CELL. FREQ. BC80.

Hi Keith,

It depends on what freqs your talking about. he vast majority of intermod is caused by pager transmitters. This is due to at least 3 reasons:
1. Hi ERP- 250W is a minimum.
2. High duty cycle- almost always on the air.
3. The spectral allotment they re assigned to. At VHF and UHF there are 2 sets of primary frequencies. True 3rd (and higher) order intermod needs these 3 requirements to become rampant.

Now at VHF and UHF the pager freqs are prety well built out. But 900 MHz is expanding rapidly. So if you're seeing worse 900 MHz intermod, yes it can and will get worse.
Our company manufactures a patented intermod filter models for vhf AND uhf. These were reviewed about 6 months ago in US Scanner News.

Short of a filter you might try an adjustable attenuator or a directional antenna.

Hope this helps.

>Shack sells.

Yes and no. High gain can only usually be had on a small range of
frequencies. For example, my 2M antenna can have high gain within the
144-148MHz band, but it would not have the same characteristics
outside that range. It might be great for 160MHz police, but awful
for 800MHz trunked system monitoring (actually, it works reasonably
well for both). I'm not sure how one would construct an all-band
high-gain antenna for 30-1300MHz? I think it would look weird.

And gain is important on transmit. Typically the more the better,
except in at least one case where someone I talked to was using too
high a gain antenna on a mountaintop and was not reaching local 2M
repeaters in the valley very well because the radiation pattern of the
antenna was too horizontally directional.

Mainly what you want is good all-around frequency coverage even if
it's little or no gain throughout. What you don't want is gaps in
coverage that are important to you where you might get very poor
reception.

BTW, I still think the best thing you can do is get the antenna up
high and outside with good quality coax and good connectors. Just
getting a basic home-made 2M 1/4 wave vertical (made from Coat Hangers
and an SO239 chassis-mount coax socket from RS) up high was good
enough for several of my friends for 2M transmit and very reasonable
scanner reception. It works well for the 160MHz range (close enough
to 144 that it seems to work well) and has some gain on 440-480MHz
(close to 5/8 wave). Nothings perfect. And this for under $1.50
(excluding coax of course).

105. Repost of a mod for older Bearcats

Newsgroup: rec.radio.scanner
Date: 1996-10-02 00:00:00 UTC
From: Brad Wicks <brawicks@netnitco.net>
Message-ID: <325209BC.437A@netnitco.net>
Source record: 221439

After easily Modifing my bc175xl the other day, to get 4 more memory channels, I started to wonder if this mod would work on other bc scanners if they had the same cpu. There are 4 other so called 16 channel bc scanners, they are the 142xl, 145xl, 147xl, 148xl. The key here is the vc-1115 and vc-1115a cpu. it is a 20 channel cpu. It was fanily used in the bc172xl with all 20 channels hooked up. Below is a repost of this mod:

If you have a 16 channel bc175xl ,you can add 4 more memory cannels to it very easly. If you have cpu# 1115 or 1115a you can do this. On the top left corner of the cpu count down 5 pins. If you can read the name on the cpu and it is up right and you go to the left you are at the place for this for this mod. Beside the 4th and 5th pins on this side, there is a solder pad, an 1/8 of an inch to the left is another solder pad. Make a solder bridge between them and you will get 4 more memory channels.

First you have to know the limits of the scanner. Then I start on an empty channel, enter a starting frequency, then press limit. Next enter an ending frequency, and press limit again. Then press the search button. If something comes along you want to hear, you can press hold. From there you can use the up and down arrow keys, or press search again. No matter what happens next, power down, etc., the radio will remain with these limits for search. At any time you can press search and the radio will use these limits. You can also add delay if desired.

No, I am simply asking Bill Cheek to put up or shut up. He has stated numberous times he has a FCC issues commercial radio-telephone license. I have simply asked him to demonstrate proof by giving the license number. Why would he have a reason to hide his license number??

That would make some sense, because I pick up a lot of cell phones in the 400 MHz range, so the pseudo-signal theory sounds fair.

It probably doesn't work then, but I find it odd that Grove Radio advertises that they will perform the mod for $40.

No, that's what amateurs call it. Maybe some pro's. Maybe others.
The most correct term is "heterodyning".

>Well, "Don't try this at home" is what I really should have said.

Why? You're being silly now.

>>>The 145158 is a CMOS device...do we need to go thru this again ?

>>Don't go through it at all. The chip isn't going to blow. There are

>Okay...suit yourself !

Believe me, I am suited.....as are thousands of others.

> CMOS is bullet proof and hanging antenna
> wires off an open ended pin is quite acceptable in your
> eyes...Motorola (the OEM of the MC145158) claims otherwise
> and people in the know wouldn't try it.

Then they or you are being silly and adolescent alarmists.

>Yes, powered up electronics is more resilient to static discharge.

Much more so.

>Yes, diodes on the i/o pins of CMOS parts HELPS.

A lot, too.

>They still package CMOS parts in anti-static bags and rails.

That's for liability reasons and for reasons of lack of control once
the parts leave the warehouse. It's also an ISO-9000 procedure that
adds 50% or more to the cost of the parts.....that WE PAY out of our
pockets.

>Those handeling CMOS parts should use grounding straps and anti-static
>mats.

How silly. That, too, is a liability issue and an example of extremism. There is a place for it in R&D and in manufacturing where even 1 in 1000 failures are needlessly costly. The astute hobbyist and experienced pro does not use grounding straps and a/s mats except if it is convenient to do to, or if there is a prevailing reason. If working under an ISO-9000 certification, then of course.

>Yes, CMOS parts are still to be treated with care against static.
>Connecting a long wire onto one is an open invitation for possible
>future trouble.

No, it is not. At least, I did NOT specify a "long wire". I specified one of several inches in length, insulated, and held by the insulation. Read the procedure, Duff. Or, is the Queen's English a little too much for you to handle?

>>No matter.....but what you don't know is that I developed this
>>procedure and sent it out for wide beta testing SEVERAL YEARS AGO.
>>This recalibration procedure for X-301 in the PRO-2004/5/6 is nothing
>>new, Mr. Duff. It is time-honored and proved. Field proved.

>Your "developed procedure" more approprately labelled "adaptation"
>is older than the antique equipment in your photo.
>You developed nothing...just applied it to the scanners.

No, I did not adapt this procedure. The matching of X-301 to WWV is nothing new or innovative, but the exactness of the whole process of adjusting X-301 to precision tolerance is MY development.

>Never mind the bullshit.
>You may speak and write as a hobbiest. Best to call a spade a spade.
>At least SOUND like a professional.

When I address a professional audience, I will talk "pro-lingo". When I address a crowd that barely knows a resistor from a resister, I will choose my words according to my conscience and experience, and invite you to pack it where the sun never shines if you don't like it.

>>The adjustment of X-301 in the PRO-2004/5/6 is a hands-on process, and
>>one that can be done by most anyone. My article showed how to do it.
>>And it's been done exactly as I described for over four years. People

>teminology even after the use of analogous means of conveying the
>message.

Well then, Mr. Duff, let's see you get off your duff and "educate these good people" yourself. Get off your sorry ass and do something for THE people instead of potshooting at me.

>>that would be silly and a waste of time. I dispense with the glossary

>I wouldn't be so bold as to make such assumptions about the
>general public and scanning enthusiasts in particular.
>They are a lot more knowlegeable and interested than they used to be.

I don't make assumptions. That's why my books and monthly World Scanner Report newsletter are so immensely popular. They are widely read, assimilated, and applied by junior high school students to grizzled engineers..... I DARE you to mount a challenge to do any better, Mister Duff.

You ain't got a hair in your sorry duff if you don't rise to THAT challenge.

>My last comment is that a reasonably calibrated hobby grade frequency
>counter is suitable for making the not so necessary oscillator
>adjustment. Even at a difference of a few hundred Hertz, it is hardly
>detectable in AM and FM. Why would somebody need to calibrate the
>osc. to a degree of accuracy that is not necessary ?
>You're the one that insists that it is "layman" hobbiests who you are
>dealing with not lab technicians seeking high resolution accuracy.

>Intrusional risky methods of calibration certainly don't outwiegh the
>conventional use of a Radio Shack or OptoElectronics frequency counter
>in my books...especially in this case.

Oh my goodness, you are a very foolish fellow, then. Don't you understand what happens when "a few hundred hertz" at 10 MHz is multiplied up to the LO injection frequencies of 600 MHz to 1900 MHz?

Here, I will explain so your fogged gourd might comprehend: suppose X-301 is 100 Hz off at 9.999900 MHz. Got that? Now let it multiply up to the 1900 MHz injection freq and where you might should have 1900.000000 MHz, you will really have 1899.981000 MHz, for an error of 19-kHz. A "few hundred hertz" off would only compound that error all the more. The manufacturer's spec for X-301 is +/- 5 Hz, Duff. In actual practice, we *might* could tolerate an error of +/- 10 Hz or maybe 15 Hz. Even there, a 15 Hz error multiplies to an error of almost 3 kHz at the LO injection frequencies. THAT gets to where it can make a difference in performance

So TELL ME, Duff, why is it you blow and snort over the Motorola chip spec, and then disregard the spec for X-301?

You silly fellow you!

>Hugh Duff VA3TO Toronto
>Not pretending to be an Enginener !

For you, it WOULD be a pretense.....

>(Anticipating more forged e-mail replies after pissing off ol' Billy!

Beg your pardon?

By the way, is there any way to disable to key beep?

Also, I've noticed that there is some mention of limited computer interface capability for this radio. What will I be able to do different if I interface it?

I know its an old radio, but I got it fairly cheap and for some reason I really like it. The area I live in doesn't have much 800MHz stuff going on anyway.

What I really want is a 2006, but I can't find one, and even if I could, I doubt I could afford it right now.

If I squint a lot, the 2021 looks like a 2006, so it makes me happy for now :-)

>Wouldn't you want an antenna to have gain?

Well, sure. But, gain (and bandwidth) are like having your cake (and
eating it, too). You want gain, you sacrifice bandwidth....you want
bandwidth, you sacrifice gain.

> This is a subject that has come
>up a number of times and the consensus seemed to be that an antenna with
>gain was preferable to one without (assuming that your sole purpose was to
>receive and not transmit).

Even for transmitting, gain is a primary factor in most instances.
Gain is almost always desirable. Like money. But you don't get to
have gain and still cover the spectrum of 25-1300 MHz. Not short of a
log-periodic beam antenna, or...in certain cases, like your Scantenna.

> I finally settled on the Scantenna, although I
>started out looking to buy a discone, after talking to the folks at Grove.
>For what it's worth, the Scantenna works well and you can't beat the
>price--about $40 compared to $60-plus for a discone like the one Radio
>Shack sells.

And the RS discone really ain't worth a hoot. It's poorly made and without a vertical resonator, it's lower end of performance is about 100 MHz.

You did ok. The liability of the Scantenna is that its gain comes at the expense of loss of bandwidth....but they were smart about it. There are three bands that are emphasized in the Scantenna....VHF-Lo, VHF-Hi, and a good hunk of UHF. There is likely to be 2-3 dB of gain at the centers of each of those bands. Trouble is....outside of those bands, like the mil-aero, VHF-mid, UHF-mid and the extreme ends, there is likely to be a negative gain (-x dB) of some value. The designer's theory was that most scannists confine their attention to the public safety bands, and they would never notice the dropoff in performance in the off-bands.

So, depending on your monitoring habits, you might never know that the Scantenna doesn't perform all that great "off the beaten path". Discone antennas are pretty much 0-dB gain across their bandwidth of several octaves. Don't let the 0-dB confuse you. It is a gain of 1. +x dB begins at a fraction over 1 and goes up. -x dB begins at a fraction under 1 and declines toward, but never reaches 0.

Remember that a decibel (dB) equals 10 x Log<10> of a ratio. When the ratio is 1, the logarithm of 1 is 0, 10^0 = 1, or any number to the 0 power equals 1) and 10 times 0 is still 0. That's 0-dB, not 0 gain. There really is no such thing as 0 gain. But there is 0-dB of gain. (gain of 1). And there are negative dB values of gain, meaning less than 1 (but greater than 0). For a fact, a dummy load even has a gain greater than 0, even though it might be said to be -30 dB.

Clear as mudd?

:-)

I'll give you a partial list, but as to how they're done, that's out
of the question. I wrote three books and five years of newsletters on
hacking and modifying that scanner, and so many words or less won't
get it. Nor will you find the predominat share anywhere else, either.

1. Enhanced Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay - user adjustable
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mod
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio outputs
14. Event Counter
15. Shielding of plastic cases
16. External DC power
17. Improved Adjacent Channel Rejection
18. Speed up of SCAN & SEARCH modes
19. Interfacing to a computer
20. Subsidiary Carrier (SCA)
21. Extended Memory to 25,600-channels & up
22. Cellular restoration
23. 54-88 MHz restoration
24. Data/Tone Squelch
25. Autotagger for active frequencies
26. and lots more....

>I can go inside and trace it out to see what they have done.

Good luck, if they went to any extent! :-)

> Also was wondering if anyone knows what the government is keeping from us as
>the latest beyond police call says that the government says that
>824-849 and 869-894 (cell phone) be locked out was wondering what the
>824-849 was for?

Mobile cellular phones transmit on 824-849 MHz while the cell sites
transmit on 869-894 MHz. The cellular system is basically a system of
repeaters and mobiles.

with.
>

Dave,
Thanks for your email.
You spoke with me yesterday about this. Here's the scoop.
Technically speaking, the OS456 will work with the 2004. However, it does not fit in the 2004 like it does with the 2005/6. In addition, the wiring harnesses that come with the unit are not compatible with the 2004.
Now, if you want to try and determine how to fit the two boards together (see wiring harnesses) then you will need to do that on your own. We don't
have that information. Be advised that the board itself does not physically
fit into the 2004. If you can get it wired together it will work, it's just
that the board will be hanging out of the 2004.

Sincerely,

Kevin Cox

To those of you in the USA that may be interested in DDI's (the Digital
Data Interpreter). The DDI is a complex controller, that interfaces with
a scanner (or fitted inside one). The DDI will control the scanner and
decode
cellular signals to allow the tracking of cellular calls, Phone number,
ESN,
DTMF and voice information can be decoded / recorded. The DDI will also
allow
the scanner to be controlled directly by the computer.

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me
I could make $50,000 within a month for an investment of only $5.

I started toying with the idea. But I shoved it aside because it was
all supposed to be a big scam. But even the risk is so small only five
miserable dollars !!

Two weeks later, I began recieving money in the mail! I could not
believe it! Soon, hundreds, and then thousands of dollars began to
roll in. Within 4 weeks, I had recieved a total of $32,445! It came
from everywhere in the world.
My bank account has changed its "-" into a big "+" (++++)!!!,I bought
myself a car and my relationship with my girlfriend really started
improving!

If you follow the three steps below, there is no reason why the same
shouldn't happen to you! This is a legitimate investment opportunity.
You invest $5, and you recieve a return on your investment. So does
the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY
LEGITIMATE.

If you are not interested, then don't participate, but please print
this article and pass it on to someone who may be interested, so they
can take advantage.

The procedure is simple:
1) Write your name and address on 5 sheets of paper. Below that,
write the words, "Please add me to your mailing list." Fold $1 note or
bank draft or money order in each piece of paper and mail them to the
following 5 addresses.:

1. Linda Lapierre, PO BOX 212275, Martinez, GA 30917 USA
2. Oleg Gorbik, 10834-97 St., Edmonton, AB, T5H 2M3, Canada
3. Christo van Zyl, 20 Hattingh Rd, Summerstrand, Port
Elizabeth, 6001, South Africa.
4. Alexandre Figueiras, Av. S. Joa de Deus, 43 - 2 Esq., 850 Portmao,
Algarve, Portugal.
5. Ruth Ragan, Rt 3 Box 119A, Odessa, Mo. 64076.

2) Now remove the top name from the list, and move the other four
names up. In other words, #5 becomes #4 and so on. Put your name as

the fifth one on the list.Use a simple text editor such as Notepad,in your
"accessories" window (If you have MS-Windows),or DOS editor.In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many.Try posting to as many newsgroups as you can,and the bigger the newsgroup is,the more people are to see your message !

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym,call yourself "The Manager","The Boss"
,whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I recieved 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people= $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one
cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS,
AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?"Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five seperate dollars... ?

just think of all of the new Internet users that join the net every day
!!!

There are millions of internet users, and millions of new net surfers
every month !!!
This is the great plus of the Internet,people all over the world can
hear
you and listen carefully if you talk reasonably.Everyone will take
that chance !
I agree,If it wasn't the Internet,and was a small circle of people,the
chance wouldn't have been so small.the amount of money had to be 200
times
bigger,and the chances were zero.It wouldn't succeed.

But here,on the Internet,it is a giant village,where new thousands of
members join in every day ! you CAN'T lose
!!!!

Remember- read the instructions carefully, and play fairly. Thats the
only way this will work. Get a printout so you can refer back to this
article easily.

Try to keep a list of everyone that sends you money and always keep
an eye on the postings to make sure everyone is playing fairly. You
know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY.
YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!!

BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE
REASONABLE
AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD
MINE.

GOOD LUCK FOR YOU ALL,And remember,play fair and you'll win,I don't
want to mention what might happen to those who won't.

AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED
FOR A LONG TIME
..... !!!

That would be a curious defense since use itself (on 11m) is illegal.

Maybe one needs to claim import for private non-use?

It cuts the high frequencies (in the audio)down,so it might be more
pleasant to listen to.In other words,it's a treble cut button. I haven't
ever used it except when I first got the scanner to make sure it worked.

From: n1kk@idt.com
Message-ID: <32526CAB.5F12@idt.com>
Source record: 221507

I just ordered a pager decoder for $19.95 kit or $29.95 built.
It uses the same software as pd-202.zip. I will report back on
my results. If anyone else is interested I bought it by calling
1-800-417-6689 and tell them you want the pager decoder you heard
about on the internet.
The software is suppose to be shareware.

Now if I can only find some shareware software for ACARS.

Moving around the province or just got that new scanner. Don't be
fooled by the frequencies that some people give you, be sure ! ! !
I have two of the latest lists of frequencies for Nova Scotia. From
2 Mhz to 23.4 Ghz. I can land mail a diskette, e-mail you the two
lists for only $10.00. Each list is about 1 Meg long (200 pages).
These lists are far better than those $ 24.95 Scanner Books out there.

Hey this is a great idea, the entire world has a soundcard. im tired
of the "box clutter" in my swl site and would love to trash the decoder
de' jour from aea. while ur writing the software,, make it for swl'ers
,, that is a dx'er's interface not a ham interface. so it needs hf /
vhf frequency storage with point and click interface on win 95,, use win
95 soundblaster drivers, support all modes with one program and
selectable interface including cw / fax / amtor / baudo, etc. have a
"signal acquisition mode" like AEA that's actually worth a shit.
automatic controls on freq shifts baudrate and bit inversion. automatic
audio level controls via stock soundblaster interface. hey,, u want my
$100 bucks up front?

The reason people are scoffing these radios up fast is their bullet-proof RF performance, not only for their cellular receive capability. I use my 2006 for mil-air monitoring exclusively. It's a fantastic scanner and it's a shame RS discontinued it. What it lacks in bells/whistles it makes up for in overall performance.

Andy

>> It seem someone did it during the Roddney King incident.

No, they did not. The messages were released by the LAPD shortly after
the incident. At that time my wife worked as a systems programmer
on the system that handles the MDT traffic (and many other tasks). One
of her co-workers was tasked with extracting all the relevant messages
from the log files. Yes, *all* MDT messages are logged, and backup
tapes are preserved for many years (10 seems to stick in my mind).

And no, I do not know anything about the workings of MDTs and their
communications protocols. Even if my wife knows, she would not
tell me.

Source record: 221270

CS>From: "CAD" <csi@rt66.com>
CS>Subject: Indoor/Apartment Antenae

CS>When I purchased a scanner about a year ago, I asked an Electrical Engineer
CS>that I worked with, how to make a good indoor/apartment antenae. I told
CS>him I was interested in listening to aircraft specifically (I live in the
CS>Albuquerque area, but the airport was about 15 miles away). He first sat
CS>down at his desk and started doing some math on a piece of paper. After
CS>that he told me to get some coax cable (RG 174/U) and a BNC connector
CS>(50ohm). Then he told me to strip exactly 23 inches of shrouding from one
CS>end of the cable, seperate the two conductive wires, and wrap the loose
CS>"ground" with what was left over from the shrouding. Then I connected the
CS>BNC to the other end. There was my antenae.

What you had when finished is a "coaxial skirted" vertical dipole.
The outer conductor, when peeled back and put over the outer
insulation of the coax, forms one half of a dipole. The now-exposed
inner conductor is the other half of the dipole. The length of each
half is, in feet, 234 divided by Frequency in MHz. For the geometric
center frequency in civil airways communications band of 118-137 MHz,
each half would be 22 inches. Since there is more comm towards the
lower part of that band, 23 inches is fine. I did that some time ago
using RG-58. The coax type doesn't matter, only the lengths matter.

It is a vertically-polarized dipole and the useful bandwidth is
limited to the civil airways band. It can work at twice and triple
and quadruple (and so on) the frequency but the angle of best
response at higher frequencies will be different.

This is rediculious!!
Do you think 'the public' buys scanners specifically to 'eavesdrop' on
someones (totally boring) private conversations?
Do you think an 800 Mhz ONLY scanner would sell?I dont!
I have had several devices capable of monitoring cellular calls and
have listened to maybe 3 or 4 before becoming tired of it.
If a scanner will or will not recieve cellular has absolutely nothing
to do with my decision to buy.
Am I alone in that I have no interest in listening to cellular?

That's an interesting concept. I haven't followed the entire thread,
but if the implication is toward the so-called "export radios", then
they are not legal to import unless there is a matching bill of lading
for export. That's how Customs looks at it, anyway.

As for cellular-capable radios....hmmmmm. Private use only?
Perhaps. I don't know about that one.

Bill

> reference in a credible book or magazine that supports your (stupid) statement.

It's YOUR silly contention that UV is the great destroyer of coaxial
cables. No one else whoops it up or speaks of it. You failed to
prove or support your opening contention. Don't put the ball in my
court until YOU introduce something of significance other than idiotic
drivel.

>> Like I said, RG-8, RG-8x, RG-59, RG-6, Belden 8214 and 9913 and many
>> other cables are well known to last 20-years or longer. The only

>NOT if they are exposed to sunlight, about 6 years is all they can take.

Where is your support for that drivel? I already told you I have 20+
year old coaxes out there laying in the sun......that are just fine.

>Can you even provide a single shread of documentation to support your
>statement rather than attempting to detract from the issue by cutting
>down ham radio again to help with your defense.

There's no cutting down of Amateur Radio. Just where ever or whoever
indoctrinated or inoculated you. Probably your Portland Area Rub-butt
Group (PARG), but do correct me if I am in error there.

>> Unless, of course, you'd care to state specifically what it is that
>> you think you know......and then we can deal with that. Otherwise, it

>> center conductor; and of course, the length of the cable.

>YES, & it is the insulation for the center that becomes violated
>when exposed to sunlight.

That all depends......but FIRST the outer jacket has to be exposed, and what I am trying to tell you is that the outer jackets of my 20+ year old coaxes are still fine. And about once a year, I run loss tests on my cables. They are all still well within spec.

>> Yes, Mr. Mackey, I am an engineer. You are a bedpan changer for a

>Funny how you HAVE NEVER been able to come up with anything to

Correct. I have several degrees. :-)

>no accreditating body, nothing.

Wrong. IEEE. ISA, APCO, RCA, NARTE, MENSA,.....and.....more.

> No wonder you come up with the
> bedpan changer idea, that is probably what you do for a living.

It is well known that's what YOU do for a living.

>No, actually, you stole the bedpan thing from Glenn Hansen because you
>are to lame/stupid to come up with anything original.

I didn't steal it. He investigated you and found out, and told me.

>Instead, you
>copy from others (sorta like how you always come up with scanner mods
>shortly after Bob Parness comes up with them).

Bob Parnass doesn't "come up" with scanner mods. That's not his line of work.

So what are the relative merits of plastic bedpans versus stainless steel bedpans?

Is anybody familiar with a cable manufactured by Chushcraft/Singnals
called ULTRALINK 93605 . A guy who installs 2 way mobile radios said
they use this on their base station installations and says it's better
and cheaper than Belden 9913.

>->
>- That manager seems to be fulfilling the Peter Principle.

He lasts "that long" because he gave up and fits in with
the RS attitude: pay cheap and reap those that need to be
told what to do with their lives....RS fills that gap.

People go into RS with an attitude. Once they go through
that "your address please"...after a Cash transaction...
well, it just pleases a lot of people to know that they
have an address to give...I just tell the inquisitioneer
that "I"M HOMELESS...don't know the address on my cardboard
box."

You can see their feeble minds trying to UNDERSTAND. You
know they have not been programmed with that ANSWER...and
their lights go dead and they look for the manager for
answers...that is why he lasts fifteen years...HE DON"T
HAVE THE ANSWER.

The subject is wrong. We were talking about scanners. Unfortunately, I
cannot change the subject line, without starting a new thread.

: Maybe one needs to claim import for private non-use?

Nope. Using the scanners is legal - just listening to cellular conversations
is illegal. Of course, I am referring to the stupid US law. Hopefully, most
other countries are more enlightened - although I know the UK has their own
list of restricted frequencies.

money@man.com wrote:

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me
I could make $50,000 within a month for an investment of only $5.

I started toying with the idea. But I shoved it aside because it was
all supposed to be a big scam. But even the risk is so small only five
miserable dollars !!

Two weeks later, I began recieving money in the mail! I could not
believe it! Soon, hundreds, and then thousands of dollars began to
roll in. Within 4 weeks, I had recieved a total of $32,445! It came
from everywhere in the world.
My bank account has changed its "-" into a big "+" (++++)!!!,I bought
myself a car and my relationship with my girlfriend really started
improving!

If you follow the three steps below, there is no reason why the same
shouldn't happen to you! This is a legitimate investment opportunity.
You invest $5, and you recieve a return on your investment. So does
the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY
LEGITIMATE.

If you are not interested, then don't participate, but please print
this article and pass it on to someone who may be interested, so they
can take advantage.

The procedure is simple:
1) Write your name and address on 5 sheets of paper. Below that,
write the words, "Please add me to your mailing list." Fold $1 note or
bank draft or money order in each piece of paper and mail them to the
following 5 addresses.:

1. Linda Lapierre, PO BOX 212275, Martinez, GA 30917 USA
2. Oleg Gorbik, 10834-97 St., Edmonton, AB, T5H 2M3, Canada
3. Christo van Zyl, 20 Hattingh Rd, Summerstrand, Port>
Elizabeth, 6001, South Africa.
4. Dan Allen, 419 Oley St., Reading PA 19601.
5. Ruth Ragan, Rt 3 Box 119A, Odessa, Mo. 64076.

2) Now remove the top name from the list, and move the other four
names up. In other words, #5 becomes #4 and so on. Put your name as

the fifth one on the list.Use a simple text editor such as Notepad,in your
"accessories" window (If you have MS-Windows),or DOS editor.In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many.Try posting to as many newsgroups as you can,and the bigger the newsgroup is,the more people are to see your message !

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym,call yourself "The Manager","The Boss"
,whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I recieved 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people= $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one
cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS,
AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?"Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five seperate dollars... ?

just think of all of the new Internet users that join the net every day
!!!

There are millions of internet users, and millions of new net surfers
every month !!!
This is the great plus of the Internet,people all over the world can
hear
you and listen carefully if you talk reasonably.Everyone will take
that chance !
I agree,If it wasn't the Internet,and was a small circle of people,the
chance wouldn't have been so small.the amount of money had to be 200
times
bigger,and the chances were zero.It wouldn't succeed.

But here,on the Internet,it is a giant village,where new thousands of
members join in every day ! you CAN'T lose
!!!!

Remember- read the instructions carefully, and play fairly. Thats the
only way this will work. Get a printout so you can refer back to this
article easily.

Try to keep a list of everyone that sends you money and always keep
an eye on the postings to make sure everyone is playing fairly. You
know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY.
YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!!

BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE
REASONABLE
AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD
MINE.

GOOD LUCK FOR YOU ALL,And remember,play fair and you'll win,I don't
want to mention what might happen to those who won't.

AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED
FOR A LONG TIME
..... !!!

Won't work, Win95 soundcard drivers will produce much too much
transition times between receiving and transmitting. You'll need
to write your own soundcard driver to do anything reasonnable
in the modem field...

>Foxtrot).

Executive 1 Foxtrot would not be the callsign for AF-1. The
"Executive One Foxtrot" denotes a civilian aircraft carrying the first
family, but not the president. Any military aircraft carrying the
president uses the callsign "<service> 1" (Air Force 1, Marine 1,
etc.) If I take Clinton sightseeing in a Cherokee (not bloody
likely!) I could use the callsign "Executive 1"

All this is set out in excruciating detail in the Air Traffic
Controller's Handbook.

A lot ... but just off the top of my head:

Receive signals not in the immediate vicinity of the receiver.

Demodulate AM and sideband mode transmissions.

Store frequencies in banks of memory locations and check each of them
periodically for activity (i.e. SCAN).

Add, remove, modify the contents of such memory channels as conditions,
licenses, interference, useage patterns change.

Seach between two frequency limits for activity.

>If I buy the Xplorer, I would be using it as my primary device.

Very poor choice unless your object is to find nearby new frequencies
but never listen to them once found.

Forgive me if this turns out to be a duplicate post, I haven't
seen my first one show up, nearly a week later.

I have a Radio-Shack Pro-42 I'm very happy with but it does seem
to be getting quieter and quieter. Replacing the NiCads with fresh
alkaline batteries helped a very small amount. Odd as this sounds, it
feels as if the problem might be the connection under the antenae or
volume switch.
Does this sound repairable, and if so to whom should I send it?
An e-mail response would be greatly appreciated.

Many Thanks,

Michael Jacobs

And that is reason for the communication being refered to here.
The baro-altimeter on board a plane uses the air pressure
gradient to measure the plane's altitude in reference to a fixed
point in altitude. This fixed point is usually "mean sea-level"
(MSL altitude). The pilot must periodically get updates to keep
his altimeter adjusted for changes in barometric pressure due to
weather conditions. "Atlanta altimeter is 2900" would tell the
pilot (as he nears Atlanta) that, given the current conditions
and Atlanta's actual altitude above sea-level, the correct
local zero setting for sea level is 29.00 inches Hg. It is very
accurate as far as measuring the pressure gradient, but must be
kept adjusted for the reference point. To measure height "above
ground level" (AGL altitude) they bounce radar off the ground
below, i.e. radar altimeter.

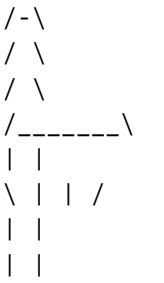
> Why not use what the military uses? A discone.

Whilst the antennas you may say on top of Military Control Towers etc may look similar to the commonly accepted "Disconne" you can by at your local RS I think you will find them a little bit different in particilar quite a bit smaller and "tuned" to the UHF frequencies.

The RAF & RN used to/still do use a "solid cone" type antenna that looked rather like a Clowns Hat than anything else. These were specifically deisgned for the 220-400MHz frequencies.



They were sometimes available at outlets that purchased suprlus MOD equipment and if you have a suitable Castle Wall to secure them to (They are very heavy) they work very well indeed but they are very heavy indeed. The story goes that the MoD later realised that they were worth more melted down for metal content than they 5.00 Pounds or so they were getting selling them as surplus.

When actually using a "Nest of Dipoles" cut for 220-400MHz or a "Disconne" I can only really say that with few exceptions feedback would suggest the difference in reception is considerable - in favour of the Nest.

However as with any antenna its impossible to say how well something will work for you in your location until you try it.

Actually, I read an article in a publication which stated that governments (fed, state, local) were going to put low emittance radars on vehicles which are for emergency, DOT, and public service use.

The reason for this is that there are millions of ppl with radar detectors in thier vehicles. The idea is to 'fool' ppl that there is a 'patrolman, or cop' in the area thus making the driver slow down to the speeds posted (usually 45mph during highway construction).

This is probably the demo that you stated that you saw. Lots of 'smoke and flash' when actually its just plain radar.

BTW, using a radar detector as a scanner.......pphhhlllbbbtt! 8-P I don't think so. Using a radar detector in conjuction with a mobile scanning setup gets the thumbs up.

Steer clear of those 360 degree radar detectors. Nothing more that a non-shielded detector case. Good ones are made of all metal constuction with a cone-collector exposed (which is then covered by a small piece of plastic to prevent damage). Uniden made some of the best lower-cost, all-metal detectors!

360 degrees is nothing more than a gimmick which promotes shoddily made radar detectors (a QVC specialty at the most!).

196. FS: RS PRO-2026 MOBILE CELL CAPABLE

Newsgroup: rec.radio.scanner
Date: 1996-10-03 00:00:00 UTC
From: bluedot9@aol.com
Message-ID: <530q79$a36@newsbf02.news.aol.com>
Source record: 221349

I have a Pro 2026 mobile scanner that is an "A" code. This means it doesn't have the built in cable but a DC jack (allows for home use). The manufacture date code is 11A3--which means that this is the most desirable version of this scanner. Please note that the "B" code version is not cell modifiable.

Item is new..from RS and is still in the original box, and is a VIRGIN in terms of modifications! You do the mod yourself or I'll do it for you. You be the judge.

Asking price is $180 firm.

Disclaimer: LISTENING TO CELL CONVERSATIONS IS ILLEGAL IN THE 50 UNITED STATES! I am not responsible if you get busted.

Shipping is ~$8.00 UPS GROUND--possibly more if out of USA.

Dave

PS. Two people have responded to this, the first one had a girlfriend that wouldn't let him buy it (!!!), and the second never showed thus placing the scanner on hold for almost a month.

Dennis:

Best thing to do is to drop by Ham Radio Outlet (Burbank or Anaheim) or Jun's (Culver City) and pick up a copy of one of the ham repeater directories. The ARRL publishes a couple of national editions, one as a pocket guide and the other mostly just maps and such. There are a couple of local publications as well.

You're not by any chance the same Dennis Smith I knew from Civil Air Patrol, are you?

>volume switch. ...

When the volume of a scanner is lower than it was when new, first
check for dirty contacts in the earphone / external speaker jack.

Then, replace the electrolytic capacitor which is in series
with the output of the audio amplifier. Deterioration of
this capacitor can also cause the audio amp to oscillate (howl
or growl) as the volume control is rotated further.

From the FAQ:

G & G Communications (telephone (716)768-8151) is a family
owned company which repairs scanners and stocks parts for
several older models, especially Electra/Bearcat and
Regency brands, but they don't sell manuals or schematics.
They are located at 9247 Glenwood Drive, LeRoy, NY 14482. |

For Sale: Universal M1200 Decoder Card. This is an 8 bit FULL SIZE card that decodes BAUDOT, ARQ-E, ARQ-E3, ARQ-M2, ARQ-M4, SITOR, SITOR-A, ASCII, and ARQ-6-90 RTTY modes on HF. It also decodes CW. VHF enthusiasts may decode POCSAG and GOLAY pager transmissions (where legal), amateur PACKET radio, and aviation ACARS, as well as decode CTCSS and DCS. This unit also decodes FAX transmissions from HF or SAT. Includes software. I'm selling this because I'm simply not using it anymore. Card is approx 2 1/2 to 3 years old, purchased from Universal Radio for $399.00. Will sell for $225.00 UPS COD shipping included. Please E-mail if interested (halligan@capecod.net). Thanks for reading.

Scott

MOST of the other organizations he mentions are the same way, just
write
a big check & you're in.

BUT, Bill has NEVER been able to offer a single shread of evidence to
prove his membership or certification with ANY of these organizations.
All he would have to do is give a certificate or membership number that
we could verify. He can't even do that for his FCC license, he says his
license does not have a number on it. Funny, my FCC commercial license
has a number on it & when I called the FCC they said EVERY commercial
license they have EVER issued has number on it.

Could Bill POSSIBLY be lying, oh perish the thought.

>idiot with nothing better to do...
>
>-- Scott --

You must have a bad attitude. It's rather insulting that you
alone know what is best for this group-input status.

People who have to deal with RS androids need to know. And they
come to the group with help on their minds. They cannot come
to a RS without a major Anxiety Attack...we provide that help.

We help theses people "cope".....RS is an experience no one should
miss in their lives, but there are those that get these attacks
prior to "opening the door".... we give them hope by letting them
read past clients who have been "harmed" by the RS experience and
how we got throught it.

These are what is called: Socially Redeeming Acts of Love.
To insist we stop helping our fellow man get through this
vile and emotionally draining experience in a RS store is to
condemn humankind to stupid pet tricks-like service when
a catalogue is needed.

Allow LOVE to happen and just go away MAD.

People who survive the RS experience able to help others who
have trouble coping is a very nobel act of LOVE. Let Love
live in this group. Quit being so "hateful". It takes too
much energy out of one.

Peace.

bill

>regardless of what type of coax you use.

Radio waves travel about 300,000,000 meters per second (about 984,069,000 feet per second) in free space. For a 1/2 wavelength, you will need to take 1/2 of 984,069,000 fps, giving 492,034,500 feet per second. In reality, in the earth's atmosphere, a 1/2 wavelength is slightly slower around 468,000,000 fps. So, for the aircraft band, take 468,000,000 and divide it by 121,500,000 (airband emergency freq), which gives you 3.852 feet for a 1/2 wave dipole. 3.852 feet is 46 inches, which is why your buddy told you to use two 23 inch sections!

Make sense?

Looking for people who have made and or use equipment to receive and decode the weather data from the NOAA satellites.

I would like to know what is good (in the low price range) and what is not. Mostly I would like to build as much as possible but would love to find ready may PC boards. (If such a thing could be found!)

I am not interested in the HF WEFAX. Thanks for any help.

Has anyone attempted to modify in anyway the RS Pro-2037 Scanner?

I have just ordered the "service manual" that i hope has schematics and will soon try such things as adding more memory channels. I should not have any problem doing that if the memory chip is separate and identifiable... If it is part of the CPU then I'm cooked. I will also try the so called vertual down conversion method of getting the cell band to work but that will leave me with 12.5khz steps I would think.

On the outher hand if I have to I will make an external down converted and that is easy but some what expensive.

So far I like the radio and the fact that it is tripple conversion and otherwise covers all the bands I like it was a nice radio for the price. (it was on sale here in Canada)

Looking forward to other comments on the radio from others...

Kevin

>PRO-51, the 2037 sounds like the same circuits but in a larger case.

I have a new 2037 and I like it very much. Have not found any mods
(and I have looked hard!) but I plan on doing some my self ie. a
computer interface. The interface will use the keyboard interface
inside the radio. It will allow me to upload new blocks of frequencies
into the memory, not much else but it beats entering them each time I
go on the road. 200 channels is not enough for me here.

<<SNIP>>
> Now the "baseband audio"
> signal is handily available for recording, processing, or whatever

BUT- You should also be aware that this "basband audio" is unfiltered,
meaning that has probably not been thru a "de-emphasis" so the
audio will have a skewed affect untill it goes thru de-emphasis, which
most line-in connections have. Also, the baseband audiomay be
unsquelched
audio as the discriminator is un-squelched.

> the numbers on 1st Phone tickets. They don't mean a thing.

Oh Bill but those numbers mean a lot, you can confirm the authenticity
of a FCC commercial license by the license number.

OF course, we know you really don't have a commecial license since
you are qouting your license as being a "1st phone ticket" & those
have not been issued in over 10 years & are now considered null
& void by the FCC because they replaced that license with
the "General Radio-telephone" license. (Commonly called the GROL).

> On mine it is in the extreme upper right corner of the license.

OK so what is it?

> >actually ever had one to begin with AND kept it current AND it was not

As I have told you before, I never bet or wager. I wish I did I would
be a millionaire off of you my now.

> It's posted in a clear, open space here in my Lab where zillions of
> people have seen it over the years. It is well supported. Now you
> support me with a nice wager and we'll get down.

No, if you don't desire to support your statements then you don't
have to. Mean time, we just go with what we know. That being you
claim to have a license that became null & void over 10 years ago
& can't even produce any proof of that.

> I don't lie, Mackey. Don't need to. You certainly seem to have a
> problem with truth, though. Kind of sticks in your gullet.

Then maybe you are just so disoriented from the truth that you
no longer realize truth from lies.

Thanks for your input.

In the 50 Ohm world, rg-213 & rg-214 are the
only ones that are safegarded against UV exposure. Bill Cheek
is argueing that there is no such issue as UV exposure problems
with coax.

>can hears is CHEETTTTT.

Well, there can be a number of reasons. My Cobra sr15 did this about 8 months ago after 8 years of service. The radio searches, scans, accepts programming, but never breaks squelch.

I placed the radio next to my counter, and cound not pick up the local oscillator. Before, when it was working, I could count the local oscillator by placing the antennas of the scanner and the counter next to each other in an rf quiet environment. Soooooo

I suspect the local oscillator is fried. Same happened to a friend of mine with a COBRA. Bummer is that I called cobra and they will not service it. They did send me a shcematic, but I'm not to good at working on surface mount techmology.

You could try the same test, if you have a counter, or a second scanner.

Im looking for a cheap source of crystals for my bearcat scanner.

Its an old 8 channel scanner I picked up at a garage sale for (believe it or not, 50 cents). Got it working too. I'm trying to get my dad into the hobby with it covertly, by sticking in some police freqs.

Anyway, Radio shack crystals are special order for 4.99 or some such, and a buck shipping. I was pretty disappointed to learn that jan crystals are even more! 10$ per crystal.

Anyone have any other sources?

Please carbon copy reponses to pollojv@thewolforganization.com

In a word, Yes.

Aircraft altimiters have a setting where, if you dial in the correct barometric pressure for your location, the altimiter is supposed to show your correct barometric altitude. (NOTE: not necessarily the same as your altitude above sea level)

When the controllers tell you, "Atlanta Altimiter is 2990," they mean that if you're planning to land at Atlanta and you set your altimiter to 29.90 inches, then when it's dial is shows the published elevation of the airport, your wheels should be approximately on the runway.

I am looking for a quality scanner
(other than the AOR 8K)that can
be computer controled with a
price tag under $700.Does anyone
know if Yupiteru plans on including
computer control interfaces with
any of their future models?I
have seen some info on new radio
shack models that have this feature
,but are they really high quality
products?Please post or e-mail me
with any info that you can provide
on this subject.

Thanks,
Joe

>reference in a credible book or magazine that supports your (stupid)
>statement.
WWhy don't you tell us, John. Since you seem so keen on the point...
However, lt me wet this one with some facts.
Fact, most cable (including the "cheapy" brands) will survive the weather nicely.
Case in point: I live in an apartment complex in which cable was installed as a refit about 5 years after the buildings were put in. Some of this cable is routed outside (most of that being on the roof). This cable has (for the most part) performed without severe loss, in weather that is normal for the Arizona desert, for almost 15 years! The cable was the usual brand of 75 ohm stuff that is cheap. the jacket was brittle (due to exposure to the sun) but otherwise whole and unbroken. Explain how this could be john..... This type of cable did NOT have the uv protected sheathing you desribe, and worked nicely in some of the harshest natural conditions for 16 years (until replacement this last year). Most of the cable was in remarkably good shape, considering the conditions that it was used in (average temp on a roof in the arizona desert often exceeds 150 F).

>NOT if they are exposed to sunlight, about 6 years is all they can
>take.
Read above and say that again....

>Can you even provide a single shread of documentation to support your
>statement rather than attempting to detract from the issue by cutting
>down ham radio again to help with your defense.

Granted, UV protection can extend the life of certain tyes of cable (prevent the sheathing from decomposing under adverse conditions). However, your case seems to demand extremes that can't possibly exist outside of a lab. I was into CB in Phoenix for almost 15 years and used the same RG-8 cable on the tower for most of that time. Given the connectors were checked periodically, I had NO problems with that cable (its the black sheath). It withstood temps as high as 150 F (on the roof in direct sunlight) in the summer and cold stuff as low as 10 F in the winter (which is rare, but has happened) at night. I had said cable tested when I removed it from service, and it was still viable (a little more lossy at 27 MHz, but not much). The rating on it for 30 MHz was less than 1 DB/100ft loss (new) and what was measured after 14 years was just over 1.2db/100F for the cable I had (and it was just over 120 feet long!).

>heheeheheh bullshit.
Cows do it too, John, but they don't brag about it.......

>YES, & it is the insulation for the center that becomes violated
>when exposed to sunlight.

This only happens if the outer sheathing has decomposed significantly. As stated above, I have dealt with 2 types of cable oever a long period of time. These could be considered "real world" tests for all intents. If you don't move the cable much over time, it won't develope cracks in the outer lining near as fast. It is true that weathering effects (like heat/moister/cold) can degrade the performance of coaxial line. However, if properly treated, that line can withstand a full decade of the worst that mother nature can offer.

>Funny how you HAVE NEVER been able to come up with anything to
>support your status an an engineer. No fcc license, no degree,
>no accreditating body, nothing. No wonder you come up with the
>bedpan changer idea, that is probably what you do for a living.
He has done plenty. Why don't you read his books (he has published at least three). I have checked. I found some people who actually confirmed that Mr. Cheek is a respected member of the local IEEE in his area. Besides, you have done so much accusation, that the burden of proof lies with you. In this country, you are innocent until proven otherwise. You have NOT proven Mr. Cheek to be a liar. You have, by your own statements, proven yourself to be a loudmouthed "wannabe" with no real sense of the larger scheme of things.

>No, actually, you stole the bedpan thing from Glenn Hansen because you
>are to lame/stupid to come up with anything original. Instead, you
>copy from others (sorta like how you always come up with scanner mods
>shortly after Bob Parness comes up with them).

Hmmm, hate to say this John, but you are attempting to divert the point. Have you even considered the possibility that Mr. Cheek and Mr. Parnass can exchange (or compare) notes? Most good professionals know that they do not know everything about their profession. This is why they join groups like the International Electrical & Electronics Engineering union (IEEE). I don't even feel that you considered this at all.

Basically, to make a long point short. John, you are a fool to persist in this useless arguement. Please shelve it. I think I have made my point.

John,

You have asked a great many different things of Bill. Just right now
the credentials
seems to be the pet peeve of the month for you. At times its the
material in his books.
OTher times it is his technical knowledge. You claim he stole it.
Prove what you have to say.

What does a government certificate mean anyways. Do you put that much
faith into the
the US government, that if they do not give the approval you will not
belive anything.
Damn, this is not WW Germany or Russia.

Grow up, Get a life, and get back to scanning.

> What kind of an answer could I give "I will clean your clock"??

John,

If you can clean his clock do it! Otherwise shut up.

It may have been the scanner that looks like a Radar Detector! Some major manufacturer builds a device that looks broadcasts from the mobile extenenders that are used to transmit car calls from police cruisers to the portable and vice versa. It works much better than RDs when it works, because mobile extenders transmit omni-directional around corners and over hills. Virginia State Police uses 458.350 mhz and it works for about 1/2 mile or so on my 2006 a cheap ant.

Hi Raymond,

you may want to try sending an email to <eeb@access.digex.net>

This the email address for EEB (located at 323 Mill Street in Vienna,
VA.
The EDCO people share the same build and I'm sure some at EEB could
relay the message for you. (EDCO is located at 325 Mill Street)

You could alway give them a call at 703 939-4526.

Bob

In fact, these exact same radios were going to be sold at $225, but that
seller was outbid by the current seller in the auction they were sold at.

73,
Todd
N9MWB

PS I wish the current seller didn't feel the need to post his ad
every day. Once a week would seem to be adequate.

I know its a bit late to ask about this but Kemp is visiting my school tomorrow and I was wondering if the secret service would be in tow. If so what freq.'s would be used. BTW He's visiting University of New Haven, Ct. so if anyone has freq.'s that anyone else would be using in regards to his coming to town please let me know.

Also, what freq.'s would be used during the Debate in Hartford?

269. Pager decoding

Newsgroup: rec.radio.scanner
Date: 1996-10-03 00:00:00 UTC
From: ethyl@keynetcorp.net
Message-ID: <52unuj$o1r@news.kis.net>
Source record: 221457

I am looking for a program that decodes pager messages. I've seen the POCSAG software, but I don't have the interface cable to hook up to my computer.

Someone told me that Motorola makes software that all you have to do is plug your scanner headphone output into your soundcard input, and with the correct frequency, it decodes the transmitted data.

Does anyone know of this program? Or have one that is simular? I really don't want to spend any money, if I already have all the nessesary equipment.

Please let me know,

Thanks.

In article <51fk5h$1tq@newsbf02.news.aol.com>, racer0069@aol.com says...
->
->Way to go ! ! ! I worked at Radio Shack for almost 3 years and for the
->most time really enjoyed it. "Most" of the customers were very nice, but
->then again, you've got the people that just won't be happy unless they
->give you a hard time. My manager has been with the company for over 15
->years and to this day, I can't see how he's lasted this long. Why do
->people continue to go back to Radio Shack if they have so many gripes and
->complaints against them!
->
->Glade to see more POSITIVE Radio Shack input here !

Your manager has been with Radio Shaft, due to his inability to do anything else.

If you ever find out any other reason for him staying that long, please let us all know.

People go back to Radio Shaft, cause they happen to have that 1.4K ohm resister
that Safeway, just happened to run out of. Either that or Barnum was right..

I find the only POSITIVE comments about the shaft come from droids or silly
confused managers.

Ima

271. Re: Radio Shack's 1997 Catalog Policy

Newsgroup: rec.radio.scanner

From: Ness@lynkers.com
Message-ID: <32532243.0@news.iea.net>
Source record: 221459

In article <51fk58$1ti@newsbf02.news.aol.com>, racer0069@aol.com says...
->
->Actually, Radio Shack isn't being silly about the catalog issue, the
->customers are! And, if you don't like being asked your name and address
->OR paying 2.95 for a catalog, then shop somewhere else ! ! !

Brilliant attitude. You can ask away, and as long as I am paying cash,
you can kiss my ass. Any you dear dipshit droid type dumb ass, can keep your
2.95 catalog for emergency T.P.

love to all

Ima

272. Re: Radio Shack's 1997 Catalog Policy

Newsgroup: rec.radio.scanner
Date: 1996-10-03 00:00:00 UTC
From: Ness@lynkers.com
Message-ID: <3253229e.0@news.iea.net>
Source record: 221460

In article <51fk5b$1tj@newsbf02.news.aol.com>, racer0069@aol.com says...
->
->Bitching to the employee about a lousy 2.95 catalog. That doesn't
->accomplish a thing!

Makes me feel better. The reason Radio Shaft can't afford to give away a
2.95 catalog, is because that would represent 2 hours of droid pay.

Can anyone out there give me some help trying to locate the new frequency(s) for the Jersey City Medical Center. Understand they may have moved to a 900Mhz system but have had no luck trying to find it. The new ScannerMaster still lists the old system frequencies. Thanks! You can E-mail me at TLink94222@aol.com.

Gees, I was hoping that this would have ended when I checked back after getting through my comps. However, I am happy to see that the lurkers in this group have decided to stand up and say something about it all.

By the way, looking back on this thread, I noticed that in one place, Bill stated that he would be willing to prove his credentials if Mr. Mackey were willing to make a bet on it. (Did I read that post correctly, Bill?) Mr. Mackey continues to insist that Mr. Cheek has no credentials. Not willing to take the bet, John? At any rate, that seems trivial to me. Bill's credentials are available to anyone who cares to look. It's called success. If he were stealing ideas from Bob Parnass, I suspect Mr. Parnass would have had something to say about it. I also noticed that Bob has been terribly quite during this whole thing. I assumed that he had no desire to get involved. Why involve him? Anyway, it seems that Bill has more support than anyone counted on, and as one who supported him from the beginning, I am glad to see it. Maybe I'll stick around this time....

This is directed to current owners of Pro-2037's. I just bought one yesterday and I am wondering if mine is acting correctly. I can't pick up anything between 896mhz to 920mhz. I have a Pro-51 that picks up lots of stuff in that range.

Does the freq 121.5 give you static? Like a mini birdie that adjusting the squelch does not overcome. When scanning it just stops right on that freq and won't go again unless I lock it out. Heck, its the aviation emergency freq. and I listen to it on all my other scanners.

Ken:

Santa Barbara County is still on 153.770 as the main dispatch
frequency. It is called "A1" when in the repeater mode and "A2" in
simplex. Tactical freqs are:

153.905 A3/A4 repeater/simplex
153.980 A5/A6 " "

They have repeaters on Santa Ynez Peak and Santa Cruz Island so there
should be no reason why you can't hear them in Ventura.

I have a Pro 2006 that I bought from Radio Shack 3 years ago. I have harldy ever used it in the last 2 years. What do most people use this radio for? I mean what are the frequencies that are good to listen to?

Also, I read on the net somewhere that there are modifications I can do to this scanner that will expand it's frequency range. Should I do this? and is it difficult. I don't want to mess up a good radio if it's not broken. But any advice would be greatly appreciated.

Also, at the time I bought this radio in 1992, I got it because I wanted to get the best. Are there any better radios out there today than the old Pro 2006???

For sale, Icom IC-R1 handheld scanner. Worlds smallest scanner.
This came from Japan so is wide open to 1.2GHz.
- Full user manuals in English and Japanese.
- Built in clock and sleep timer, backlight, NVRAM, etc.
- Brand new internal ICR1 NiCd ($60), no memory effect.
- Extended battery pack with NiCd and Li AA cells for days worth of
scanning without a charge.
- AC adapter/charger and 12V car cig lighter adapter/charger
- 2 different antennas - tiny Diamond antenna (5cm) makes the package
extremely concealable.
- Mint condition, never dropped.

Price US$475, will pay shipping for COD in the US.

Contact zarko@zarko.com, or call +1 408-774-4222.

I'm moving to the Peoria/Glendale AZ area, and I want to get "plugged-in"
to what is happening of interest in the west valley.

I'd appreciate any normal (FD/PD) as well as unusual freq's.

Thanks very much,

Steve

Most of the newer McDonalds in my area are on 469.0125 for the speaker
and 464.0125 for the headset. The older McDonalds still operate on
the following:

Speaker Headset

35.020 156.600
154.570 170.245
154.600 171.105

I did. I guess you didn't read far enough, considering that you didn't want to hear this news anyway (being that it would affect your CE(hb?- 232 Kit sales).

I also won $5 (yay!!) on a bet that you would flame my post. You are so predictable.

I will be posting the results of _my_ modifications when I find a cost effective and aesthetically-pleasing way to perform this mod using nationally available parts (like those found in Digi-Key or Mouser catalogs and using the OS-456 OPTOELETRONICS board).

This will make assembly easier for those not mechanically inclined.

Part numbers, specs, and schematics will be included plus a review of performance, and compatibility issues.

If you would like to try this yourself (highly encouraged)...the information I received from OPTOELECTRONICS INC. is listed below:

Dave,
Thanks for your email.
You spoke with me yesterday about this. Here's the scoop.
Technically speaking, the OS456 will work with the 2004. However, it does not fit in the 2004 like it does with the 2005/6. In addition, the wiring harnesses that come with the unit are not compatible with the 2004.
Now, if you want to try and determine how to fit the two boards together (see wiring harnesses) then you will need to do that on your own. We don't

have that information. Be advised that the board itself does not
physically
fit into the 2004. If you can get it wired together it will work, it's
just
that the board will be hanging out of the 2004.

Sincerely,

Kevin Cox

Great observation!

I should have stated to steer clear of lower cost radar detector units
utilizing the 360 degree method.

319. Mobile scanning antennae - recommendations?

Newsgroup: rec.radio.scanner
Date: 1996-10-04 00:00:00 UTC
From: "Barry Burke Jr." <barry_b@snet.net>
Message-ID: <3256029D.1165@snet.net>
Source record: 221257
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Does anybody have any recommendations for a good mobile scanning antenna?

Here's my needs - Mostly UHF public service monitoring, except for my state's PD which is STILL on VHF-lo.

Also, This antenna will be going on a brand-new pickup, so I'd rather NOT drill holes in the sheet metal
to mount it. I'd really like a non-marking mag mount, or a glass mount.

Last question, are the glass mounts ANY better than the better rubber-duckies? I don't want to spend
the bucks if I'm not going to see much of an improvement over a set-mounted antenna.

This is for a BC-200 & Pro-2006

Thanks,

Barry Burke Jr.

323. Re: Frequencies Needed for Charles County, MD.

Newsgroup: rec.radio.scanner
Date: 1996-10-04 00:00:00 UTC
From: j4dice@li.net
Message-ID: <5344p3$908@linet06.li.net>
Source record: 221261

In article <3254a3e4.1141019@news1.radix.net>, mathtutor@radix.net says...
>
>Could someone give me all the frequencies for Charles County Police,
>Fire, Rescue, County Government, Federal Government Stuff, Etc.,..?
>Thanks,
>AP Math and Music Instruction
>From Arithmetic to College Level Mathematics
>
>See My Homepage:
>http://www.radix.net/~mathtutor

Check out http://www.li.net/~j4dice/stateidx.html for freq. lists for most MD counties.

Jim

324. Syntor CH programming Problem

Newsgroup: rec.radio.scanner
Date: 1996-10-04 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-ya023080000410962032160001@news.TheRamp.net>
Source record: 221262

Sorry if this is a bit out of context for this group, but I don't know
where else to look:

In programming a fleet of Motorola Syntor X9000's (with the Alpha-Numeric
control heads) I have no problem cloning the radio itself (with RDPROG) but
the "CHPROG" (Control Head Programmer) will not allow one to read in a file
or clone control heads. It gets real tedious to type in 32 channel labels
while sitting at the trunk of a squad car, and then doing it for 15
different cars... This also makes for inconsistent labels and mistakes.

Is there a trick to this? Has anyone else had this problem?

Thanks in advance for any help!

325. E-mail address for E.D.C.O. Please

Newsgroup: rec.radio.scanner
Date: 1996-10-04 00:00:00 UTC
From: Radioman@localnet.com
Message-ID: <531l82$q9c@prometheus.localnet.com>
Source record: 221273

Looking for the E-mail address for edco in Vienna Virginia, please. If anyone has this, please pass it along if you can. A general one is fine, but if you have the specific one for the AOR representative stationed there (Mr. K. Ochina) that would be great. Thanks a lot
Regards, Ray Miller N2NJK

```

Thanks Bill,

You put it all in the proper light.
Perhaps a newsgroup called alt.radio.shack.survivor would be in order.

This group would allow proper venting of the bull shit, NAZI like treatment handed out to any RS customer. I admit that I too will wonder into a RS store in search of something to complain about. RS never lets me down, and won't let you down either.

It has to be a S&M thing. Radio Shaft managers actually put in 60-80 hour weeks and earn up to 40K a year! Droids make less than a burger flipper at McDonalds! Could this be why we see such "special" people working for Charlie Tandy? Could this be why RS employees are so great and telling us to take it or get the hell out?

When a droid asks you for you name and address, simply say, "YOU FIRST" when/if he/she/it asks "why?", tell them you always collect this information from total strangers so you can send them a Christmas card.

If he/she/it refuses, then I would think you would be on safe ground to "just say no" yourself.

Love from Ima

I am looking for a quality scanner
(other than the AOR 8K)that can
be computer controled with a
price tag under $700.Does anyone
know if Yupiteru plans on including
computer control interfaces with
any of their future models?I
have seen some info on new radio
shack models that have this feature
,but are they really high quality
products?Please post or e-mail me
with any info that you can provide
on this subject.

Thanks,
Joe

This is a bunch of (B.S). Even if UV destroys the outer insulation, so what.

The cable is made up of an inner conductor surrounded by something like "ground braid material". The distance seperating these two conductors determines the impedance of the cable and this distance must remain constant throught the lenght of the cable itself..

All the outer insulation does is to cover up the cable and has nothing to do with the characteristics of the cable itself.

Now if the outer insulation is gone, yes the cable is more suseptable to wrinkles, "kinks", and other distortions and this will cause you problems. At these deformed spots within the cable the imedence will be slightly different because the distance between inner and outer conductor would have changed.

I've stated my peace.....UV is B.S.

>PRO-51, the 2037 sounds like the same circuits but in a larger case.

Tim,

I picked up a 2037 last year on sale and have been very pleased with
it. Works well with my simple external antenna. 25 channels/sec
description seems accurate and very adequate under most circumstances.
I like the button layout and feel. Display is fine also. Top-mounted
audio has plenty of sound. I think this is basically the base model
of the pro-62, not the 51. Triple conversion on the 62/2037.

Source record: 221283

Here is an interesting phenomina regarding the frequency coverage of the RS Pro-2030. I found it to be somewhat limiting. The NY State Police have an 800 system that they use in NYC called the "Metro 21" system. When I went to program the 1st 4 frequencies I was rudely awakened to the fact that they were outside of the programming limits of the Pro-2030. The frequencies started at 868.9875. If I remember the pro-2030 wouldn't accept above 868.9375.

In any event, I solved the problem by programming it into my bc-9000 which accepted all the freqs.

I called no one any names. The "jiggle" was a reference to Cheek's
"technical" description of zero-beating.

I'm "joining" nobody, so I suggest you just stay on the sidelines
unless you have something productive to offer.

My beef with Cheeks has nothing to do with any ongoing flame wars
here, and I don't intend to start taking any sides in them, either. I
call 'em as I see 'em, just as I did with the coaxial deterioration
topic, which basically was in agreement with what Bill said. He's
right most of the time, but when he's wrong, he won't back off, and
then the fights start.

If you really want to put the poor slob in a tight position, print out his message and send copies of it to the manager of your local post office and to your local IRS office (assuming you live in the same country as the person who posted the message).

I've heard that being audited by the IRS is a highly educational experience. *evil grin* :)

In the USA, this scheme is: Chain mail (US Federal violation),

an unlicenced gambling racket that crosses both US State and national borders (US Federal violation),

Not declaring any money you make from this scheme is tax evasion (US Federal violatiion)

possibly also paticipation in an interstate/international criminal conspiricy (US Federal violation)

possibly mail fraud (US Federal violation)

Sunlight has an affect on the type of dielectric for the insulation
material
which would also have a serious affect on the impedence. It is similar
to a
chemical reaction.

> Now if the outer insulation is gone, yes the cable is more suseptable to
> wrinkles, "kinks", and other distortions and this will cause you problems.

Then with the outer insulation gone it could be violated by water also.

> Steer clear of those 360 degree radar detectors. Nothing more that a
> non-shielded detector case.

The Valentine V1 is a notable exception. It actually has two feedhorn antennas - one facing front and a second facing rear. In addition, it has photocells (as do many others) facing both front and rear for laser detection. This is one of the reasons that the V1 consistently scores 1st in credible comparison tests and sells for $400.

But if the altimeter is kept adjusted for weather conditions, it
will read mean sea-level altitude. The pilots must know their
MSL altitude (among thousands of other bits of trivia) in order
to follow FAA flight rules and controllers' instructions.

>
> When the controllers tell you, "Atlanta Altimiter is 2990,"

runway.

Yes, and working backwards from that statement: the
baro-altimeter is reading the correct altitude MSL.

Of the 39 messages I downloaded from this newsgroup this morning, 1/3 were of the "Bill Cheek is a jerk" or "John Mackey is a jerk" variety. Up until now I have tried to avoid wading into this mess.

Mr. Mackey, I don't know you from Adam but it seems like you are an intelligent human being who is knowledgable about various aspects of the hobby and have something to offer this newsgroup other than "Cheek bashing".

While I don't know Mr. Cheek personally I have been in attendance when he came on the Scanner Conference on AOL and found him to be a heck of a nice guy and quite willing to share his knowledge. I have perused two of his books and found them to be well written and very useful. I really don't give a rat's rear end about his credentials since he has yet to steer me wrong.

That being said I can only think of how great this newsgroup could be if you two would be content to simply share your knowledge. Spirited debate, such as the one you two have had over the length of time coax can be used, is great. What is disconcerting is the name calling, accusations etc. I know Mr. Cheek has said in the past he'd be willing to cut it out if you did. I assume that offer still stands.

The cheapest way to get started (if you already have a 137Mhz receiver
with a sufficient bandwidth...) is a shareware program called JVFAX7
it uses a simple op-amp homebrew interface that connects between your
receivers audio out and your PCs serial port. The software will
decode/display APT transmissions from NOAA and Meteor series sats.

For more advanced monitoring try Quorum Communications, Irving, TX.
I've been using their WEFAX Explorer PCA (NOAA,Meteor,GOES) for about
three years now, with great success.

The following is my response to J. T. Wards article in the November issue of PopComm., . , . , . ,

I read with interest, the column by J. T. Ward in the November issue of PopularCommunications. His premise of the government banning scanner radios is not all that farfetched. After all, they did in the UK. And judging the present political climate here in the US, laws like this are not only possible, but are probable. Look at the cellular ban, the "V" chip, and the Computer Decency Act (Which was declared unconstitutional). Orwells predictions of "1984" didn't quite come true, but we are getting there. I disagree, however, with the proposed olution that J.T. suggested, of turning to the ARRL. There are several things wrong with that. Some would equate this move the same as registering guns. Now the government knows where the scanners and scannerists are. They can come and get them any time they want to. The Turner Diaries describes what can happen to our society when the government comes to confiscate guns, and they just as well could be confiscating radios as well. They did this in WWII. They effectively shut down all of the Ham radio Operators for the duration, and in fact confiscated radios. Secondly, and more important is the fact (at least in my mind) that the ARRL is a bunch of stodgy old timers that are still stuck in the nineteen thirties. I equate them with the unions. They wereeffective n their time, but failed to change in rapidly changing times. The ARRL shouldhave had some effect on the cellular ban, but where were they?

I don't consider myself a pessimist, however, in my opinion, the only answer to this problem is not turning to another bureaucracy, but rather a strong letter writing campaign to our Congressmen and Senators. I know, they are part of the problem, but if enough people point out where the votes come from, maybe they will soon get the idea.

> O> mobile freq, in another pair was a base freq.

Yes, I know; I was monitoring ALL of the 42 MHz freqs. I don't use the "pairs" any more for CHP, I just have all of their channels in the scanner.

> San Diego CHP has moved to a full duplex system...
> All mobile traffic is now heard on the base freq.

> Orange-1 39.400 base 42.660 mobile (San Diego)

That's what I thought at first, but as I said before, the traffic on 42.66 does not seem to correlate with what I hear on 39.4 (having a scanner on each at the same time).

376. CFS & CFJ Murata ceramic filters

Newsgroup: rec.radio.scanner
Date: 1996-10-05 00:00:00 UTC
From: hi80@pipex.dial.com
Message-ID: <3256e419.3197544@newnews.dial.pipex.com>
Source record: 221124
Cross-posted to: alt.radio.scanner.uk,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,sci.electronics.repair,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Does anyone know of a supplier of the full range of CFS or CFJ Murata filters, preferably in the UK? I know Cirkit sell them, but their range is limited; the narrowest one they sell is 1 khz, while I am looking for 300hz or 500hz. I would also like to find a supplier of Collins mechanical filters and Hy Q or similar crystal filters. Again, I know these are sold by manufacturers such as AOR or Kiwa, but they seem to rather more expensive than they should be, as they are sold as spares or accessories for their products.

I intend to replace some of the filters in my NRD535, so if anyone has the replacement Crystal filters for the 535 at a good price, I may be interested. I have a 1.8khz filter for the NRD that I would like to exchange for for the 300hz, 500hz or possibly the 1000hz.

Finally, I am looking for a design of a loop antenna similar to the KIWA MW loop. Unfortunately, I can't possibly afford the 350 UKP price of the KIWA, much as I would like to buy it, so building a similar design(balanced loop with DG Mosfet amplifier and bandwidth control) is the only alternative. Has anyone built a design by GF Maynard called the "WQ medium wave loop". This appeared in the UK "Shortwave magazine" in November 1986, and looks very impressive. However, the construction is VERY complex, so I would like to gather any opinions before starting on the project myself.

TIP FOR UK LOOP FANATICS:
Any experimenters with loops might like to know that ARGOS sells a product called a "TV Turntable" for around 7UKP, which is perfect for mounting a rotating loop, especially if it's completed project and a smart appearance is needed. AFAIK it is only available at ARGOS superstores. I have had difficulty in finding very wide diameter plastic pipe(12 to 24 inches) or something similar, again for loops. Any ideas?

Regards,

Joe Kirlew

He's so fond of accusations of lack of candor. But never mind that I succinctly told the imbecile that my license number was in the upper right corner of the certificate. He misconstrues anything you say to suit his purposes.

But then what do you expect of a hospital bedpan changer? Lack of candor among other things.

:-)

amazing bob, how did you now that ? ;-)

the analog system CT0 is, still, very popular in the netherlands, because it's extremely cheap.

the analog system CT0 has 12 channels, frequencies are 31.0375-31.3125 base, 39.9375-40.2125 handsets, step 25khz

the analog system CT1 has 40 channels, frequencies are 959.0125-959.9875 base, 914.0125-914.9875 handsets, step 25khz

the analog system CT1+ has 80 channels, frequencies are 930.0125-931.9875 base, 885.0125-886.9875 handsets, step 25khz

hope that helps.

I always wear a vest. I am an NYC stringer up until a month ago when I "went west young man". I have yet to do anything for the Merc, much of my photos are documentary on fire/rescue, ie:I ride with EMS or the PD in the problem areas, where a vest makes sense. Parts of San Jose it is needed, I have yet to go to East Palo Alto with out one. I spent my last few years as the tall white guy with a camera in some of the nastiest housing projects in New York City (home, and home again soon).

As for bylines, I have 5 years worth of bylines with the Associated Press in a number of bureaus and 2 countries, New York Newsday, Newsday, New York Times, New York Post, New York Daily News, Boston Globe, Boston Herald, sold shots through 4 news agencies and indepenently to Newsweek, Mosby, Evening Standard (London), Akzo Noble (Netherlands) and many other news outlets.

On the other hand, I have needed a vest 3 times without one on, not biggie, and 7 times withone on (at one burst, big problem).

If you want I can e-mail you some pix :-)

Why? Just because they still support the
inclusion of one-hundred-and-fifty-year-
old technology (Morse code) as a requirement
for higher ham radio licenses?

I'm still waiting for the arrival of the 10/96 issue of Monitoring Times here in CA to read Bob Parnass' review on the 2046! What did he say about it?!!! I had in mind to purchase the scanner this weekend if it was really worth it, but wanted to read the news first. Did Bob compare it to the previous Pro-2026? What's briefly the final recommendation?

I would appreciate newsgroup postings or direct Email on the subject from people on the East coast or the Midwest who already received MT or have some "personal" knowledge regarding the 2046's performance rating.

Thank you.

I picked up premade boards at Dayton for an APT decoder that works with JVFAX.
I've got them mostly populated, but have to work on the case and get a few
more parts. The article is in the March 1996 QST, p35. Towards the end is
the address for a circuit board supplier, FAR Circuits.

Good luck.

: Wrong...because the public would not buy them if they didnt pick up cell
: calls in some way. The public gets what it wants.

Funny, Radio Shack (and others) do a booming business in scanners that do not go much above 500 MHz, so cannot receive cellular conversations, even through images. Even the newer triple conversion scanners, which are very immune to images, sell well.

The "cellular buffs" are a small minority of the scanner crowd. Most are interested in the local public service communications - or the easily monitored "wireless phone" conversations of their neighbors.

Bill

Look above^^ We are talking about 800mhz scanners.....stay with us now!
Oh yea.....good concentration here.

And you really need to check....the Pro-2035 and the Pro-62 BOTH receive
cell due to imaging! And damn good I might add! So do your
homework.....Sir

> The "cellular buffs" are a small minority of the scanner crowd. Most are
> interested in the local public service communications - or the easily
> monitored "wireless phone" conversations of their neighbors.

> Bill

I love being a minority. Most people who get into the hobbie but a cheep
one fist (makes sence). After they see if they like it, then they shell
out the bucks for a good one. Hell I still have and still buy non-800mhz
scanners but none of them can replace my Pro-43. Top dog in my
book......besides the AOR-8000 which is a bit expensive..(but worth it,
so I have heard!) I too like to listen to public service but I have only
met a few people on a hundred who didn't like listening to cell
calls......and they were just pissed because they have a cell phone and
didn't realize they could be listened to. Guess they had something to
hide!

More and more of the seriouse scanner buffs are ordering from Canada or the UK so they can have FULL 800mhz coverage. You can act like its not a big deal but it is. Just read the post in the scanner news groups and you will see. If we had a $1 everytime someone ask for a mod to unlock the 800mhz portion of their scanner we could retire. Facts are facts.

Just as an aside, most Threat Level II (standard PD issue , some departments do vary from level I through IIIA) run about $320-$360 a piece, I am not sure what you are selling, but I am skeptical. I have 2 vests, one was bought used from an NYC*EMS EMT for about $140, but it is about $320 new, and I have Threat Level III A vest that I purchased for about $440, with shock plate at another $45.

No I do not need this when scanning at home, but I wear a vest most of the time scanning in the car on the way to work, ie: news photography.

What state are these vests issue? State PDs can buy them at discount do to the volume, are you involved with the PD and managed to walk off with the vests? Are the panels certified, and serial numbered? What is the make? Point Blank? Gall's/Gall's Lite? Magnum? Safariland???

Anyone else a tad skeptical?

408. Freq spacing of CT1+ cordless telephones?

Newsgroup: rec.radio.scanner
Date: 1996-10-05 00:00:00 UTC
From: schwarz@physik.tu-berlin.de
Message-ID: <5356uu$5aj@brachio.zrz.TU-Berlin.DE>
Source record: 221189
Cross-posted to: alt.cellular-phone-tech,rec.radio.scanner

Could anyone tell me what frequency spacing between different channels
the CT1+ standard for cordless telephones (analogue ones, in
use for some years in Germany and probably other [European]
countries, too) is? What bandwidth (per direction) do those
phones normally utilize? I *think* they have 40 channel
pairs, but I could be wrong.
Enlightening answers are welcome. Please try to send any resonses
by mail as well. Thanks a lot.

PS: I'm not sure if this is the correct news group to ask that
question. If not, please excuse me.

Yes...CROWN is the White House Communications Agency. Both 407.85 and 415.7 are active frequencies used when AF1 and AF2 are airborne. I've heard Dan Quayle, George Bush and members of their staff on thoses freqs in the past. These freqs are not scrambled. Their are other HF freqs that are scrambled and utilized by CROWN.

You will also hear the phrase SAM (Special Air Mission) from time to time on the air freqs. SAM is used to carry Secret Service staff, limos ,etc. As was said before, once the President is aboard, that aircraft is designated either AF1, Marine 1 or Army 1.

Keep 407.85 & 415.7 plugged into your scanners as Clinton flys from city to city to schmooze the voters. By the way, watch your wallets and hide your daughters!

To help identify that bus, check the license plate. Was it a US GOVT plate?

If so, record the plate and let me know..I can identify the agency by the plate if its Fed Govt.

> giles.26@osu.edu

Here in the U.S. pilots are given the altimeter setting in QNH. That is,
if he were sitting in his aircraft on the runway his altimeter will read
the airports elevation above mean sea level. Therefore, if he is
cruising at 7,500 feet and the airport is at 500 feet msl, he has 7,000
feet to descend. Once he touches down his altimeter will read 500 feet.
In Europe they report the local altimeter in QFE. That is, when sitting
on the ground the altimeter will read "zero" even if the field is at 500
feet msl. There have been a number of accidents throughout the years
when occasionaly some pilot from one side of the atlantic flies to the
other and forgets the difference, epecially at night and in the weather.
Here in the U.S. all pilots set 29.92 above 18,000 feet msl since at and
above that altitude there is no fear of hitting any terrain.
One last thing, It is very important that each pilot flying below FL180
continualy update his altimeter setting from a station within
approximately 50nm of his position. This is to prevent gross altimeter
errors when flying long distances thru such things as weather fronts
where atmospheric pressure may rise and fall rapidly. Let's say that a
pilot leaves airport "x" and the altimeter setting is 29.50 and flies
west to airport "y" 200 miles to his west. On the way he flies through
a weather front and the local altimeter setting drops to 29.40. If the

pilot has not reset his altimeter he will now think that he is approximately 1000 feet higher than he actually is.....bummer. Especially if flying in the weather in mountainous terrain or on an instrument approach while thinking your still 1000 feet above decision height...ooooppssss!.....splat!

take care

Glen (usaf pilot)

In the UK the cordless phone are allocated as follows:

Channel Pairs Base Unit TX Mhz Handset Tx Mhz
1 1.642 47.45625
2 1.662 47.46875
3 1.682 47.48125
4 1.702 47.49375
5 1.722 47.50625
6 1.742 47.51875
7 1.762 47.53125
8 1.782 47.54375

Don't know if this is the same as the ones in Germany.

Joe

I just bought a Pro 2037 for $200 from Radio Shack. It was reg $329 and on sale this week. The Pro 62 is the same guts but in a handheld, it would be good too.

You mean to tell us that you need a bullet proof vest
in San Jose ...is that California?

I've never seen any bylines for you on any paper
such as the Merc News for pictures you take? Strange
this fact never seen...no byline.

Now NYC wearing is mandatory. AGreed.

But San Jose? One of the safest cities in the USA.

I string in the EAST BAY and a bullet proof vest
to wear did cross my mind during the Berkeley Hostage
Shooting (REAL TV WILL SHOW THE VIDEO THIS MONTH....a
new situation show)when shots fired by the cops to shoot
out a sign-light caused the bullets to richochete up near
my position ...

Bullet Proof Vests in the Safest City of the USA...one of.?

Cows in Bezerkley?

bill conduit
prof video stringer.
stills too.

"Nice guy" is somewhat subjective. If you ever had the occasion to
take issue with something he'd said, you'd likely have reason to
reconsider your opinion.

>his books and found them to be well written and very useful. I really
>don't give a rat's rear end about his credentials since he has yet to
>steer me wrong.

I don't care about his credentials, either, since they have nothing to
do with his expertise in scanners. So why, I wonder, does he insist
on flaunting them in people's faces as though they made him better or
smarter than others? His works stands on its own; there's no need to
prop it up with pretentious chest-beating and bragging.

>can be used, is great. What is disconcerting is the name calling,
>accusations etc. I know Mr. Cheek has said in the past he'd be willing
>to cut it out if you did. I assume that offer still stands.

Mr. Cheek's tactics are quite clever. He instigates attacks, then
pretends to be the victim. What most folks don't see is what goes on
behind the scenes.

OK, so you admit that it does have an effect & make a
difference.

> cable tested when I removed it from service, and it was still viable (a little more lossy
at 27 MHz, but not much).

Yea, & 27 MHz isn't much. Can you imagine what happen when you multiply
those
figures by 5 for 150 MHz or 16 for 450 MHz? It begins to look pretty
bad.

> of proof lies with you. In this country, you are innocent until proven otherwise. You
have
> NOT proven Mr. Cheek to be a liar.

Yes I have. He wrote on this NG that I do not have a valid address.
Yet,
I posted a scanned image of the postcard he sent me a few days before he
said I had no address. There are MANY other examples. You have not
been
paying attention.

> Most good professionals know that they do not know everything about their profession.
This
> is why they join groups like the International Electrical & Electronics Engineering union
> (IEEE). I don't even feel that you considered this at all.

Since I make my professional career in communications, & I really *DO*
have
the license & degree (similar) that Bill claims to have, I am aware
of & have considered your suggestion.

It sounds like YOU are the one who is not aware.

> Basically, to make a long point short. John, you are a fool to persist in this useless
> arguement. Please shelve it. I think I have made my point.

You're the fool who first said there was not UV affect on coax & then in
the

next paragraph said you have noticed some differences after age &
sunlight.

I agree, I do think Bill has some very good knowledge of scanners.

No arguement there.

My prob is with his arrogant attitude, & his saying he has licenses
that he does not have. He is a phoney.

> accusations etc. I know Mr. Cheek has said in the past he'd be willing
> to cut it out if you did. I assume that offer still stands.

On THREE different occasions we have proposed a truce with Bill Cheek
but he continues with his attacks, sarcasim, and put-downs. I proposed
2 of these truces & all he did was attack.

I do, but of course that has nothing whatsoever to do with the
subject. Nice try, though.

>>My beef with Cheeks has nothing to do with any ongoing flame wars

>SO what is your beef? You have been unfriendly and antagonistic to me
>from long before you appeared here.....starting back in FidoNet where
>you were in the attack mode from the git-go......

Wrong, Bill. You were the one on the attack, just as you are here,
whenever anyone challenges the accuracy of something you say.

>> He's right most of the time, but when he's wrong, he won't back off, and
>>then the fights start.

>This is going to be hard for you to understand, but after 33 years in
>electronics & radio engineering and technology, it will be a rare case

Irrelevant. Wrong is wrong, even if you've been in a discipline for
100 years. I've been doing some things since before you were born.
Does that make me better or smarter than you in those things? No, it
does not. Just because you have an engineering degree doesn't
necessarily mean you know squat about radio.

>where I say something that is out and out *wrong*. For one thing, I

Rare does not mean "never." And partly wrong can be as bad as "out
and out" wrong in some cases.

>"tailor" what I say to whom it is said. A lot of my writing is
>directed NOT to the guy who already knows.....rather, to the guy who
>doesn't know.

Yes, and this allows you to get away with distortions and inaccuracies
until someone comes along to correct you.

>Take "zero beating" fer instance. That means nothing except to an old
>time radioist. The term is elusive, vague, and indefinite. I used
>the term "jiggle" to describe more succinctly what one's eyes and ears

Well, that's a matter of opinion. Anyone who's been around short wave radio, music, or several other disciplines is familiar with zero-beating, even if they don't recognize the term. "Jiggle" means nothing in radio terms, so if the person doesn't know from zero-beat, then he's unlikely to figure out "jiggle," either. Better to use the common term, then describe how it looks and/or sounds. Then you've not only taught the process, you've taught the word.

>actually detect in the process. After a neophyte becomes comfortable
>with the effects and results of synchronizing and phasing two similar
>signals, then he can he told of the "insider" term, zero beating, or
>better still, heterodyning.

Heterodyning is no better a term than zero-beating. IMO, it's less descriptive. Many folks recognize the concept of a beat note, even if they don't have any radio experience.

>You tried to argue TV antennas with me, if I recall. No, I will not
>back down from that one, because I have TESTED and used TV antennas

You were simply wrong, and refused to admit it. You used dB gain figures accurately. You also made inaccurate statements about propagation.

>mounted in the vertical plane for scanners for the last 25 years.

Irrelevant.

>There is nothing from which to back down on that score. I *know* they
>work......and are a cost effective alternative to the very expensive
>and probably inferior log periodics.

Nobody said they didn't work, or were cheaper than some LPAs.

>Got anything else you want to test me on, Mr. Quarnstrom? If not,
>then let's get back to scanners and scanning......though I do take
>note that you have NOT posted anything of use to the forum (yet). So

That's a lie.

>far, you've played the same personal agenda here that you started with
>me on FidoNet.

And you have reacted with the same bragging, insults, name calling, snide insinuation, profanity, harrassment, and bombastic posturing that you did there. The only difference is that here, you have no status, and cannot throw me out of the forum if I speak plainly.

>So quit talking shit and get down and TEST ME. Or let's all get down
>on scanners and scanning and leave each other the hell alone.

Getting a bit nervous, Bill, now that someone who knows your techniques and refuses to play your game has showed up? I'll leave you alone when I'm ready, and not a second before. Of course, you could end it any time you wished, but you're incapable of doing that.

>Or does that not fit your agenda?

Does it fit YOUR agenda?

Who cares if it is illegal or not. It is a waste of money.

A good antenna will do you more than an amp ever will, and without the hassle of your neighbour's TVI.

The only reason anyone _needs_ an amp is because some other idiot has one, and so the cycle goes. Be part of the problem or part of the solution.

You can go anywhere in the world on 5 watts if the conditions are good. 1000 watts won't make conditions any better.

The only other reason I can think anyone would want a linear is for their own ego trip....that one I can't solve!

I'll second JVFAX for easy to use, easy to build, decent quality images.
I have used it to receive HF images with the comparator interface (sample
on my web page if interested). I haven't try it for VHF though. Could
someone post freqs?

These vests are for those that don't monitor the public service bands or the public servants (honest ones anyway). A lot of people might get upset if they catch you monitoring their communications, especially if your monitoring someone who is monitoring someone else that shouldn't be. Possibly one of the millions who think cellular calls are private. Maybe this should be standard issue when you purchase an Xplorer. If your the stay at home type, then invest in a better antenna instead. CNN reporters who have some time off might want to get one just because they feel naked without it.

Wow. That is one dumb statement.

You see, I love competition. The more people who by Optoelectronics
and/or other interfaces, the more who will buy the CE-232. I can't
afford Opto's merchandising, marketing, shilling, and touting budget,
so what the hell? Sooner or later, their market becomes my market.
I'm real patient.

Not that the CE-232 Scanner/Computer Interface is *better* than
Opto's, or vice versa.... frankly, I don't think they step on each
other's turf at all. The two interfaces do different things. Some
people prefer one. Some prefer the other. Some have both. Most have
none at all. Thusly, the more people who buy Opto means the more
market entries. Out of that bunch will be some who feel the Opto
doesn't do what they want it to do. That's when the CE-232 knocks on
their door and says, "Hello!".

So I am delighted that you singlehandedly, with great courage and
fearlessness, brought the Opto Interfaces to the PRO-2004. You should
be awarded a medal.

You have a problem with that? Then why don't YOU provide helpful
posts here and use the terminology that suits YOU?

>My beef with Cheeks has nothing to do with any ongoing flame wars

SO what is your beef? You have been unfriendly and antagonistic to me
from long before you appeared here.....starting back in FidoNet where
you were in the attack mode from the git-go......

> He's right most of the time, but when he's wrong, he won't back off, and
>then the fights start.

This is going to be hard for you to understand, but after 33 years in
electronics & radio engineering and technology, it will be a rare case
where I say something that is out and out *wrong*. For one thing, I
"tailor" what I say to whom it is said. A lot of my writing is
directed NOT to the guy who already knows.....rather, to the guy who
doesn't know.

Take "zero beating" fer instance. That means nothing except to an old
time radioist. The term is elusive, vague, and indefinite. I used
the term "jiggle" to describe more succinctly what one's eyes and ears
actually detect in the process. After a neophyte becomes comfortable
with the effects and results of synchronizing and phasing two similar
signals, then he can he told of the "insider" term, zero beating, or
better still, heterodyning.

You tried to argue TV antennas with me, if I recall. No, I will not
back down from that one, because I have TESTED and used TV antennas
mounted in the vertical plane for scanners for the last 25 years.
There is nothing from which to back down on that score. I *know* they
work......and are a cost effective alternative to the very expensive
and probably inferior log periodics.

Got anything else you want to test me on, Mr. Quarnstrom? If not,
then let's get back to scanners and scanning......though I do take
note that you have NOT posted anything of use to the forum (yet). So
far, you've played the same personal agenda here that you started with
me on FidoNet.

So quit talking shit and get down and TEST ME. Or let's all get down
on scanners and scanning and leave each other the hell alone.

Or does that not fit your agenda?

Perhaps you might consider taking a course or two in logic.

We have several hundred thousand scanners out there. Out of that, a
few ask for 800MHZ mods. Therefore, you see only those people who
want the mods.

Do you expect the remaining 99% to post a message saying, "Please don't
send me 800MHZ mods?"

And that is "EXACTLY" why I used the term "FRS style" not FRS! I'm sure Clint was about to list the technical differences between GMRS and FRS radios like integral antennas, narrower bandwidth, and lower power but he just didn't get around to it.

Good on yer Porchnoy,

I have noticed here in the UK, that the only people who gripe at the need to do a morse test are those who are too bloody lazy to learn it!

In rough conditions, Morse is still the most realiable method of radio communications. The human ear can detect and read an interupted carrier wave (CW or more corectly ICW) when the same signal strength am, fm or ssb signal would be totaly unreadable.

BTW: I bet the "Gripers" uses technology that is more than 150 years old....Clothes? shoes? A bed? cups? table/chairs? a light in the house at night? etc etc.

Wots rong wid antik teknoligie???? (were thha heel didd eye puth mi speil chucker?)

And I suppose you think trunking is brand new? It
was invented over 70 years ago...

If you were familiar with your topic, you would know
that some Morse requirement is still necessary under the
terms of international treaty. Complain to the
administrations of those other countries while you're at it.

Have you written this letter to the magazine? Just
curious - I wonder if they'll print it.

>banning scanner radios is not all that farfetched. After all,
>they did in the UK. And judging the present political climate

Historically, the UK never allowed anyone to monitor
government communications. The US never got around to
saying 'no' - yet. The difference is that European citizens
tend to assume that anything not specifically allowed is
illegal (often true), where US citizens assume that anything
not prohibited is legal (also true).

>Computer Decency Act (Which was declared unconstitutional).

Communications Decency Act. Also, the case is still
in the appeal phase, so a nationally binding ruling has yet
to be made by the Supreme Court.

>Orwells predictions of "1984" didn't quite come true, but we
>are getting there. I disagree, however, with the proposed
>olution that J.T. suggested, of turning to the ARRL. There
>are several things wrong with that. Some would equate this

I tend to agree with this argument.

>confiscating radios as well. They did this in WWII. They
>effectively shut down all of the Ham radio Operators for the
>duration, and in fact confiscated radios. Secondly, and more

This is true, but consider the reasons behind the
action. All non-broadcast, non-government communication was
placed in military jurisdiction because the entire nation
was at war. The technology of the time was to home in on
radio transmissions of any type when trying to find a
target. There was some concern about foreign attacks on US
soil during WWII. Also, if you forced ALL radio operators
off the air except for a select few, it was easier to look
for unauthorized transmissions - especially spy traffic.

The big government paranoia about the possible
activities of its citizens started after WWII, and came to a
head in the 1950s with Senator McCarthy. It hasn't really
gone away...

Eventually, the citizens also became paranoid about
the activities of the government.

>important is the fact (at least in my mind) that the ARRL is a
>bunch of stodgy old timers that are still stuck in the nineteen
>thirties. I equate them with the unions. They wereeffective

Are you a member? I see a lot of people spouting
tripe about ARRL that is almost always quotes from
loudmouths like Wayne Green who don't like ARRL for whatever
reasons. Yes, there are problems. Yes, there are a lot of
aging hams in ARRL, but there are also a lot of aging hams
in the US anyway. The young folks are into the Internet.
No license, only as much technical knowledge as you need to
"get by", no rules - what more could a kid want in a hobby?

>n their time, but failed to change in rapidly changing times.
>The ARRL shouldhave had some effect on the cellular ban, but
>where were they?

I agree that the ARRL might have spoken up about it,
but I have to ask, "Why should they? What business was it
of theirs?"

Scanning is not amateur radio. The League is quite
occupied with protecting ham interests in Washington and on
the international scene already. They generally pursue these
activities at the behest of the membership, although they do
often have to stay ahead of the game and tell the members
later. But can you show me where the League got a bunch of
mail from ham operators asking them to "do something" about
the proposed back in the early 1980s?

ECPA does not have any effect on ham radio. Sure,
it's harder to get some commercial wideband equipment with
full 800 MHz coverage, but it does not impact the proper
licensed use of ANY ham band. So why should ARRL have been
concerned?

>I don't consider myself a pessimist, however, in my opinion, the
>only answer to this problem is not turning to another bureaucracy,
>but rather a strong letter writing campaign to our Congressmen and
>Senators. I know, they are part of the problem, but if enough
>people point out where the votes come from, maybe they will soon
>get the idea.

I guess I'm more of a pessimist than you are.
First, we have to educate the Congresspeople (especially
their staffs, who do most of the legwork) about the

Constitution and about existing bodies of law before they pass the crap they keep coming up with. We have to counter the "protect the children" paranoia that equates Internet messages with National Security and illegal drugs. Then we have to either vote out or impeach a President who has abandoned his oath to "uphold and defend the Constitution" by issuing Executive Orders giving the US military responsibility for civilian law enforcement and surveillance of domestic activities, in clear violation of "posse comitatus". (See September 95 issue of "Boardwatch" for details. Among other things, the US Air Force OSI is now investigating kiddie porn on the Internet.)

Wow. And all this time the military has been wasting money on FEC and EDC algorithms like Reed-Solomon, Golay, and simple parity when all they had to do is beef-up Morse Code training.

I'm sure at one time buggy-whip training was an integral part of drivers education.

Just a small point:

The UK does not have any form of legislation on Scanners. They are not "banned" in any shape or form - it is within the laws of the UK to sell, purchase and own a scanner. Neither is there any restriction of the frequencies such equipment can receive (unlike the USA).

Leglisation does exist though on what frequencies you are entitled to legally listen to as a member of the public.

Until recently "scanners" with coverage anything more than AM, FM and Amateur frequencies were illegal in several European countries - Germany as an example. Even sets such as the Icom IC-R9000 were only allowed to legally receive the above. This is no longer the case.

I'd like to get suggestions for a good 'secure' cordless phone. Just being digital would probably be good enough for my use but if there are affordable units out there that actually encrypt, I would be interested in those as well. Actual model and features to look for is what I'm interested in. I just bought a GE 900 Mhz that claimed security but my 2006 disagrees, it's just a 900 Mhz analog unit.

Thanks!

I have been a ham for almost 20 years and when I started, the bands were still civil. In comes no code and the bands have gone straight to hell. QRM, cursing, name calling, frequency wars like never before. Ham radio is just like real life. The country in a whole is morally bankrupt, and so is ham radio. So go ahead and kill the code and say goodbye to amateur radio as we knew it for sure. Any idiot can memorize a question and answer book. The code was somthing special. Thats why I got my extra class license, because I wanted to take the 20 wpm before they did away with it. Casey N4GKS.

There is something missing here. When did no code ticket holders get
HF privileges? 20, 40 and 80 meters phone has always had it group of
uncivilized operators. At least since 1964 when I first started =
listening
to ham radio operators. Where have you been listening?

> Ham radio is just like real life. The country in a whole is morally
> bankrupt, and so is ham radio.=20

So those holding licenses that require code have higher morals
than no coders?=20

>So go ahead and kill the code and say
> goodbye to amateur radio as we knew it for sure. Any idiot can
> memorize a question and answer book. The code was somthing special.

Any idiot can copy 5 WPM down on paper during the test as dots and =
dashes,
decode it and pass the test. I would also venture to guess that a high =
percentage=20
of Extra, Advanced and General class hams would fail the code test if
they had to take it 6 months after passing.=20

> Thats why I got my extra class license, because I wanted to take the
> 20 wpm before they did away with it.=20

So if code is so good at weeding out the immoral operators why does=20
QST and other publications keep publishing reports of FCC actions
against Extra, Advanced and General class hams that have violated
the rules and levied fines against them? Infact let's arrange a QSO
up on 14.313 and you can explain to me how code has kept the
morally bankrupt people out of ham radio. That is if we can get
through the jamming, obscenities and malicious QRM on there.

Glenn

The whole problem is that the ARRL is trying
to attract young people to the ham radio hobby
by emphasizing modern technology aspects like
satellites, computers, and packet radio. The
ARRL fails to mention that after one obtains
an entry-level ham license, it is necessary
to learn this massively out-dated bullshit
known as Morse code just to get on decent HF
bands and to obtain higher privileges. I am
familar with my topic. If you were, you would
know that the minute the ARRL drops its support
of the Morse code requirement, the rest of the
world will follow, and we can make amateur radio
what it should be: a means for all the people
of the world to communicate in friendship.

Hello Barry,

I use the Radio Snack 20-012, which costs $29.95. It works quite well on low band. I've used a 200XLT and the 2004 on it along w/a freq counter.

The antenna can be tuned a bit and I followed the instructions of someone who tuned one to allow mine to give me better results on the Fed VHF band. It works very well in the VHF band.

UHF and 800's are ok but I can't tell you about the performance specs in these bands. I've used it w/the 200XLT, which as you know has very poor 800 reception. It does help, but any outside antenna will help the 800's.

Perhaps someone will comment on the UHF ability and if this antenna can be tuned in that band also. BTW, I've had mine for about 6 yrs, never had any problems with it or any connections. You will want to get a BNC adapter though since it only comes with the Motorola plug.

Regards,
LGS

I've got to get my 2 cents in here.

I remember when I was a kid during the 50's and I had an old Zenith console sitting next to my bed. Every nite I'd fall asleep listening to ham radio operators from all over the world "rag chewing" on AM. I'd sometimes tune around the bands and hear the dots and dashs of morse code, and wonder what wonderful secrets these guys were sending to each other. If only I could understand their language, I could travel to those distant places and learn about things that I'd only read about in books.

Then as an adult, I'd gone off to college and then Viet Nam, and nothing could have been further from my mind then shortwaves and hams and code. When the war was over, I came home, got married and bought a house. It was right next door to the biggest antenna farm you ever saw. And the ham radio bug bit, and bit hard.

Only difference was that this time I could do something about it. And I did. The code was tough. But you know what? I REALLY wanted to become a Ham. It meant so much to me. This "rite of passage", this code.

And I was ready.

I'm sure that alot of you reading this, will be laughing at what I've written, and will shrug it off as just another "old timer" that wants to keep the hoby all to himself. Well, that's ok, but it's not quite true. You see, I haven't been an active ham for about 10 years. For various reasons. One of which is the quality, or lack thereof, of

people operating on the amateur bands. That, my friends, is partly the fault of a no-code license.

Unfortunately we've cheapened the hobby by making it too easy. There were too many old timers dying off, and not enough young people entering, to fill the vacancies within the hobby. So there was panic among the ranks. The no-code license was brought in to make it easier to become a ham. To fill the ranks with quantity, but not with quality. Then too, the thinking was, that once you got a taste of amateur radio, you would want to learn the code and receive additional priveledges. But, that's not happening is it?

True, not every hobby was as difficult to get into as Amateur Radio, but it was the very fact that it was hard to become a ham, that gave this hobby it's stature.

Sure there were poor operators before "no code". . .there will always be bad apples. Amateur Radio is a microcosm, and as such, it parodies the rest of the world. Both good and bad. But, there are more, many more, poor operators since "no code" went into effect.

Now, well, now the hobby has fallen into disarray, like a neighborhood that has started to decay because those that cared, moved out of the city.

And the exodus continues. . .

Wow, sorry, I kind of got carried away. I didn't mean to use up this much bandwidth. But I needed to address the issue. My way.

Barry, WA2KLS (still proud to be a ham)

Yeh great, what next get rid of licensing all together? Looking at what happened after no code here in Toronto I'd say ham radio is now just another form of CB. No not all No coders are born again CB'ers but it's close.

I owned and ran a repeater, was involved in RDF and a lot more. After the Crap that No code brought in, I gave it all up and invested my money on Scanners and other monitoring equipment. Ham radio has changed forever.

Morse Code is a stepping stone. If your serious enough, you will learn it like everyone else. (or would have) In my opinion it filtered out many who were not willing to take the time to learn it and just wanted a glorified CB to play with.

When they got rid of code they should have increased something else. Maybe an aptitude test would have been in order!

: Good for you! Just count the request for (800mhz) mods on the scanner
: newsgroups. It speaks for its self.

HOW can one rig a scanner to block these images? How can one put in an
attentuator circuit to only pick up stronger signals?

Also.... seems this thread has jumped solely to scanner discussion... why
don't you folks edit the headers to exclude rec.radio.cb?

My Realistic 2004 scanner display is scrambled after start-up.
Functions are, however, unaffected.
After I press reset button on back of scanner, all is back to normal
until I shut off and restart. Then the problem repeats itself. Any
permanent solution to this annoying problem??

Thanks
Dan

Why don't you post some more "constructive" comments? If Bill really is the "World Class Ass" you say, I think we'll figure it out in due time. All you've done is prove what an ass you can be.

>: > Am I alone in that I have no interest in listening to cellular?

Hear, hear. I find the cell images annoying on my radio, especially since I work practically underneath a cell tower and it overloads on my FD's 866.x mhz frequencies.

I occasionally wonder if the same scenario (cell freq freaks) would play out if it were fast food outlets that were illegal to listen to. Can you imagine the number of people who were looking for mods to unblock the 30.8x freqs in their scanner, or finding some way to circumvent the 30 mhz block, or buying an 'old' scanner that can pick up drive-thrus.

I feel safe in that 99.998% of my cellphone calls (or even landline calls) would bore someone completely to death. I can't imagine someone wanting to hear any of the following, which summarizes the total of my cell transmissions this past weekend:

"I'm at Blockbuster. Have you guys seen Mystery Science Theater 3000 yet?"

"I was talking with Peter today and he says we have the defib unit now, so I'm going to be stopping by the hall before I get home."

"If I grabbed a pizza on the way home, would you guys eat it?"

"How many rolls of film will you need me to pick up, and do you need batteries?"

Man, come to think of it, now I understand why you find it absolutely necessary to listen to cell calls. Maybe you could buy out all but the most expensive batteries in every 7-11 in my path so that I have to feed Duracell some more money. Yeah, that's it.. now I see why it's so crucial for you to hear people's inane phone conversations.

I have had one attached to the dash of the car for years, and run all
over that area and have never had a problem. As far as I know there are
no restrictions on using a handheld or mobile scanner in the car{except
for tuning cell freqs). You could check at the local police station.

Happy Scanning

Mickey Hill

When did I say ANYTHING about code? No, not at all, code requirement has NOTHING to do with MY OPINION. Although I consider myself to be a political conservative, I would be a flaming liberal when compared to the ARRL. They seem afraid to take a chance, press forward, modernize their thinking. I am not the only Ham who feels this way. {BTW I DID pass the code test in 1965.}

Everything changes. If we don't get a lot more hams than we have now,
you can say goodbye to ham radio, PERIOD. Code is outdated as a
requirement to be a ham.

>memorize a question and answer book. The code was somthing special.
>Thats why I got my extra class license, because I wanted to take the
>20 wpm before they did away with it. Casey N4GKS.

It hasn't been done away with. In fact, you can learn 50 or 60 WPM if
you want to. Or, you can run for office and do something about both
the country AND ham radio. Or you can sit and bitch about how ham
radio and the country are going to hell.

It's your choice. Is this a great country, or what?

"Nice guy" is somewhat subjective. If you ever had the occasion to
take issue with something he'd said, you'd likely have reason to
reconsider your opinion.

>his books and found them to be well written and very useful. I really
>don't give a rat's rear end about his credentials since he has yet to
>steer me wrong.

I don't care about his credentials, either, since they have nothing to
do with his expertise in scanners. So why, I wonder, does he insist
on flaunting them in people's faces as though they made him better or
smarter than others? His works stands on its own; there's no need to
prop it up with pretentious chest-beating and bragging.

>can be used, is great. What is disconcerting is the name calling,
>accusations etc. I know Mr. Cheek has said in the past he'd be willing
>to cut it out if you did. I assume that offer still stands.

Mr. Cheek's tactics are quite clever. He instigates attacks, then
pretends to be the victim. What most folks don't see is what goes on
behind the scenes.

Irrelevant. Wrong is wrong, even if you've been in a discipline for
100 years. I've been doing some things since before you were born.
Does that make me better or smarter than you in those things? No, it
does not. Just because you have an engineering degree doesn't
necessarily mean you know squat about radio.

>where I say something that is out and out *wrong*. For one thing, I

Rare does not mean "never." And partly wrong can be as bad as "out
and out" wrong in some cases. Nobody's perfect, Bill. Not even you.

>"tailor" what I say to whom it is said. A lot of my writing is
>directed NOT to the guy who already knows.....rather, to the guy who
>doesn't know.

Yes, and this allows you to get away with distortions and inaccuracies
until someone comes along to correct you.

>Take "zero beating" fer instance. That means nothing except to an old
>time radioist. The term is elusive, vague, and indefinite. I used

>the term "jiggle" to describe more succinctly what one's eyes and ears

Well, that's a matter of opinion. Anyone who's been around short wave radio, music, or several other disciplines is familiar with zero-beating, even if they don't recognize the term. "Jiggle" means nothing in radio terms, so if the person doesn't know from zero-beat, then he's unlikely to figure out "jiggle," either. Better to use the common term, then describe how it looks and/or sounds. Then you've not only taught the process, you've taught the word. There's no need to talk down to your audience.

>actually detect in the process. After a neophyte becomes comfortable
>with the effects and results of synchronizing and phasing two similar
>signals, then he can he told of the "insider" term, zero beating, or
>better still, heterodyning.

Heterodyning is no better a term than zero-beating. IMO, it's less descriptive. Many folks recognize the concept of a beat note, even if they don't have any radio experience. And when you achieve your objective of zero-beating two frequencies, then you no longer HAVE a heterodyne.

>You tried to argue TV antennas with me, if I recall. No, I will not
>back down from that one, because I have TESTED and used TV antennas

You were simply wrong, and refused to admit it. You used dB gain figures inaccurately. You also made inaccurate statements about propagation.

>mounted in the vertical plane for scanners for the last 25 years.

Irrelevant. You keep bragging on your experience and education as if that somehow excuses you when you act like a jerk.

>There is nothing from which to back down on that score. I *know* they
>work......and are a cost effective alternative to the very expensive
>and probably inferior log periodics.

Nobody said they didn't work, or were cheaper than some LPAs. The "Probably inferior" was a nice touch, however, and a typical Cheek tactic. In only a few words, you've managed to convey that you're an expert on antennas and that anyone who bought an LPA is a dummy who got ripped off. And all without one word of proof of either statement. Oh, you're good, Bill. I'll give you that.

>Got anything else you want to test me on, Mr. Quarnstrom? If not,
>then let's get back to scanners and scanning......though I do take
>note that you have NOT posted anything of use to the forum (yet). So

That's a lie. Unless, of course, you consider that my agreeing with you about coax deterioration was of no use to the forum.

>far, you've played the same personal agenda here that you started with
>me on FidoNet.

And you have reacted with the same unwarranted bragging, insults, name calling, snide insinuation, profanity, harrassment, and bombastic posturing that you did there. The only difference is that here you have no special status, and cannot throw me out of the forum if I speak plainly.

>So quit talking shit and get down and TEST ME. Or let's all get down
>on scanners and scanning and leave each other the hell alone.

Getting a bit nervous, Bill, now that someone who knows your techniques and refuses to play your game has showed up? I'll leave you alone when I'm ready, and not a second before. Of course, you could end it any time you wished, but you're incapable of doing that.

>Or does that not fit your agenda?

Does it fit YOUR agenda?

I'm cleaning house and offer the following scanner magazines for sale:

There is a total of 96 issues of Monitoring Times and Popular
Communications. My intent is to sell the MTs and PCs and throw in the
WSR and NSR issues as a bonus to someone interested in the entire package.

The cost for the entire package mailed in the lower 48 states is $150, or best

offer. I would rather sell the entire package as a whole, but if that doesn't

work, I'll offer individual magazines in lots of 10 for $25. I don't want to
mail single issues all over the country.

Please respond via emil if you have questions or would like to make an
offer. Thanks!

Gary <glm@xmission.com>

Monitoring Times:
1990 Nov & Dec only
1991 Complete
1992 Complete
1993 all except March
1994 Complete
1995 Complete
1996 Jan thru October (current)

Popular Communications:
1990 Dec only
1991 all except Jan
1992 Complete
1993 Jan only

World Scanner Report
1993 Complete (10 issues)
1994 9 issues (last one missing)

National Scanning Report
5 total issues
(May/Jun 91, Sep/Oct 91, Jan/Feb 94, Mar/Apr 94, May/Jun 94)

Just quite the opposite. He trys not to flaunt his credentials. John
Mackey insists
he display the credentials. All I see is how how credentialed John is,
but with
no display of knowledge, just attacks. So please once again provide an
example
of his flaunting, and chest-beating. If he is flaunting them, provide
me what he
has said his credentials are.

> >can be used, is great. What is disconcerting is the name calling,

BW>>Dr Pepper wrote:
BW>>> the fact (at least in my mind) that the ARRL is a
BW>>> bunch of stodgy old timers that are still stuck in the nineteen
BW>>> thirties.

BW>I've got to get my 2 cents in here.

BW>I remember when I was a kid during the 50's and I had an old Zenith
BW>console sitting next to my bed. Every nite I'd fall asleep listening
BW>to ham radio operators from all over the world "rag chewing" on AM.
BW>I'd sometimes tune around the bands and hear the dots and dashs of
BW>morse code, and wonder what wonderful secrets these guys were sending
BW>to each other. If only I could understand their language, I could
BW>travel to those distant places and learn about things that I'd only
BW>read about in books.

BW>Only difference was that this time I could do something about it. And
BW>I did. The code was tough. But you know what? I REALLY wanted to
BW>become a Ham. It meant so much to me. This "rite of passage", this
BW>code.

That "rite of passage" is equal to a fraternity hazing ritual. To
discuss it in the PROPER forum, switch to rec.radio.amateur.policy
~~~~~~~~~~~~~~~~~~~~~~~~

BW>I'm sure that alot of you reading this, will be laughing at what I've
BW>written, and will shrug it off as just another "old timer" that wants
BW>to keep the hoby all to himself. Well, that's ok, but it's not quite
BW>true. You see, I haven't been an active ham for about 10 years. For
BW>various reasons. One of which is the quality, or lack thereof, of
BW>people operating on the amateur bands. That, my friends, is partly the
BW>fault of a no-code license.

Nonsense. The no-code Technician license has only been around half
the time you've been inactive...and such classes are restricted to 50
MHz and up amateur bands. There has been almost NO changes to HF
band access for those classes which required the Morse code test.

BW>Unfortunately we've cheapened the hobby by making it too easy. There
BW>were too many old timers dying off, and not enough young people
BW>entering, to fill the vacancies within the hobby. So there was panic
BW>among the ranks. The no-code license was brought in to make it easier
~~~~~~~~~~~~~~~~~~~~~~~~

BW>to become a ham. To fill the ranks with quantity, but not with
BW>quality. Then too, the thinking was, that once you got a taste of
BW>amateur radio, you would want to learn the code and receive additional
BW>priveledges. But, that's not happening is it?

The REAL history of amateur radio is quite different. If you would
follow the messages in rec.radio.amateur.policy, and read up a bit
you would find the truth. Did you know that MARS stations were under
orders to CEASE CW transmissions on 1 Oct 96? That leaves U.S.
amateur radio service as the ONLY radio service that requires a Morse
code test for a license.

BW>True, not every hobby was as difficult to get into as Amateur Radio,
BW>but it was the very fact that it was hard to become a ham, that gave
BW>this hobby it's stature.

More nonsense. The radio amateur license test began with a Morse
code test because that was the ONLY way to communicate by radio
shortly after the turn of the century. Morse code was devised about
1839, Morse and Vail patenting their telegraphic apparatus in 1840.
By the time spark transmitters arrived (shortly before 1900) Morse
code was already a senior citizen. The olde fahrtz kept Morse in the
test for HF priveleges because "if they had to learn it, then
everyone else that comes after have to learn it." No more, no less,
but a LOT of rationalization to keep it in there.

BW>Sure there were poor operators before "no code". . .there will always
BW>be bad apples. Amateur Radio is a microcosm, and as such, it parodies
BW>the rest of the world. Both good and bad. But, there are more, many
BW>more, poor operators since "no code" went into effect.

That's twice you said that lie. Give it up. There are NO legal U.S.
amateur licenses allowing operation in amateur bands below 30 MHz.
Since you've been out of the universe for a decade, you may not know
that WARC-79 gave amateur radio three more HF bands.

BW>Wow, sorry, I kind of got carried away. I didn't mean to use up this
BW>much bandwidth. But I needed to address the issue. My way.

I gave you a rebuttal, MY way.

BW>Barry, WA2KLS (still proud to be a ham)

So? My Commercial Radiotelephone 1st Class license was issued in
1956 and I've operated and maintained HF transmitters before that.

Colleague hobbyists,

I posted this same message two days ago and NOBODY answered anything! A visit to the Monitoring Times' WWW site didn't help much: the reviews posted are those for the month of September. Did you receive MT already? I haven't received yet! Please drop me an Email line on the subject if you don't mind to help. I'll sure appreciate it! Here it goes again:

I'm still waiting for the arrival of the 10/96 issue of Monitoring Times here in CA to read Bob Parnass' review on the 2046! What did he say about it?!!! I had in mind to purchase the scanner this weekend if it was really worth it, but wanted to read the news first. Did Bob compare it to the previous Pro-2026? What's briefly the final recommendation?

I would appreciate newsgroup postings or direct Email on the subject from people on the East coast or the Midwest who already received MT or have some "personal" knowledge regarding the 2046's performance rating.

Thank you.

I've heard some mention of there being some sort of "virtual downgrade"
that mods. a scanner to pick up cell.

Is there such a mod for a PRO-29?

I know that any scanner manf'd after April '94 can't be physically
modified for cell., but perhaps there is one such "virtual
modification/downgrade" for a PRO-29.

Do they consist of special key-coded entries?

Thanks in advance.

> Aircraft altimiters have a setting where, if you dial in the correct
> barometric pressure for your location, the altimiter is supposed to show
> your correct barometric altitude. (NOTE: not necessarily the same as
> your altitude above sea level)

Incorrect - When your altimeter is adjusted to local altimeter setting
it WILL show your altitude above Mean Sea Level (MSL). I believe you
are confusing corrected altitude with "pressure altitude". Pressure
altitude may not be the same as MSL altitude.

Pressure altitude is used in calculations that pilots are concerned
with. We use P. Alt. to figure like density altitude, true airspeed,
etc. Pressure altitude referenced to 29.92 in/hg regradless of the
actual altimeter setting at a given location. But we are not concerned
with pressure altitude when we are looking at the altimeter in a plane.
(Although when flying above 18,000 feet all altimeters in the US are set
to 29.92).

> When the controllers tell you, "Atlanta Altimiter is 2990," they mean
> that if you're planning to land at Atlanta and you set your altimiter to
> 29.90 inches, then when it's dial is shows the published elevation of
> the airport, your wheels should be approximately on the runway.

And this would always be referenced to MSL. The altitude of airport
does not change when the barometer changes.

To answer the original question: YES. The altimeter setting is the
barometric pressure for the airpport.

533. Dole bus campaign freq's - NJ

Newsgroup: rec.radio.scanner
Date: 1996-10-07 00:00:00 UTC
From: "L.G. Shirley" <lgshirley@worldnet.att.net>
Message-ID: <32599E70.DA1@worldnet.att.net>
Source record: 220993

Prez contender Bob Dole (Patriot) came to Milltown, NJ today for a campaign stop at the boro park. I was able to attend the rally. Most of it seemed pretty much routine but I found some interesting activity.

The NJ State PD provided escort service for the Dole campaign buses. Monitor 866.3125 which is their simplex and portable rptr freq for a variety of details, most notably surveillance. (Monitor 851.3375 and 852.1625 if Govenor Whitman is w/Dole)

None of the following was in use this time 866.0125, 866.5125, 867.0125, 867.5125 and 868.0125. I've found some of these Nationwide mutual aid freq's used previously by the NJSP and even NJ Transit for a while.

During the Governors conference which was held in NJ a few yrs back, 868.5125 was used by NJSP and they have a portable rprt for it. I'm told that some towns in North Jersey are using these freq's however.

SPEN 1 - 154.680 was used but I believe MIlltown Boro was the culprit here. I saw several Troop cars with low band antennas and VHF style ones also. But the low band is supposed to be for CB?!? That's what one knowledgeable person told me about the antennas.

Previously 44.620 and 44.940 were used by the Troops for surveillance even when the 800 trunk system was already set up and being used state wide. Just a thought worth remembering, monitor the old low band freq's.

Milltown and North Brunswick provided foot patrols and traffic officers. This is the norm when a campaign comes to your town. The USSS worry about the protection service. I did however find NB using the input alone to do some of the traffic duties. Most towns locally here use simplex and inputs so as to not tie up there rptr's. I'm sure many towns elsewhere do the same thing.

My freq counter quickly picked off 165.2125 as the freq the USSS detail was using at the park. It was, as usual, simplex and quite low pwr. USSS in NY was using 165.375 and NJ was on 165.5125 for other details. I did find 164.650 used for a short comm while at the park. Unknown if it was the local detail. Crown was heard earlier on 415.700.

The stop was well planned and other than the local kids w/Clinton signs acting like, well, kids, nothing unusual happened. The language these kids (10 yrs old?) used could have caused intermod on my scanner! Keep in mind that there will be demonstrators at any campaign. I noticed "persons" keeping a close eye on these people and staying very close to them but never caught any radio usage.

The press was there and most were using C band feeds back to NYC. I did snag a local station, WCTC, using 455.950s with twins Yagis to feed audio back to the station. They were using 25 watts. The fellow running the WCTC system told me most stations were using the 450 and 455 bands simplex at campaign stops.

I did not find any wireless mics in use. The PA system Dole used was hard wired. The band playing there may have been using the same system. I have found the standard mic freq's (169-172) in use previously at this park and at some campaign stops before.

Now for the surprise. I quickly noticed the use of 464.500 when I parked 3 blocks away. I thought it was the locals at first but the language was so USSS in style, "Barnes, Barnes, (to) Jones".

I then programmed in the input and found it was used on occasion. They eventually changed channels and they turned out to be the standard UHF itinerants. Try the following configuration (no guarantees) should you be able to monitor the Dole campaign:

Ch 1 - 464.500r ch 2 - 464.550s ch 3 - 469.500 ch 4 - 469.550

The rptr setup is very low pwr. Simplex is probably 2 watt HT's. I didn't hear any other IT's or business freq's in use. These are probably the Dole campaign workers that travel w/him. Very desciplined, no fooling around, making sure all the minor details were being addressed, food, tour bus, etc...

While I don't have a cellular modified scanner, I do have a freq counter that locked on to some campaign CP's. I would venture to say that if you use a counter you too would find the A cell sites (869-880 & 890-891.21) in use, only a guess.

At times I ran the counter and my 200XLT off a Jim M-75 pre-amp. Super results, as expected. This is a great amp should you be in the market for one.

I was able to isolate the UHF band with the pre-selector and lock on to the 464's easily. I've posted info on the Jim before. If you want a pre-amp, check this one out. It did a great job of opening the squelch on my 200XLT for the State PD 800 freq. The band selector on this item can help reduce interference from pagers as you monitor other bands. It currently goes for $119. I've had mine almost 2 yrs, no problems.

I know the campaign will be in Lyndhurst tomorrow and in the Somerville, NJ area later. Then Hamilton later in the afternoon. Enjoy the monitoring.

Regards,
LGS

Hi All,

Any comments on the Opto Xplorer good or bad? I am thinking about getting one. I like the ALL IN ONE BOX idea. I have the AR-8000 - Scout 40 setup, too much of a mess to deal with.

Any ideas would be welcome. Thanks for your interest and help.

:-) Greg

538. send no money

Newsgroup: rec.radio.scanner
Date: 1996-10-07 00:00:00 UTC
From: Jeff <jdlemast@mail.netusa1.net>
Message-ID: <3259CDB9.42D2@mail.netusa1.net>
Source record: 220998

The procedure is simple:

1) Write your name and address on 5 sheets of paper.
Below that, write the words, "Please add me to your
mailing list." Fold a $1 bill in each piece of paper
and mail them to the following 5 addresses:

1. H. McAllister
9543 East 500 North
Kokomo, In 46901

2. Daniel Sutherland
20 Greenville Drv, Grovedale,
Geelong, VIC 3216

3. Thomas Andersson
Ringvagen 43
Stockholm
SWEDEN

4. Per Hellberg
Poste Restante
34220 Alvesta
SWEDEN

5. J. Shoffner
711 South 300 West
Kokomo, In
46902

2) Now remove the top name from the list, and move the other
four names up. In other words, #5 becomes #4 and so on.
Put your name as the fifth one on the list. Use a simple
text editor such as Notepad, in your "accessories" window
(If you have MS-Windows), or DOS editor. In fact, any
editor will do.

3) Post the article to at least 200 newsgroups. There are
17,000, so it shouldn't be hard to find 200. Try posting
to as many newsgroups as you can, and the bigger the
newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and
should start seeing returns within a week or two. Of course,
the more newsgroups you post to, the greater your return is.
If you wish to remain anonymous, you may use a psuedonym,
call yourself "The Manager","The Boss", whatever, but make

sure your address is correct.

Now, here is why the system works:

- Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

- Each person who sent you $1 now also makes 200 additional postings with your name at #4, i.e. 1,000 postings. On average, therefore, 50 people will send you $1 with your name at #4. Average return with 50 people = $50.

- Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500.

- They make 200 postings each with your name at #2, which is 100,000 postings. Average return is 5,000 at $1 each = $5,000.

- Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list, AND THAT IS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total avg. income in one cycle = $55,555.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

THE ONLY COST IS $5, AND 5 STAMPS, 5 ENVELOPES and 5 PIECES OF PAPER. Anyone can afford $5 for such an effortless investment which produces such SPECTACULAR RETURNS.

There are millions of internet users, and millions of new net surfers every month! This is the great advantage of the Internet. People all over the world can hear you and listen carefully if you talk reasonably. Many will take that chance! I agree. If it wasn't the Internet, and it was a small circle of people, the return would be rather small. It would not succeed.

But here on the Internet, it is a giant village, where thousands of new members join in every day! The amount of money returned to you is 200 times larger because the group is 200 time larger, i.e 200 postings, and the risk is zero. You CAN'T lose!

Remember, read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily. Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT WITH THIS IDEA TO MAKE MONEY! BESIDES, NOT PLAYING THE GAME FAIRLY IS ILLEGAL. SO LET'S BE REASONABLE AND PLAY FAIRLY, SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK TO ALL OF YOU, and remember, play fair and you'll be a winner. Come on and finally get those things you've wanted for a long time!!!

First of all..... I had not wanted to get involved, but this bullshit has gone on long enough.

You have a Commercial Radiotelephone operating license. So do many others, in fact my 12 year old son has repeatedly passed the practice test. SO WHAT? Any trained monkey can take, and pass the GROL, it is a very dummied down test.

It has so little bearing on Two way now a days, as it is not requred by the FCC anymore!

And what degree do you claim to have?

You have asked Bill Cheek all these questions, surely you will be man enough to answer them first!

You have mentioned MANY times to me in FIDO netmail that you have attended NUMEROUS Motorola training schools, yet you refuse to name ANY of them, or name ANY of the instructors!

I doubt you could even tell me where the school is! Specifically, now, and describe the surroundings....

While you are at it, explain why NONE of the Two way shop owners or managers in your area know who you are, when you claim to have all sorts of experince in the field?

And just what is your career in Communications? Janitorial for a modem manufacturer?

Seeing as you have been so quick to question others, share with us a little about yourself John!

****
****

TO THE NUMEROUS THAT HAVE SENT ME EMAIL ABOUT THE FAMOUS JOHN MACKEY JR POST ON FIDO "OOPS, I BLEW UP A HAM REPEATER" SEND ME YOUR ADDRESS AGAIN, I WILL SEND YOU COPIES OF THAT, COPIES OF OTHER STUPIDITY HE HAS POSTED, AND OF COURSE, THE SPIN MANY HAVE ON HIS VOTING FOR HIMSELF ON THE FIDO CB RADIO ECHO FOR MODERATOR, USING A ALIAS FROM ANOTHER BBS!!!!!

Any Information on where I could get the recommended file above
(SOP9637a.zip) would be great.

Thanks Rolf Brusletto.

544. Re: BC9000 Keypad Tricks

Newsgroup: rec.radio.scanner
Date: 1996-10-07 00:00:00 UTC
From: eplatt@wco.com
Message-ID: <3258a96c.12175166@news.wco.com>
Source record: 221050

Check out http://www.geocities.com/SiliconValley/5019/9000.html
But here they are.

When you hold down the 2 + 9 + DELAY keys as you turn the 9000xlt on
you enter a sort of Test mode. To do a
Keycheck test you can hit any key or turn the VFO knob either
direction and the alpha display will tell you
what key you're touching or which direction you're turning the VFO
knob.

At this point if you momentarily hit LOCK (to the right of the VFO
knob) and one other button various things
will happen.

2+9+SCAN held while turning power on will clear all memories and load
in test frequencies

2+9+MANUEL while turning power on will clear all memories to
000.0000mhz

LOCK & C Replaces all memories with 1300mhz and alpha taga channels
1-250 with Channels 00-249 in the
display. AGAIN WIPES ALL MEMORIES!

LOCK & D Checksum and Firmware version number (v.09 in all 9000xlt's
to date)

LOCK & E LCD Display test

LOCK & PROG Runs a short, repeating Demo Program incorporated
specifically for showing at the January
1995 CES in Las Vegas. It also sounds alttention tones as the message
scrolls on the display. (Note that the
word "Scanner" is spelled "Scaner" in the demo program; it was too
late to change this mistake that
originated in Japan.)

2+9+ATT held while turning power on will set the unit into a turbo
search test mode. (requires a Signal
Generator)

The first 3 tricks will WIPE OUT THE SCANNERS MEMORY!, the
last 4 won't

ADDITIONAL NOTES

No reason available on why the FM filtering is narrower (ie less HiFi)
than the BC8500XLT during quiet

periods. There was an improvement in the circuit, but this means a bit of hiss when no transmissions are
coming through.

All BC9000xlt's (whether built in 1994 - serial numbers 45+ , or in 1995 - serial numbers 55+ have firmware
version 0.09. All have AM mode available on any frequency the scanner is capable of.

A TIP FROM BOB PARNASS (MONITORING TIMES)

You can use the SND button during a Search as a sort of Radio Shack-type MON button, transferring a freq to
any bank you'd like to become your "Monitor" bank. With RS Scanners, you have to go through extra steps to
transfer the memories from monitor channels to permanent channels.

I don't know where you live, or what the sun is like
there, but I have used the common coax available at
hamfests, discount stores, and radio shack for years
and never experienced such rapid degradation. In
fact the only problems I've had were with a couple
of inadequately weatherproofed connections.

Sounds like you are using a microphone input on the recorder that has
automatic level control.

What happens is when it first turns on there is heaps of gain and it
overloads the input of the
tape recorder until it backs itself off a bit. It is common for it to take
from one to two seconds
on small portable cassette recorders.

Try attenuating the signal before you plug it into the recorder as this
will make it look more
like a microphone input.

Hope this helps, Mark.

There lies the source of the old wives tale that you must
replace your coax every few years. I have used RG-8,
RG-58, RG-59, RG-6 RG-213 and a few others. The only failure=20
I have ever had is when the connector was not properly
sealed and caused water contamination. I have some
RG-8 that is over 10 years old and still shows the same
SWR and impedance resistance it did at install. Same
with the RG-6 though it is only 8 years old.=20

might be able to
>hear those weak signals...
>
> Grove Electronics sells one...or two.

I sent for one. Got it and the noise did not
leave...it just remained the same. Sent it
back and that was that. Quite possibly there
is no answer....with all the variables having
to do with LOCATION of antennae and Location
of roof and Location of where your radios are
and how long the length of the cable and more.

Also, certain scanners seem to do it more than
others....certain antennae seem to increase this
level of noise and all etc's. I have four up on
the roof and each has its own peculiarities as far
as what signals it receives from where originating.

Plus the rain and the cold weather and the sun and the
very hot sun factor play parts....when It's really hot
\ I get great reception over teh hills behind me. When
It's cold I don't get reception that great over the hills
behind me.

I'm told that Sun Flaring affects reception ...

569. Secrets in the OS-535 hardware -pro 2035 & 2042

Newsgroup: rec.radio.scanner
Date: 1996-10-07 00:00:00 UTC
From: hh357@aol.com
Message-ID: <53aiq0$nsn@newsbf02.news.aol.com>
Source record: 221075

When the OS 535 first came out, and was reviewed by various magazines, it was noted that there were at least two mysteries. Both involved daughter board connections on the OS board.

These spots were labelled Cellular Key, and Digital Data (?). What has come of this? Has anyone figured out what, or how they work?

Is there any connection between the Cellular Key position and the well publicised 20 digit code that enables cellular reception? I doubt it, but who knows.

With the proliferation of digital radio, maybe this "feature? " would be useful.

Your responses will be appreciated.
cheers

As I recall, standard receivers come with two bandwidths,
too narrow and too wide....
However, there is no harm in trying (the interface is cheap
enough). If its too narrow the picture will be too dark if too wide
it will appear "washed out" with little contrast. BUT...you can
probably enhance the pictures with a picture editing program. Most
such programs have an "equalize" function which can help restore
the contrast.

Murata in the UK are in Fleet. Phone number is 01252 811666 but unless you
want to open an account with a turnover of several K you won't get
very far :-(

There are several distributors who you could try. Eurodis/HB Electronics
(01204 555000) being one in Bolton although Murata should be able to point to more local
ones (if your not in the NW !)

If you know the specific filter you are after Murata should be able to
tell you which distributors have or have had that particular item. If Murata
or a distributor have no stock you will probably be stuck with minimum order
via a distributor for a few hundred pieces.

> Collins mechanical filters and Hy Q or similar crystal filters.
> Again, I know these are sold by manufacturers such as AOR or Kiwa, but
> they seem to rather more expensive than they should be, as they are
> sold as spares or accessories for their products.

Even if you do find distributors with stock they may well be rather more
commercial that you wish and have minimun order value or qty in which case
getting the single units from AOR and the like can be your best bet.

Good luck with your projects.

Yes to 1.
Yes to 2.

Defaults to 12.5KHz steps but 5, 12.5 or 50KHz step sizes can be selected
when searching between any two frequencies within the PRO-2035's frequency
coverage (No 30KHz steps though).

>
>I believe you mean diminished loss. There is no gain in
>feedline, only loss.

Could be semantics, but gain is relative. This is especially pertinent when working with ratios and decibels. Consider these terms:

1. More gain
2. Less gain
3. More loss
4. Less loss

or, just

1. gain
2. loss

So what if something has a negative dB gain? Or a negative dB loss?

Consider: "A low pass filter has an insertion loss of 5 dB."

Thus, it can also be said to have a gain of -5 dB. Antennas are especially pertinent here where they can exhibit either gain or loss. Interestingly, we never ascribe "gain" to coax, nor "loss" to antennas, but that is NOT any cosmic principle.

A point source isotropic radiator is said to have 0-dBi gain. In fact, a discone antenna has 0-dBi gain across most of its performance band, but in fact, it also has -dB gain in spots. THAT is a relative loss. RG-58 coax has a certain loss per 100-ft at 1 GHz. RG-6 has a much lower loss per 100-ft at 1 GHz, for a relative gain compared to RG-58.

Gain can be positive or negative. Loss can be positive or negative.

Thus: - Gain = + Loss and + Gain = - Loss

It is generally best to not mix the terms, gain and loss; rather to use one term best for a situation, and then apply polarity to indicate

relativity as needed.

But the entire matter is not cut and dried, so that's why we don't usually use "gain" to describe coax, nor "loss" to describe antennas.

But we can.....and there are other situations where either term is appropriate. The most important thing is to use whatever term is most comfortable, and then apply the (+) or (-) polarity as appropriate.

Roger, we have 'several' crystals here - but what model scanner
do you have? Different manufacturers used different IF frequencies
in their crystal based scanners, requiring different crystal
resonance frequencies to be on channel. Can you elaborate?
Best Regards, Dave Lovell

You can't be familiar with your topic because obviously you have never tried to listen to 20-meter or 75-meter phone! Cussing, chasing other people off the frequency with catcalls, playing endless loop recordings of the last few words somebody said on the air, etc, etc, etc are not MY idea of "communicate in friendship"! Is that your dream for the future of ham radio?

(Others have already pointed out that only people who have passed a code test are on those bands.) Now take a look at 2 meters in many metro areas. No Morse requirement there, yet the same kind of crap is growing on VHF. The code requirement has nothing to do with the amoral conditions that are growing in amateur radio - along with the rest of society.

Has anyone any views on the "better" of these two. I know there are a lot of factors that make one "better" than another - some are personal preferences - but views would be appreciated. Technically, the AOR seems to have better specs but two UK dealers have told me that the Icom performs better than the AOR.

One of the more likely scenarios is that one or more solder joints on the Logic/CPU board are going defective. You could try resoldering some of them in the vicinity of the CX-501 clock resonator and see if that does it..... Otherwise, see the below excerpt from my FAQ for a broader view of what you might be dealing with.

==========[From the FAQ - copyrighted 1996] ==========

034: My PRO-2004 has problems, first mild and now severe. It has been repaired several times. Can you fix it?

There is a distinct possibility this PRO-2004 has problems with defective solder joints. Back in 1986, there was a production run of the PRO-2004 manufactured with a defective wave soldering machine. At first, it was only marginally defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was discovered, was that many defective PRO-2004's had been shipped to market. Some immediately failed within the warranty period and were repaired or replaced. Others didn't fail until after the warranty expired, and were either repaired or junked. Some didn't fail for years.....

Failures appear to come in waves.....periodic rashes. Defective solder joints are a serious problem, because the radio can be

fixed only to the extent that it is broken. Repaired solder joints today have no bearing or relationship to those headed for failure in a week, a month, or a year. There is no economical way to repair them all in one fell swoop. A PRO-2004 with defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

Thanks for the NOAA info I have downloaded the jvfax program and it look very good indeed. I will start to build the interface this week.

For Freqs you will want to try 137.50 137.4000 137.7700 136.7700 137.8500 and get a copy of the satellite tracking software called: STSPLUS look for a file called SOP9637a.zip You will need that to help

find the satellite. Or just scan the above freqs and you will hear after some time the chir;s.

GMRS radios can be used on 7 of the 14 FRS frequencies. They are shared between the two services. (the GMRS interstitial freqs.) However, GMRS operators (or anyone else) may not use non-type accepted radios on the 7 FRS only frequencies.

> I believe that FRS & GMRS use some of the same frequencies, it blows
> that theory.
>
> Scott

Exactly...

Does anyone get the impression that there are some GMRS users out there who haven't a clue about FRS, and then get upset to find out that they will have to share a part of their service with unlicensed "CBers"?

593. Questions on scanner images

Newsgroup: rec.radio.scanner
Date: 1996-10-07 00:00:00 UTC
From: John Pelura III <jpelura3@waterw.com>
Message-ID: <32595D8B.3EC8@waterw.com>
Source record: 221099

I have a bc200XLT and a friend I work with has a Pro39 (I think). One night we were scanning and I came upon a conversation at 895.175. He came upon the same conversation at 852.075 (he does not have cell a cell mod, I do). I think that these two frequencies are not in the cell phone allocations, but I'm not sure. I did a little bit of reading in the Police call and it mentioned something about imaging.

Question 1: Does anyone know the scanner IF for either radio?

Here's what I came up with.

895.175 - 852.075 = 43.1

43.1 / 2 = 21.55

21.55 / 2 = 10.775

Now, If I add the 21.55 + 852.075 = 873.625
Now, If I subtract the 21.55 from 895.175 = 873.625

Question 2: Is it safe to say that both radios use an IF of 10.7 or, could it be 10.8?

Question 3: Is 873.625 the true frequency that the conversation was being hel on?

I don't know much about this sort of thing. I know someone out there can help me.

Thanks, John

> determines the impedance of the cable and this distance must remain

The TYPE of material seperating the inner & outer conductor ALSO plays
a big role in impedence along with the distance between.

> All the outer insulation does is to cover up the cable and has nothing
> to do with the characteristics of the cable itself.

It also helps protect the cable from moisture & sunlight.

WS-1000 Scanner $400 or B.O. (I pay shipping!)

Measuring just 97mm(h) x 58mm(w) x 24 mm (d) it is the Worlds
smallest handheld scanner. The Welz 1000E is made by Diamond Antenna
Corp. It's the size of a pack of cigarettes!

Not only is the WS-1000 extremely small but it requires just 2 x AA
batteries for internal power and with these fitted still only weight
a remarkably light 200 grams.

Main Features
Frequency coverage is continous from 500KHz - 1300MHz with no gaps!!!!!!!!!!
Modes of AM, NFM & WFM available on any frequency
400 memory channels
Programmable steps of 1, 5, 6.25, 9, 10, 12.5, 15, 20, 25, 30,100 & 100KHz.

Reply to tirsch@msn.com if your interested.

Any USAF aircraft... Theoretically, any other nation could use that same callsign for one of their military aircraft transporting their head of state, & probably do when in contact with their own ATC, but the US President's plane is the only one as far as I know that will just (have the audacity to) use "AIR FORCE ONE," & not "UNITED STATES AIR FORCE ONE" when operating overseas, but of course they know quite well who it is, since they'll have an SS agent or US Embassy Defense Attache Office rep there in the control tower!

> >Marine 1 is the Presidents helicopter when he is aboard. But they also
> >use Nighthawk 1 when he is NOT aboard.

Static callsign for HMX-1 aircraft is NIGHTHAWK ##, & has been for decades.

> >I've never heard them use Army 1.
>
> That's being reserved for a "Micheal Dukakis" style ride in an M-1
> Abrams..... ;o)

Actually, the Presidential helo mission used to be shared between an Army unit at Davison AAF (Ft. Belvoir, VA) & the USMC's HMX-1 at Quantico/Anacostia. ARMY ONE was their version of MARINE ONE.

Routine Presidential helo mission became USMC-only back in the late 1970s or early 1980s.

While I'm at it, someone recently indicated in this forum that EXECUTIVE ONE FOXTROT is any civil aircraft transporting a member of the 'first family.' Untrue. The aircraft used are normally standard USAF/89th AW birds like a C-20.

Since I'm on a roll (!!) the callword CROWN has several different meanings, depending on who is using it. It is a general code for the Executive Complex (WH/OEOB/EOB), a general code for the WH, or a code denoting a specific facility within the Complex.

Interestingly, CROWN & many other WHCA/USSS callwords, have been in use since *at least* the Kennedy Administration, and the CROWN/White House connection was in open-source material (LOOK Magazine) in the early 60s. Their continued official usage indicates that these days, they serve more of a brevity/tradition purpose rather than the original COMSEC/OPSEC one.

It certainly is far-fetched, but I can understand why you think it
isn't, after reading all your misinformation. Did it hurt much, falling
down that slippery slope?

> After all,
> they did in the UK. And judging the present political climate

No, they didn't (ban scanners) in the U.K.

> here in the US, laws like this are not only possible, but are
> probable. Look at the cellular ban, the "V" chip, and the
> Computer Decency Act (Which was declared unconstitutional).

Are you really trying to use those three as examples of how it is
"probable" that scanners will be banned?!

Cellular ban is a poor example because:

1. It was enacted thanks to the lobbying efforts of a well-funded,
focused industry (CTIA), with a minor, unorganized response by hobbyists
& maybe the scanner manufacturing industry. Is there a similar
organization calling for the ban/seizure of scanners?

2. It, like many other Acts of Congress, is difficult to enforce &
routinely ignored, & will eventually be rendered moot by technology.

"V" (Violence) Chip on TV can be controlled by adult citizens. The
proposal is an effort to create a tool to assist parents in regulating
their children's activities. Many American parents are too lazy to
monitor their children the old-fashioned way, so the V-chip is a tool
that would make things a little easier when the kids are in front of
America's #1 babysitter (the TV set).

As for the CDA, you yourself negated it by saying it was declared
unconstitutional! However, it was rather scary that such a broad Act
was even proposed.

> Orwells predictions of "1984" didn't quite come true, but we
> are getting there. I disagree, however, with the proposed

You're paranoid. Maybe that's why you have a scanner -- so you can
hear 'em as they're coming to get ya! ;)

> olution that J.T. suggested, of turning to the ARRL. There
> are several things wrong with that. Some would equate this
> move the same as registering guns. Now the government knows
> where the scanners and scannerists are. They can come
> and get them any time they want to.

I don't read Pop Comm, so I don't know what exact was suggested about
the ARRL, and you didn't elaborate. But based on what Pepper writes,
there was a proposal to 'register' scanners with the ARRL or have the
ARRL become a quasi-governmental authority (as has happened with some US
amateur radio stuff)? WHO would equate that with registering guns? Be
a man & give/support your own ideas, and cut out this silly "Some would
equate this with ______..." junk. I wonder what the ARRL thinks of
someone trying to dump the responsibility of saving scanners for the
good of humanity on them?

As for the government knowing who/where the scanners are, so what? Do
you just have antennas in your attic, out of fear that the NSA (National
Scanner Agency -- the 'S' standing for Security is just part of their
cover -- they don't really do ELINT stuff, they actually just keep track
of US citizens with scanners!) is prowling the streets, updating their
database of homes & cars with VHF/UHF receive antennas on the roof, then
radioing in the 'black helicopters' for closer looks at rooftops?

Aren't you worried that you'll be on the Top Secret NSA 'hit list'
simply from posting in this forum? Oh, perhaps that's why you hide
behind the "Dr. Pepper" pseudonym...

> The Turner Diaries

There are lots of books out there that describe lots of different
things. So what?

> They did this in WWII. They
> effectively shut down all of the Ham radio Operators for the
> duration, and in fact confiscated radios.

Perhaps you were a ham, living in Hawaii during WWII. I wasn't born
until the 1960s, but my recollection of a few articles I've read that
mentioned the emissions-control policies for US hams during WWII is
that it was understood & grudgingly supported by the hams who realized
that enemy aircraft *could* have used the amateur transmissions as a
navigational aid. While certainly some radios were confiscated for
whatever reasons, I think most hams were simply advised not to operate
-- their radios weren't confiscated.

Do you really mean to use wartime restrictions on civillian radio transmissions as an example how a peacetime ban on VHF/UHF receivers is "probable?"

> Secondly, and more
> important is the fact (at least in my mind) that the ARRL is a
> bunch of stodgy old timers that are still stuck in the nineteen

Nice diatribe on the ARRL, but it is not relevent, since the ARRL is the American Radio Relay League, and not the American Radio Relay & Scanner League...

> The ARRL shouldhave had some effect on the cellular ban, but
> where were they?

You remind me of the gays who used to chant something like "While thousands of gays are dying of AIDS, where is George Bush?!"

The answer is simple -- he was at home practicing safe-sex with his wife, Barbara.

The ARRL focuses on amateur-radio related issues!

Are you equally annoyed that the American Dental Association doesn't have a strong position against global warming?

> I don't consider myself a pessimist, however, in my opinion, the

Haha, that's the ONLY optimistic statement in your posting! ;)

> only answer to this problem is not turning to another bureaucracy,
> but rather a strong letter writing campaign to our Congressmen and
> Senators. I know, they are part of the problem, but if enough
> people point out where the votes come from, maybe they will soon
> get the idea.

Um, WHAT PROBLEM??? The only problem I see is that some person calling themselves "Dr. Pepper" has become...un-corked --for no apparent reason-- about scanners being not only banned, but seized from homes.

I'm all for using intelligence for threat detection, assessment, tracking, & mitigation, but if you have a valid reason to indicate that the big bad scan-ban is imminent or even truly on the horizon, post some hard intel, not silly speculation!

622. LAPD knocked off the air

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: Pat Pope <patpope@pacbell.net>
Message-ID: <325ABBF6.2973@pacbell.net>
Source record: 220878

On Monday October 7, at around 10:00pm LAPD was knocked off the air. It appears that none of the repeaters worked. They called a Tac Alert and appeared to send everybody back to the station in many if not all Divisions. The air units were flying over all parts of the city at higher than normal altitude sending messages simplex to ground units to head back to the station, and to reduce MDT traffic since the computer system was becoming overloaded and could crash. A Metro Unit in the valley became involved in a pursuit, and fortunately was equipped with a Tac 1 radio and was able to communicate the old fashioned way.

Does anyone know have any more details, or know how this happened? How could the whole system have a significant single point of failure? Are the Astro radios so low powered they can't talk to the station on simplex? Could an earthquake cause a similar outage?

623. DATA Skip on a RS-2045? (Does it work?)

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: WagnerJ@OhioEdison.com
Message-ID: <53e92i$amu@watt.oedison.com>
Source record: 220879

I just bought a RS Pro-2045 scanner, and for the most part am happy with it.

It has the DATA skip feature, that supposedly will auto-skip frequencies that have either dead carriers or carry data signals on them. Sound like an ideal feature for monitoring trunked systems!

The problem is that when I have it enabled, it doesn't seem to work. There are some restrictions, such as the Priority mode must be off for DATA skip to work, and I've followed those restrictions, but still the scanner will sit all day on a trunk data signal with DATA skip enabled.

Did I get a bum scanner or is it one of those features that somebody forgot to implement before they shipped the scanners?

No, I was not. Bill threatened me many times with ejection, but since
I didn't break even *his* rules, he couldn't find a way to do it, I
guess. That didn't stop him from blustering and threatening me at
every turn, however. By doing this, he evidently hoped to intimidate
me or bluff me into shutting up. Pretty ironic behavior from somebody
who was quite vocal in *this* conference about "freedom of speech,"
and who strongly opposed having a moderator here.

> If so, why? If, indeed, you are an ejectee, you are not the first to
>come into this news group raising hell with Bill afterwards. Andy

625. Homemade discone for VHF/UHF scanner reception?

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: twhite@digitrix.com
Message-ID: <53eg0i$fsj@newshost.cyberramp.net>
Source record: 220881
Cross-posted to: rec.radio.scanner,alt.radio.amateur.antenna

Has anyone here ever built a discone antenna for VHF, UHF, and scanner work? If so, do you have any plans, formulas, or diagrams to make it work? I think this would be the best kind of antenna for scanner work, and I don't think it would be all that bad for ham VHF either. I've seen the discone antenna advertised in the Radio Shack catalog, and they claim it works on the 2m, 220, 440, and 1300MHz ham bands, too. I wouldn't mind getting double, triple, or more duty out of the same antenna. Having already started work on my 2M J-pole, though...

Anyway, TIA for all responses.

If you ever hear of any of the equipment from the Grand Island, NE location becoming available on the surplus market, I want to know about it. Supposedly there is a basement full of old Hallicrafters parts down there, and I would love to get my hands on them.

629. For Sale: Radio Shack Pro 26!

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: Amran Din <amran@ix.netcom.com>
Message-ID: <53eil6$965@dfw-ixnews6.ix.netcom.com>
Source record: 220885

For sale: SPECIAL

Realistic (Radio Shack) Pro-26 Scanner with no gaps--25 MGz to 1.3 GHz continuous coverage, 200 channels, triple conversion, wide 25MHz to
1.3GHz coverage, search skip and data skip. Radio Shack's best scanner, sells for $449.99 at Radio Shack outlets without leather case and tax.

This scanner receives ALL action frequencies plus bands not found on most scanners--UHF military aircraft, VHF land mobile, 220, 900 1296MGz
Ham, FM broadcast, TV audio, CB. The Triple-conversion design cuts image interference. Switchable RF attenuator--locks out all but nearby
signals, thus making it easy to find frequencies in use at car races, air shows and other exciting events. Search skip lets you select up to 50
frequencies to avoid during searches. Data skip prevents lockup on data signals and unmodulated carriers during a search. Auto store puts active
features in to specific memory banks while preventing duplications. One touch weather, aut and manual AM/FM/FM-wide mode selections, and
HyperScan--50 channels per second search and Hyper Search--300 channels per second search. See Radio Shack Catalog--page 40--for picture.

This Scanner is brand new and comes with a custom leather case, box, and all manuals.

Radio Shack's price for the same scanner--but with gaps in frequencies-- and leather case is $470

I'm Only Asking $420 with all options above + continuous coverage feature.

Send all offers to "amran@ix.netcom.com"

Happy Scanning :-)

Are there other former CB_Radio subscribers here? If so are you too having trouble getting CQ Communications to honer their subscription agreement. CB_Radio went out of production, but the remainder of the subscription was to be fulfilled with the magazine "Popular Communications".

I received a notice from CQ Communications saying my subscription would expire with the December-96 issue, this even though my subscription started with the April-96 issue, even though CB_Radio was not even in production in December-95 or even January-96.

I replied by snailmail saying "BullShit, my subscription started with the .April-96 issue", Now they are saying my subscription will end with the Feb-97 issue rather than with Dec-96.

I emailed Mr Ort the editor of PopCom explaining my situation. he said he would check into it for me. He replied saying he was told my subscription expires with the Feb-97 issue, but he would send me a copy of the March-97 issue himself. I replied i didn't want any favors but what i had paid for (including the March *AND* April issues), but would now like my subscription cancelled and a refund made since they arent going to send the 12 issues they agreed to. I got a very nasty responce from Mr Ort.

I'm curious whether this is happening just to me or is a wider spread problem? /Bert

Actually, the president's aircraft uses classified and rotating
callsigns when overseas. His trip to Bosnia was not "trackable" by
callsign. Do you actually believe the State Department or Treasury
Department could put an agent in every tower and air route control
center along his flight plan?

The city of College Station, Texas has gone to an 800 mhz trunking system as of today. The police dept, fire dept, and other city organizations use this system. If anyone has any info at all about this system, I would love to know about it. Note: This is not the same as the TAMU trunking system that Texas A&M University uses. If you want info on that, I can hook you up. Thanks for any responses. Send directly to: swr9925@acs.tamu.edu

652. ~FCC closes down all 12 monitoring stations~

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: au@ix.netcom.com
Message-ID: <53ct1f$58d@dfw-ixnews11.ix.netcom.com>
Source record: 220926
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,alt.radio.pirate,rec.radio.scanner

From Mobile Radio Technology Oct '96:

"The FCC has closed all 12 of it monitoring stations. Almost all FCC field offices are equipped for monitoring frequencies at VHF and above. The monitoring stations were additionally equipped to monitor signals in the high-frequency (HF) range. Stations were closed in the following locations: Allegan, MI; Anchorage, AK; Belfast, ME; Douglas, AZ; Ferndale, WA; Grand Island, NE; Honolulu; Kingsville, TX; Livermore, CA; Powder Springs, GA; San Juan, PR; and Vero Beach, FL.

Other offices closed by the commission include those in Buffalo, NY; Norfolk, VA; Miami, Houston, Portland, OR; and St. Paul, MN.

Ok whats open?

Offices that remain in operation include Atlanta; Baltimore; Boston; Chicago; Dallas; Denver; Detroit; Kansas City, MO; L.A.; New Orleans; New York; Philadelphia; San Diego; San Francisco; Seattle; and Tampa, FL.

The FCC has previously announced that upon closing of the field offices and monitoring stations that it would have a toll-free number to report Land Mobile interference problems. 800-322-8255 "

According to this article Prior to June 1, 1996 the FCC maintained 35 field offices and monitoring stations, this number has dwindled to 16 offices.

Just thought it was an interesting piece of news to pass on to all the radio enthusiasts.

Glen,

Why don't you elaborate and tell us all EXACTLY what went on behind the scenes on Fidonet? Were you or were you not kicked out of Bill's echo? If so, why? If, indeed, you are an ejectee, you are not the first to come into this news group raising hell with Bill afterwards. Andy Moss, Hugh Duff and John Mackey have already done it. Mackey seems to be the only one left. You place yourself in good company. Carry on.

"Nighthawk 1"? I would bet that it's the call sign when he was/is aboard
a Nighthawk hellicopter? If he was aboard a NAVY hawk then it would
probably be called "Seahawk 1" for the NAVY's equivalant to the
Nighthawk
hellicopter. Marine 1 is an old King hellicopter. If he wanted to get
his
teeth rattled, he might be on an H-46 SeaKnight (SeaKnight-1) or if he
wanted to give a shot at hunting subs from he might be on Seasprite-1.

Buy a one of the new PRO2006 ($350) being offered here on a daily basis,
along with the Opto456 interface ($200) and you're well under $700.

If you want a handheld, go with the AOR2700, being sold at a discount for
$200 (I've heard but not confirmed) because it has or soon will be
discontinued. The Optolynx interface is about $100 (there are a couple of
others for the same money but the Opto seems to be the most flexible).

The code specifically unlocks the Opto 535 interface, which can be installed in the PRO2035 or 42. Buying a $300 (or is that one also on sale with the Opto 456 for $200 too?) interface to listen to cellular obviously does not make much sense. You can buy an entire scanner for that amount of money or close to it and do that). However, if the main objective is to get computer control, with the added benefit of getting cellular, it's the only game in town.

665. WS-1000 Scanner for Sale (NO GAPS)

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: tirsch@msn.com
Message-ID: <00001ff6+000061e6@msn.com>
Source record: 220939

For Sale WS-1000 Scanner $400 or BO (I pay shipping!)

Measuring just 97mm(h) x 58mm(w) x 24 mm (d) it is the Worlds smallest handheld scanner.

Not only is the WS-1000 extremely small but it requires just 2 x AA batteries for internal power and with these fitted still only weight a remarkably light 200 grams.

Main Features
Frequency coverage is continous from 500KHz - 1300MHz with no gaps
Modes of AM, NFM & WFM available on any frequency
400 memory channels
Programmable steps of 1, 5, 6.25, 9, 10, 12.5, 15, 20, 25, 30,100 & 100KHz.

> and living with the inconvenience whenever I use it in the truck?

There is no problem with you using the 12VDC jack on the back of the scanner for base use. A 1 amp power supply will more than supply all of its needs. As far as removing the power cord. It would again be no proble m provided that you used a connector made for that purpose and drilled a proper hole (perhaps enlarging the present hole where the cable comes in). Naturally you would have to desolder the power cord from the inside of the scanner. After that, simply re solder it to the connector you have put on the back of the radio.

Enjoy....

There's over 30 states available FREE right now!

Yup...you read it right, FREE.

Check it out today at:

http://www.oz.net/~gmcavoy/index.html

We've got a 5 meg limit on WWW space for this project.
We're NOT askin' for money here! However, a lot of folks
have been generous with their web space (most ISPs give you
5 megs for a web page whether you use it or not...) and we've
therefore been able to put up more states at once. So, if you
don't see the state data you want...you can either just be patient
or drop us a bit of email offering web space and we'll talk about
setting you up as an href link for your state database.

Questions/Comments...email us.

Don't get a AR 2700, it's miserable. It has awesome features but the
receiver is crap.

I just received my new Optoelectronics Xplorer.
I find it initially disappointing, it has cellular blocked out and their
literature says nothing about this. It picks up FM and harmonics.
needs internal FM filter. The features are good and it has good audio.
Anyone else have any information.....?????? Larry

> to the polls for the past few months.

You evedently have a problem with the written word or how about the word in general. First of all my "childish and tasteless rantings" consisted of one line...
"It couldn't be said better".
(a comment to the line, Let's throw these two white trash Arkansas thieves the hell out and back to the trailer park they came from in Arkansas, written by Don Hayes)
Bill Clinton has never owned a house much less a trailer. Maybe you think that trailer park should be replaced by Homeless Shelter. Okay...

Let's throw these two white trash Arkansas thieves the hell out and back to the Homeless Shelter they came from in Arkansas.

Perhaps you wish to control my freedom of speech. While I realize that we don't agree politicly, I hope you believe in the Bill of Rights, I have exercised mine and you yours. It takes two wings to fly, The left wing tries harder and we keep flying to the right.

This is the point, your comments will be the counter-point and then this thread is over. You're right this discussion doesn't belong here.

However, they ARE still monitoring from many of these
same sights, remotely. The data is sent to a central
monitoring station near Washington DC, I believe. So
the FCC is still monitoring both commercial and amateur
activity in both the HF and VHF spectrum areas. They
have to, by law, I believe. This is another example of
Ann Rands(Sp?) thesis that eventually all jobs for
most people will be taken over by computers and
machines. Only the very brilliant few will remain useful
to the on going economy and whatever life style will exist
for the un and under employed.

The Boston field office in Quincy Mass. can remote control the Maine
monitering post as well as any of the others they need in the Region.
From what I understand these are just further staffing cutbacks that
continue to make it harder for them to do their job.

From: Brian Karas <bkaras@ford.com>
Message-ID: <325A91B5.2C6B@ford.com>
Source record: 220959

I found a keypad code for the Pro-51 (2,9,L/O) that will program test codes into it's memories, some of these codes are in the 'locked out' freqs, and the scanner will scan them. The problem is I was under the understanding that after these test codes were in the memory banks you could direect-enter any frequency, but this doesn't seem to be the case. Was this limited to an earler release of the scanner?? Mine is about 8 months old.
Does anybody have any mods to open up this scanner, or did I miss something??

Thanx...

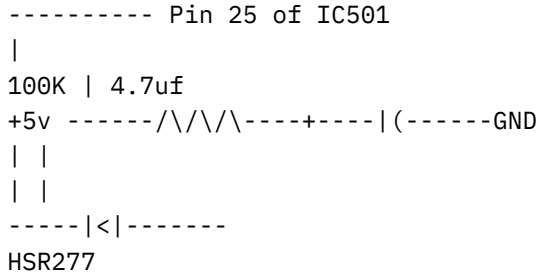
In article <32587119.15A@vir.com>, dmark@vir.com says...
> My Realistic 2004 scanner display is scrambled after start-up.
> Functions are, however, unaffected.
> After I press reset button on back of scanner, all is back to normal
> until I shut off and restart. Then the problem repeats itself. Any
> permanent solution to this annoying problem??
>
> Thanks
> Dan
> dmark@vir.com

Since you can press the reset button and everything works fine, your problem could be with your POR (Power-on Reset) circuit in the scanner. This circuit is used to allow the power supply time to stabilize before initializing the CPU. If the CPU tries to initialize before the power supply is stable, it will either crash, or come up in an unknown state, which explains why your scanner display is scrambled on power up. By the time you reach around and press the reset button, the supply has had more than enough time to become stable and then everything works peachy.....

The Power-on reset circuit looks like this:



Basically this circuit is the electrical equivalent of an automatic reset button pusher. On power up the capacitor's voltage slowly increases to the point where it becomes sufficient to drive the reset line high on pin 25 of the CPU of the scanner. The amount of time that it takes this capacitor to charge to high level is sufficient enough to allow the power supply to stabilize to a level more friendly to CPU's.

I am not sure of the component numbers on the PRO-2004, but I know that on the Pro-2006 the three components listed above are D501, R517, and C508. The three components are a 100K resistor, 4.7uf capacitor, and a HR277 diode, they should be in the vicinity of the main CPU.

As for troubleshooting I would check these three components, look for defective soldering, and check to see if pin 25 of the main CPU has lifted itself from it's pad.

If your POR circuitry is working correctly then it could mean that your power supply is taking a long time to stabilize (which is probably a bad thing.....).

Good Luck
Ultrix@aimnet.com

P.S. The component numbers listed above are for the 2006, I figured I would include them so someone with a set of schematics of both scanners might be able to cross-reference them for you....

687. Re: Dole bus campaign freq's - NJ

Source record: 220961

In a previous article, "L.G. Shirley" <lgshirley@worldnet.att.net> wrote:
->Prez contender Bob Dole (Patriot) came to Milltown, NJ today for a
->campaign stop at the boro park. I was able to attend the rally. Most of
->it seemed pretty much routine but I found some interesting activity.
->
->The NJ State PD provided escort service for the Dole campaign buses.
->Monitor 866.3125 which is their simplex and portable rptr freq for a
->variety of details, most notably surveillance. (Monitor 851.3375 and
->852.1625 if Govenor Whitman is w/Dole)
->
->None of the following was in use this time 866.0125, 866.5125, 867.0125,
->867.5125 and 868.0125. I've found some of these Nationwide mutual aid
->freq's used previously by the NJSP and even NJ Transit for a while.
->
->During the Governors conference which was held in NJ a few yrs back,
->868.5125 was used by NJSP and they have a portable rprt for it. I'm told
->that some towns in North Jersey are using these freq's however.
->
->SPEN 1 - 154.680 was used but I believe MIlltown Boro was the culprit
->here. I saw several Troop cars with low band antennas and VHF style ones
->also. But the low band is supposed to be for CB?!? That's what one
->knowledgeable person told me about the antennas.
->
->Previously 44.620 and 44.940 were used by the Troops for surveillance
->even when the 800 trunk system was already set up and being used state
->wide. Just a thought worth remembering, monitor the old low band freq's.
->
->Milltown and North Brunswick provided foot patrols and traffic officers.
->This is the norm when a campaign comes to your town. The USSS worry
->about the protection service. I did however find NB using the input
->alone to do some of the traffic duties. Most towns locally here use
->simplex and inputs so as to not tie up there rptr's. I'm sure many towns
->elsewhere do the same thing.
->
->My freq counter quickly picked off 165.2125 as the freq the USSS detail
->was using at the park. It was, as usual, simplex and quite low pwr. USSS
->in NY was using 165.375 and NJ was on 165.5125 for other details. I did
->find 164.650 used for a short comm while at the park. Unknown if it was
->the local detail. Crown was heard earlier on 415.700.
->
->The stop was well planned and other than the local kids w/Clinton signs
->acting like, well, kids, nothing unusual happened. The language these
->kids (10 yrs old?) used could have caused intermod on my scanner! Keep
->in mind that there will be demonstrators at any campaign. I noticed

->"persons" keeping a close eye on these people and staying very close to
->them but never caught any radio usage.
->
->The press was there and most were using C band feeds back to NYC. I did
->snag a local station, WCTC, using 455.950s with twins Yagis to feed
->audio back to the station. They were using 25 watts. The fellow running
->the WCTC system told me most stations were using the 450 and 455 bands
->simplex at campaign stops.
->
->I did not find any wireless mics in use. The PA system Dole used was
->hard wired. The band playing there may have been using the same system.
->I have found the standard mic freq's (169-172) in use previously at this
->park and at some campaign stops before.
->
->Now for the surprise. I quickly noticed the use of 464.500 when I parked
->3 blocks away. I thought it was the locals at first but the language was
->so USSS in style, "Barnes, Barnes, (to) Jones".
->
->I then programmed in the input and found it was used on occasion. They
->eventually changed channels and they turned out to be the standard UHF
->itinerants. Try the following configuration (no guarantees) should you
->be able to monitor the Dole campaign:
->
-> Ch 1 - 464.500r ch 2 - 464.550s ch 3 - 469.500 ch 4 - 469.550
->
->The rptr setup is very low pwr. Simplex is probably 2 watt HT's. I
->didn't hear any other IT's or business freq's in use. These are probably
->the Dole campaign workers that travel w/him. Very desciplined, no
->fooling around, making sure all the minor details were being addressed,
->food, tour bus, etc...
->
->While I don't have a cellular modified scanner, I do have a freq counter
->that locked on to some campaign CP's. I would venture to say that if you
->use a counter you too would find the A cell sites (869-880 & 890-891.21)
->in use, only a guess.
->
->At times I ran the counter and my 200XLT off a Jim M-75 pre-amp. Super
->results, as expected. This is a great amp should you be in the market
->for one.
->
->I was able to isolate the UHF band with the pre-selector and lock on to
->the 464's easily. I've posted info on the Jim before. If you want a
->pre-amp, check this one out. It did a great job of opening the squelch
->on my 200XLT for the State PD 800 freq. The band selector on this item
->can help reduce interference from pagers as you monitor other bands. It
->currently goes for $119. I've had mine almost 2 yrs, no problems.
->
->I know the campaign will be in Lyndhurst tomorrow and in the Somerville,
->NJ area later. Then Hamilton later in the afternoon. Enjoy the
->monitoring.

->
->Regards,
->LGS
Excellent report! I'll be listening today in north Jersey.

The closest I've come is E.H. Yost Company (AKA Mr. NiCd). They sell a
insert for $19 (plus S&H). I haven't tried it yet. It's still 600
mAH. I figure next time I need a pack I'll try it, it can't be any
worse than the pack Uniden sells. If you need thier number, let me
know, I'll get it.

'Tracksat' is probably one of the best shareware tracking progs around
and current elements can be easily picked up at various sites on the
web.

What transmits on 137.77 & 136.77. Never heard of these, sure the're
correct?

Transmission:

NOAA 12 137.50mHz (morning and evening passes)
NOAA 14 137.62mHz (midday passes)
MET 3-5 137.85mHz (currently on as afternoon passes)
MET 2-21 137.85mHz (currently off)
MET 3-6 137.80mHz (currently off)
Sich1 & Okean4 137.40mHz (really interesting images but transmission
intermittant - schedule available off web)

693. PRO-2035 Power Source

Newsgroup: rec.radio.scanner
Date: 1996-10-08 00:00:00 UTC
From: plukens@imap1.asu.edu
Message-ID: <53c7gj$imr@news.asu.edu>
Source record: 221004
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi All,
This weekend, I took a road trip, and took my pro-2035. I was
mildy annoyed with the power plug, so I was thinking of removing it and
using an external 12v DC power adaptor in the DC in-jack (for base use).
But before I did
this, I was wondering if there were any drawbacks to using the 12vDC jack
rather than the internal 120v AC power supply. If so, is there a way to
replace the 120v power cord with a 120v jack and a removable power cord?
(Radio Shack Part Numbers?) Or am I better off just winding the thing up
and living with the inconvenience whenever I use it in the truck?

Thanks in advance......

PRESS RELEASE

Visit http://www.gosupersonic.com to download a fully functional trial
version of SuperSonic.
SuperSonic v2.01 is a very poweful and very inexpensive alternative to
expensive radio
hardware. It can be used to create attended and fully unattended complex
audio feeds.
Beta tested on Eagle Radio Networks, SuperSonic is a powerful tool for
radio broadcasters, internet audio broadcasters, and amateur/pro disc
jockeys.

No, we didn't have all that 20 years ago.
And the truth still is the same: we all value things directly in ratio to their cost or effort of getting them.
CW is a rite of passage: everyone struggles to learn it - it is not easy, it is WORK. And when it is done, you value the effort done; and the privledges granted. Anyone can learn the code, if they work. ANYONE can learn the code if they WORK. Doesn't matter how you phrase it, it is still true.
We are a gimme now society and generally don't want to work for what we want -- just charge it, and maybee we'll pay the bill later.

Any argument that CW is "old" or outdated is so openly stupid I find it difficult to believe it can be voiced. CW is the SIMPLEST form of radio communication. The SIMPLEST: the simplest equipment for transmitting and the simplest for receiving. Doesn't even need a computer or TNC.

IF you can't even learn the simplest form of radio communication
.....

I tested both an Icom R8500 and AOR AR5000. The reviews
and test data will appear in Monitoring Times magazine.

To be *quite* brief, the AR5000 is more flexible
and has more features. The larger R8500 is constructed
more robustly and is much easier to use.

Both models perform well and neither is a "dog."

I need to purchase an outdoor antenna that I will connect to my 200XLT. Does anyone have any suggestions. I will be listening to mostly fire on low band, police on highband, and state police on 800 band, so I need something that is all around good. I live in a suburban area, the terrain is mostly flat with with houses as the only obstructions. I live in south jersey about 35 miles from Philly, PA.
Thanks for any assistance.

It comes with the charger, nicad battery, and case. I don't have the
original manual or boxes, but I have a copy of the owners manual... and
what good is the box anyway?
For anyone is new to the group or not familiar with this scanner;
Hand held, 200 channel, 11 bands + weather.

10 meter Ham 29.0-29.7
Low Band 29.7-50
6 Meter Ham 50.0-54.0
Aircraft 118-136
Military Land Mobile 136-144
2 Meter Ham 144-148
High Band 148-174
Federal Government 406-420
70cm Ham 420-470
T band 470-512
800 Band -
806.0000-823.9875
849.0125-868.9875
894.0125-956.0000

(All freqs in MHz)

You pay C.O.D with cashiers check or money order.

I'm not sure what it's worth so Make me an offer. Best offer in the next
three days takes it. Please don't email and ask what I've been offered.
If your interested submit your bid.

Used by an old lady on Sundays to listen in on her neighbors cell phone
conversations.

Excellent Condition.

About 3 years ago I informed the Portland field office of a problem occuring every 15 mins starting @ 5 mins after the hour, every single hour. I tracked the problem down to the Eugene area, but the problem could clearly be heard with a good receiver & antenna 100 miles away in Portland. First they lost the paper complaint & it was not in their log. Then I did another & they said they could not hear anything in their
office using a scanner with the stock antenna on the back. They refused to
do any further investigation. This was on a commercial business freq in 150 MHz. We have also made complaints about ham radio problems right in the Portland area giving them specific time patterns & frequencies but they do nothing.

The Yaesu FT-50R is a hand held amateur Radio transciver, ulta compact
dual band unit (TX on 144-148 and 430-450). It also has a Wide Band
Receiver (75-200MHz, 300-540MHZ and 590-999MHZ). There are 112 memories.
I have been told that this is a great amateur rig. BUT, what I would
like to know is how good is it as a SCANNER? How good is the receiver?
Should I consider this instead of the BC3000XLT?
Any information would be appricated.

I just purchased one Bearcat SC150 sport, and was wondering if anyone could tell me of any mods for it. I have surfed the net and found none for the SC150. I am particularly looking for a cell mod, but unable to find one. Is it possible at all? I hope so, or have they just not figured it out yet? By the way, how old is this scanner? Is it a relatively new scanner? Thanks.

Gord.

P.S.
Please don't reply to this address, reach me at agsoon@sfu.ca, or just post any comments. Thanks.

I am looking for some scanner software such as Probe 2.0 and
ScannerWEAR. They do not have to be the latest versions. I have
ScanCat Gold already and AM NOT interested in ScanStar for Windows
unless at a very good price.
Email me your bottom line price or if in a trading mood, let me know
what you would be willing to trade for.

This is a great 2M/440 Amateur rig, no doubt.

The WFM is not great on this radio. Most scanners with this mode are much better. The two I played with were not very sensitive on bands outside the 2M/440 amateur bands. I'm not sure how good it is in the 800-999MHz range - probably not good.

Only 1 priority channel. Many scanners come with more than 1 priority channel. The latest offerings from Uniden provide 10 priority channels and the check is a bit faster. Also, with the Yaesu, I think the DW channel must be channel 1 when in memory channel mode. Alphanumerics are very nice, however.

Overall, IMHO, it's probably the best basic HT ham rig for the money but it's not necessarily a great scanner. The WFM is poor. No data skip or mass-unlock of locked out channels. Scanning is slow compared to the near 50 or 100 channels/sec on modern uniden scanners. Only 112 channels (yeah, that's a lot, but many feel strapped with less than 200 and many hams will fill up channels with repeaters, etc). The FT10 has banks which are hard to set-up and I *think* the FT50 doesn't do banking at all - a major drawback for scanning. It lacks search and store features found on radios of comparable price. Coverage starts at 76MHz or so and so older police/fire in the 33MHz area can't be scanned (which is still used in some communities here in Mass). No selectable delay.

If you are a ham who likes the VHF amateur bands and only want/need one radio and wish to have wide coverage for receive, this is a great rig to get. Those looking for a scanner only might be better spending somewhat close to the same money and get a 400 channel Uniden BC3000XLT or similar handheld with many of the bells and whistles to make scanning a real pleasure.

Just thoughts,

Dave Bernazzani

Well put! Many years ago I *had* a HAM licence but, after having to put up with so many individuals with a "High And Mighty" attitude I let it lapse. (I wonder just how many people did this?) Now I see almost the same `problem?' surfacing again with this rediculous `No Code' hoo haa. If this keeps up big $ will most likely triumph and there will be no more HAM bands.

OK... Now for *my* `take' on this `tempest in a teapot'. *I* don't see *anything* wrong with `code' itself. *If* an `op' wants to use `code' then s/he should be allowed to. (Just like those `ops' that are keeping AM alive!) However... *If* the HAM bands are to be kept `alive' we are going to need to get *a lot* more people involved! Now... With the proliferation of `alternative' modes of communications *other than* `code' in other areas of `life' it makes less and less sense for it being a *`major?'* requirement for a HAM licence. `Code' really never has been any `moral leavening or high ground'! `Code' has never eliminated `Lids/Bad Ops'. Neither has `building your own'! What will and does is `peer pressure' and `self policing' either done `kindly and gently' or with `appropriate?' stronger means up to and including loss of licence and equipment via `pushing' the appropriate `regulatory?' agency to action. There *also* should be a concerted approach towards reviving and updating the `Elmer' system. New ops, whether code or no code licenced, should be welcomed and guided by older and more experienced ops. (*And* there should be more of a sense of community whether or not *any* individual does or doesn't `meet?' nebulous `standards' of `perfection?') It *shouldn't* make any difference whether or not the op is an `appliance operator' or a `homebrewer'. It *shouldn't* make any difference whether they are a `coder' or `no coder'! If this particular hoo ha keeps up the HAM bands will eventually wither away and end up in the hands of big $. How many out there bemoan all the `strange stuff' that has appeared on and in our cars? However... We still `bite the bullet' and buy anyway. We don't try and keep our Model A four popper with the 2

circuit carb, manual advance distributor, and the lousy rings that barely seal. How many still cook on woodstoves? Nope! We either use `modern?' electric or gas stoves. How many still have and use `the little shack out back'? Nope! We have indoor plumbing! So... Why is there this insistance about `code'? Like all the other `examples' I've put forth there is both no `need?' for it *and* no real `roadblock' in place for those who want to use it/them. (I suppose that *someone* will try and bring up that `old chestnut' about being stranded with nothing but the `bare essentials?' and *only* being able to send `code' to be `rescued'. Given that even a lot of the `old-timers' have become `appliance operators' I *don't* think that it really `holds water' anymore. Maybe if you are someplace like East Baum Fouk, Egypt or some other `god forsaken' place you don't belong in the first place and don't have access to other alternative means of communications it *might*. But, with all the alternatives available these days, it's highly unlikely.) If the HAM *hobby* is going to survive its going to take putting aside this and other predjudices and get more people involved!

Doleo ergo sum,

nope, your scanner is OK. Get use to it! since the audio is not a solid
tone it locks up on it.....it will only work on birdies, dead carriers
and non-variable tone cariers.

Sorry!

>
> --
> --Patrick

Patrick,

The OS535 is designed to fit inside the Pro-2035/2042 and requires a rectangular cutout at the back of the case above the tape out, ext. spkr, DC pwr, and reset button to allow access to the OS535's RS-232C, NMEA, CI-V, and tape switch ports. The OS535 board has attached standoffs that mount the OS535 directly above the Pro-2035/2042 main board.

Electrically, the OS535 is connected to the scanner main board via new cables via CN1, CN2, and CN3. Then the cables from the scanner CPU board plug into the OS535 instead of the scanner's main board. Then two wires need to be soldered (or use pin line sockets to be able to disconnect at a later time) to the scanner's main board -- one at TP2 and the other to a point near Q10.

Anything is possible, so you could build 6 extender cables and extend the two wires coming from the OS535. Note that the cables originate from the CPU board, so some of the signals will have to be buffered due to the extended cable length. Finally, you would have to cut/drill a hole in the scanner's case in order to route the cables to your external project box. Now I believe we are back to something that you didn't want to do -- "making new holes". Sorry, it can't be done given your constraints. :>)

You said something about "the CHP's state-wide repeater system" could
you explain more about this system? I know San Diego has gone to a
simalcast system here in San Diego along with repeating the mobile
channel for all of the San Diego frequencies including the new Blue-1.

Thank you

Now Andy, don't be so paranoid as to believe that the NSA monitors hams.
They and the FCC have entirely different missions.

If my marine band xcvr puts out a spur on another channel, I won't get a
pink slip from the NSA, but I surely will (I did) get one from the FCC.

Blake Bowers wrote:

> You have a Commercial Radiotelephone operating license. So do many
> others, in fact my 12 year old son has repeatedly passed the practice

Yes you are correct Blake. The exact SAME license that Bill claims to
have. Well, not exactly, he claims to have the 1st Class radiotelephone
license & that it is currently valid. As you (should) know IF you work
in
the field, The 1st class licenses was discontinued 13 years ago &
replaced
with a lifetime General Radiotelephone license. All those with a 1st
class were allowed to grandfather on their expiration date. Apparently
he never did grandfather, perhaps because it was revoked with the little
run in he had with the illegal hi-power cb radios in the late 1970's.

So if your son know so much, how come he took the test? That would
really be something if a 12 yr old got his commercial license.

> It has so little bearing on Two way now a days, as it is not requred
> by the FCC anymore!

Not exactly true. It IS required for maritime two-way and aviation
two-way work, optional for land mobile two-way. Nearly all
two-way repair shops require something, the FCC commercial license,
NABER, or APCO. The reason it is optional for land mobile is
to allow felxibility like that.

> And what degree do you claim to have?

Master of Communications Technology.

> You have asked Bill Cheek all these questions, surely you will be man
> enough to answer them first!

I have many times. Infact, this is about the 3rd time you have
asked me what degree I have.

> You have mentioned MANY times to me in FIDO netmail that you have
> attended NUMEROUS Motorola training schools, yet you refuse to name
> ANY of them, or name ANY of the instructors!

Right, Blake, right. I have asked you the same questions & you have
not responded. You didn't even know exactly where the motorola
campus is or what building they mount their antennas on.

> While you are at it, explain why NONE of the Two way shop owners or
> managers in your area know who you are, when you claim to have all
> sorts of experince in the field?

Have you ever seen my resume???

No you haven't, so how could you check up on me. Funny, no one seems
to know of you either in the commercial field.

> TO THE NUMEROUS THAT HAVE SENT ME EMAIL ABOUT THE FAMOUS JOHN MACKEY
> JR POST ON FIDO "OOPS, I BLEW UP A HAM REPEATER" SEND ME YOUR ADDRESS

Well Blake send it to me at my fido address, I would like to see it
too. You have talked several times about a message of me blowing up
a ham repeater but then when others ask you for it you have nothing.
Please hurry, in a few days I will be adding you to my twit
filter in both the fidonet & internet programs.

> AGAIN, I WILL SEND YOU COPIES OF THAT, COPIES OF OTHER STUPIDITY HE
> HAS POSTED, AND OF COURSE, THE SPIN MANY HAVE ON HIS VOTING FOR
> HIMSELF ON THE FIDO CB RADIO ECHO FOR MODERATOR, USING A ALIAS FROM

Really, what proof do you have of this? If I was voting for myself
using aliases, then why did I quit the race BEFORE the election end &
why did they make me the asst moderator?

You really like to stir up trouble don't you Blake? Just about
two weeks ago (the last time I received a fido netmail from you)
you & I buried the hatchet I thought. So why do you want to fight
again? You know you lose every time.

: If there are "unlock" codes for the software, fine....but the user
: won't know how to get them. And besides, hundreds of bucks for a
: cellular mod? You've got to be kidding?

Technically, I don't think the OS535 is illegal. The TDDRA only convers radio receivers, and the OS535 is not one. And installing an OS535 is not under the TDDRA's definition of an "easy" modification. Easy mods are defined to be cutting out a component, replacing a plug-in chip, or reprogramming by attaching a computer.

Sure, they are not going to advertise the unlock code, but I'm sure they aren't too upset that MT published it in large type a few months back.

738. Pro 2035 and OptoScan 535. Do they work wll together?

Newsgroup: rec.radio.scanner
Date: 1996-10-09 00:00:00 UTC
From: Rob Kling <rkling@umich.edu>
Message-ID: <325B9334.4942@umich.edu>
Source record: 220820

I am interested in knowing what happens to my 2035's memory when I use the 535? Can I program the onboard 2035 memories from the 535? Can I
use the 2035, without a computer, when I have a 535 installed? I mean I spend 300 dollars for 1000 memories, I would like to use them:)
From talking to Opto Electronics people, I am starting to think I could buy the 535, attach a PLL and I could have a radio!

The 2500/3000 battery pack is the worst I've seen, and only detractor for these 2 scanners. I recently replaced one insert with a locally obtained lower current batteries which only give me 3-4 hours use/charge. I made one good extra battery by salvaging the good cells from the 2 inserts and making one half decent one. These batteries should have lasted more than the 18 months I've had them. I use the charger after complet discharge approach and still have 4 shorted cells after 18 months.

BTW, don't leave the charger plug in the jack if you use a timer to shut off the charge cycle. I did this so the pack would be fully charged while at work only to discover the battery discharges thru the charger when not plugged in to the wall charging. This is a poor design, a blocking diode would prevent that from happening.

I hope Uniden gets their act together and comes up with an AA replacment pack or at least incorporates AA alkaline cell capable packs in the future.

>Are there any frequency lists for the area around Vancouver, BC,
>Canada that are available online?

I picked up a fantastic frequency list for all of Canada (literally).
Shows every unprotected station! (ie. everything except police). You'll
get frequencies you never thought existed.

Drawback: It's in 22 parts and totals about 100MB.

You can go ftp it at spectrum.ic.gc.ca/pub/TAFL. There are two different
versions of the Technical & Administrative Frequency List there. One is
in tar and the other is in ZIP. You'll have to try hit-n-miss when
downloading parts--there's no indication of which parts are which until
you get it opened up and looked at. I can tell you that #5 is the mid 150
mhz area and #12 is around 411-416 mhz.

|>Just thought it was an interesting piece of news to pass on to all the
|>radio enthusiasts.

|>au

THIS can only be good news to SW pirates / free radio enthusiasts.
As long as they are not interfering with other services, I seriously doubt
that the FCC is going to bother ANYONE on HF with a moderately powered
signal that does not GRAB the whole world's attention.

I tried to contact the FCC monitoring station in Laurel, MD a few months ago
about a deliberate interference problem I heard on the ham bands.

They ignored my FAX.
They didn't return my phone call messages.

If there IS anyone left in FCC monitoring, they are likely too busy with commercial work to want to fool with SW and FM band pirates.

Happy listening!

Bry

Rob Kling wrote:
>
> I am interested in knowing what happens to my 2035's memory when I use the 535?

You will lose everything in the scanners memory only during the initial installation of the OS535. Nothing happens to the Pro-2035's memory, once the OS535 is installed and your frequencies are reprogrammed. The memory stays the same as it was prior to running with computer control. The controlling software (Scan*Star, Probe, Radio Manager, Scancat, etc. -- all optional) and your computer are the virtual memory for your Pro-2035 when under computer control.

> Can I program the onboard 2035 memories from the 535?

NO you can't. This is a major down side of the OS535. You'll need a CE-232 to program the Pro-2035's memory via your computer. Both the OS535 and CE-232 will work with the Pro-2035, but only one interface at a time can be used. I'd recommend an external installation of the CE-232 so that it can be used with other applicable scanners (one at a time) if need be.

> Can I use the 2035, without a computer, when I have a 535 installed?

Yes, the Pro-2035 will work exactly like it did before the OS535 was installed -- when it is not under computer control. Memory intact and lacking coverage in the cellular area of the 800MHz band.

> I mean I spend 300 dollars for 1000 memories, I would like to use > them:) From talking to Opto Electronics people, I am starting to think > I could buy the 535, attach a PLL and I could have a radio!

Don't they realize that you already have a radio? :>)

>
> Rob Kling
> N8YBV

Some notes/recommendations from my OS535 installation experience:

The manual is pretty straight forward. Two things that I would suggest are to use a new nibbler, (R/S P/N 64-823), and to wear some work gloves while doing the nibbling of the metal case. One other item, you may want to tack down the two wires on the OS535 using a Dual Melt glue gun (with dual melt glue) in the low temperature mode. Works great and you can remove the glue easily (peels right off) if you need to. Finally, you may want to buy some silicone heat sink compound (R/S P/N 276-1372) to use under the voltage regulators to the scanner frame prior to

reassembling the unit. Just take your time -- the hardest thing is nibbling out the rectangular opening in the frame.

Hope that this helps,
Scott

Steve S wrote:

> Actually, the president's aircraft uses classified and rotating
> callsigns when overseas.

Absolutely wrong. There are a few static callwords used in addition to the AF1 callsign, but they're user & circuit-specific, & not used for ATC/ARTCC stuff.

> His trip to Bosnia was not "trackable" by
> callsign.

I doubt this. Of course AF1 movements are monitored very closely by the USA's national technical means and there are systems & plans which would attempt to protect the aircraft from any threats. But my understanding of the philosophy they use is they make it clear approximately where the aircraft is for the simple reason that it will help prevent 'incidents' or 'accidents' such as a nation launching interceptors for a visual ID, etc. You didn't elaborate on whom the AF1 flight to Bosnia wasn't trackable by, but I think that all legs of it in civil-controlled airspace would be trackable by civil ATC. If I recall right, he used a C-17 for the last leg of the flight.

Your claims of classified tactical calls & stealthy flight plans were certainly considered long ago, but were ruled out for a variety of reasons (I'm discussing routine Presidential airborne movements, and not using a C-20 for National Command Authority evacuation or E-4B for the 'Nightwatch' mission). Everyone knows who is on the plane, & roughly where it is. Friendly & hostile nations will keep out of the airspace -- if AF1 has some catastrophic mechanical failure & crashes & burns, they don't want to have had any military aircraft of theirs even close to the AF1 airspace buffer!

> Do you actually believe the State Department or Treasury

: codes into it's memories, some of these codes are in the 'locked out'
: freqs, and the scanner will scan them. The problem is I was under the
: understanding that after these test codes were in the memory banks you
: could direect-enter any frequency, but this doesn't seem to be the
: case. Was this limited to an earler release of the scanner?? Mine is
: about 8 months old.

From what I've been told about the mod, there's no direct entry
for the blocked out bands. WHat you have to do is find the frequency you
want by going into the channel that has an "unblocked" frequency that's
int he same range, do a direct search, and when you find it, store it into
a monitor memory. And from there, you have to program the frequency from
the monitor into the channel you want.

I will be staying over in Miami for a day before heading out to vacation, and would like to listen to my scanner in the BIG city for the time I am there. Would some kind scanning Miamian (?) please help me out with a list of good active frequencies to listen to while I am there, such as law enforcement, fire, ambulance, feds, etc?

Any help would be greatly appreciated, including any radio codes, unit identifiers, etc? Please?

770. Scanners on a Cruise???

Has anyone ever taken their scanner with them on a Cruise? Vacation time is coming up at the end of the month, and the wife and I are off on a 7 day Carnival Cruise of the western Carribbean on the Imagination, and I am wondering if I could/should take my AR8K/Scout combo.

In the cruise guide, the mention ship-to-shore telephone as well as inmarsat telephone, could these be monitored? I am sure ther must be other radio communications aboard ship as well, with a crew of over 900.

How about in the ports of call? would I run into any problems with local laws regarding scanners? Would there be an above average risk of theft from the ship if the equipment is left in my stateroom?

Does anyone have any frequencies to share for Carnival Cruise lines, or for any Western Caribbean ports, e.g. Cozumel, Ocho Rios, etc?

>bc2500xlt, for $350. Is this a good deal?

For around the same price consider the BC3000XLT which is the update
to the 2500. I guess the 2500 had some problems with images and
intermod but the 3000 with triple conversion greatly improved this.
Good coverage, fast scanning, auto search and store, per-channel
selectable delay of 2/4 seconds, 400 channels in 20 banks, 10 priority
channels.

Battery life is fair at best.

OH, and yes, it will get mil air along with just about everything else
you might want.

Radios Shack offered 2 scanners with 1000 channels. The PRO-2035 and the PRO-2042. They are quite similar, with only a few minor changes. The PRO-2035s are discontinued now, so if you can find one it will be less expensive than the PRO-2042. Radio Shack sells the PRO-2042 for about $400. Try searching for their home page...they may have the exact price. Other vendors, such as Grove Enterprises, sell them for a lesser price. I do not own them, but most of the articles and comments about them have been positive.

>I have yet to find a web site with a lot of pro-2006 mods and add ons..

How could you? There are only two simple and easy "clip-a-diode"
hacks, after which the remaining several dozen possible mods all
require some level of essential savvy on the hacker's part, but more
importantly considerable effort and time on some writer's part. The
requisite graphics, photos, charts, tables, and text take a lot of
bytes and cannot be easily conveyed in ASCII text.

> can someone e-mail, or post the smeter mod? All the web pages seem to have are
> cell restoration =(even the 'official pro-2006 sites"

Do an article base search in this newgroup - I posted that article not
too long ago. Even it, simple as it is, took some time and effort to
compose for ASCII media.

I'll be glad to answer specific questions, if you have any.

>> What else?

>Optoelectronics OS535 is a MOD and will allow cellular when computer
>controlled.

Oh no it won't! That would be illegal for them to peddle it that way.
If there are "unlock" codes for the software, fine....but the user
won't know how to get them. And besides, hundreds of bucks for a
cellular mod? You've got to be kidding?

Also.....Mr. Slaten asked for "the mods" for the 2042. That strongly
implies he wasn't looking for a commercial thingamabob.

From what I understand, when the system went down they were still able to
talk simplex to each individual station, so the radio traffic came in and
out of there after being directed I guess by phone from the LAPD dispatch
center. This is how LASO works as well, each station has thier own 911
desk, and they route calls from Sheriff Comm Center to the individual
stations routinely instead of having the dispatchers there handle them.
I'm not really sure on all the details of it, but I have a friend who
works the desk at a LASO station and I think that's how he expalined it
to me.

Source record: 220571
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was watching an old rerun of Emergency! and looked up the call letters
they were using KMG-365 and they are actually used in LA where the show is
based and where all the incidents take place with a unit called Squad 51
and Station 51.
Anyone else come across this on a TV show aside from Cops or Rescue 911?
.
One other question what sections of LA does KMG-365 Cover and is there
really
a squad 51 Rescue/Paramedic unit in LA County?

Just Curious

The "strange noises" are probably one of two things, either the
transmissions are encrypted, in which case you're SOL, or you're
hearing the data transmissions for the trunking system, which are
annoying. If it's an "in the clear" trunked system, there's no
particular reason you shouldn't hear it, assuming you're within range.

Mark

The truth as I perceive it to be.
Your perception will be different.

Maybe the freq's are not working. Because they are on a piece of paper only means that they are scheduled to be installed in the future. Program in their normally assigned freq's and see how much traffic is coming on ... if a lot, then they are not on 800 yet....800 is a major expense and lots of communities cannot afford it...but they assign the channels years ahead. We have four agencies here in the Bay AREa with 800 assignations and they don't have the money for the installation. OR some stupid city worker reminds the people in San Fran that BUrma is on the list of countries that SF does nto do business with and Motoralla and Erickson do bus with Burma and now San Fran is playing "world cop" by not installing the 33 million system as fast as they were to have because of the USA company doing business with Burma....a country just outside Communist China, whom the merchants of San Fran are allowed to import goods from this slave labor country...all with the blessing of the mayor: King Willie.

You figure it.

Call you local newspaper photo or news desk and ask them if they get pd on normal or 800 channels....

Call 18004768050.....Scanner World...your above is on sale for 159.99. Not my first choice of scanners.

Damark....get their 800 number from 800 operator and ask for a catalog...they have a bcat 120xlt on sale for 99.00...great buy if you don't need 800...

or the bcat 16 channel desk model for %60...dollars....good scanner, very reliable. I use it for CHP in my JEEP. Great for low freq and high freq listening. . not too good with 488 and in this range...don't get both sides all time

Don't forget Grove Enterprises...they have an 800 number too...nice source of books on scanning. Scanner World same....GE's prices generally lower than SW.

: to get better? This is the same thing. We need to keep the pressure
: on him a little longer to make SURE Bill gets the point. How many
: times has Bill been in the middle of a flame war? -several-

: Bill is VERY persistant, only persistance will resolve him.

Interesting analogy. however, if Cheek is only taking a vacation, he
will come back full force, no matter how much persistance. If he has
stopped participating, then there is no need to carry this on. I am
wondering why he has stopped... Did he decide to try the truce idea?
Did he die over the weekend? What ever his reason, he has stopped.
Even if Bill Cheek never comes back, there seems to be too much
polarization between two sides who really have nothing to be fighting about.

Oh well. I still support everyone's right to post their opinions, as
well as every one else's right to ignore them . . . as opposed to those
who say "golly gee, can't we knock it off?" To them, I say ignore the
posts from Mackey et al... Censor your own reading, not the NG. That
is what I intend to start doing (and this time I mean it!) :-)

It's a 75 kHz filter, I'm told, which isn't wide enough for music. Works OK for voice. Not well, but OK.

>much better. The two I played with were not very sensitive on bands
>outside the 2M/440 amateur bands. I'm not sure how good it is in the
>800-999MHz range - probably not good.

I have no problem hearing OKC FD and PD from Norman, a distance of ~20 miles. PD is VHF Hi, FD is UHF. No experience with 800, as I don't listen to the OK Highway Patrol.

>Only 1 priority channel. Many scanners come with more than 1 priority

Sort of. You can use the "dual watch" as a crude priority.

>Alphanumerics are very nice, however.

Yeah, but they could have used 5 characters instead of 4 (the fifth is there - press PTT out of band to see it).

>but it's not necessarily a great scanner. The WFM is poor. No data

But it *transmits*.

>112 channels (yeah, that's a lot, but many feel strapped with less
>than 200 and many hams will fill up channels with repeaters, etc).

Nah. I use it for scanning 80%, ham 20%. Only have a dozen or so repeaters. Rest is Fire, EMS, PD, etc. And, it transmits.

>The FT10 has banks which are hard to set-up and I *think* the FT50
>doesn't do banking at all - a major drawback for scanning. It lacks

Agreed. No banks is not good. I haven't played with the software (a coworker a few cubes away has it). That would be the only way to enable banks. It does let you have 6 search pairs though and there seems to be 4 "bands" for each of the 2 VFO's. It does transmit, though.

>search and store features found on radios of comparable price.
>Coverage starts at 76MHz or so and so older police/fire in the 33MHz

A problem in fewer and fewer places.

>Mass). No selectable delay.

<shrug> Haven't noticed this as a problem. It does allow you to change when the scanning resumes, though, which I've never seen on a scanner. Choices are carrier drop or 5 seconds. Did I mention that it transmits?

>BC3000XLT or similar handheld with many of the bells and whistles to
>make scanning a real pleasure.

It's an HT, not a scanner. But it's not as big a compromise as other HT-scanners. I find that I leave my BC3000XLT at home a lot more now.

You didn't mention that the audio level and quality is superior to the BC3000XLT, nor did mention the fact that DCS (digital PL) is built in and that CTCSS decode (encode is standard) is available with the optional keypad (which also has a digital voice recorder).

This "Code vs. No Code" stuff is getting old. Why do so many see it as such a black & white issue? The way it is now makes good sense: code proficency is not required to get access to the bands on which code is not used; but is required for the bands where it is.
The percentage of jerks into amateur radio is very small. Some are "no codes", some have higher class licenses. Thay are the same in one aspect; they are intolerant of those who disagree with them and are sure ham radio would be better without the others.

Ken:

I don't know the exact answer to your question, but here is a guess.

In old time scanning the 'high band" was 150-170Mhz

The CHP, in addition to their extenders on 154.905, can also operate
on several other "high band" frequencies such as mutual aid freqs
155.475, 156.075 and CLEMARS 154.920 and 154.935.

CHP offices are equipped to operate on other State frequencies such as
the Department of Justice 154.680 and 154.665 as well as Fish and Game
Dept. freqs.

Given the broad scope of the investigation into the window smashing
they may have been using some of these freqs. for coordination with
other agencies and for security.

From: Steve Garber <smgarber@primenet.com>
Message-ID: <53jvob$t8n@nnrp1.news.primenet.com>
Source record: 220582

Anyone suggest a good scanner antenna for apartment/townhouse applications? I would really rather not be limited to using the whip antenna supplied with my scanner (horrors!)

Thanks,

Steve

818. Disable "beep" on 2006?

<jreid@aloha.net> wrote:

I know that many people think that the FCC was and continues to be a royal pain in the _ _ _ but I for one will miss some of the support that was received from the FCC in the past.

As society becomes more and more dependant on using the RF spectrum as a vehicle for communication and other activities, we need to ensure that the frequency spectrum is MANAGED in such a way that all of us may use it in one way or another. Key word is manage, which to me means the focal point for activites. What kind of activies am I talking about?

I gave up on CB about 6 months after the FCC killed the license requirement for that activity. The activities I encountered while listening/participating (at the time I was stationed in Hawaii) were rough to say the least. (Linear amps with sideband splatter 3 channels either side of the base carrier.) Perhaps I will get my ham license someday, provided that it too doesn't go away.

As a boat owner, I carry a hand held Marine VHF. The FCC has done in the majority of the license requirements for operation of Marine VHS as well. I can't wait to hear how out of control that band will get, considering that Marine VHF is often used for life support activites.

The Livermore, CA monitoring facility (one of the ones which is becoming automated) is less than a mile from our RC aircraft flying field. We have obtained the assistance from the FCC staff at that facility to help resolve issues with RFI problems several times in the past. Where are we going to get real time assistance in the future? Philly?

Questions for all; Why are these facilities shutting down? Why has the operations budget been reduced to a point where they can no longer do the job as defined by the charter? What is the impact going to be on all of us?

820. Dole back in NJ Sunday the 13th

Newsgroup: rec.radio.scanner
Date: 1996-10-10 00:00:00 UTC
From: "L.G. Shirley" <lgshirley@worldnet.att.net>
Message-ID: <325DA5D6.37F8@worldnet.att.net>
Source record: 220585

Prez candidate Bob Dole will be back in New Jersey this Sunday. Hoping for better weather I'm sure. He will start the day in Newark acoording to a news release.

He'll start the day in Newark at the Columbus day parade at noon. Then he travels. It's unknown at this time if it's by bus again or when he'll take to the road.

Somerville is the first site mentioned on his afternoon tour and he should be going to the Somerset County Courthouse. This should attract quite a few politicans and congressional contenders were among those mentioned.

Later, he will go to Hamilton, NJ scheduled to speak at the gazebo in Kuser Farm Park. This might be a good opportunity to search for some new freq's in use by the USSS. Last time they only used "Mike" 165.2125. But keep 165.5125/166.4875 and 165.6875/166.800 the two main Newark office freq's in mind, all 4 can be used simplex.

The NJ troopers will once again be involved. Try scanning both troop B and C trunking along w/the freq's mentioned in the 1st post no matter how Dole travels, bus, helo, car.

Somerville uses 155.310s as its main ferq. They probably will have help from a nearby town. The SPEN's may be used. I've found the use of itinerants and business freq's used in Somerville for some events like the Tour of Somerville.

If anyone gets a chance to monitor, keep the 464 & 469 freq's I believe Dole's people used at Milltown in mind again. It looks like his campaign people have set up shop in Somerville already. 464.500 464.550 469.500 469.550 both simplex and rptr use.

Hamilton Township uses the 453 band. But search it for hidden any hidden freq's and don't forget the 458's which might be used as simplex also.

Has anyone else Nationwide found the campaigns using their own two way radios? That would mainly be Perot and Brown. I only saw cell phones during Perot's NJ visit during the '92 election.

Regards,
LGS

From: kcc007@aol.com
Message-ID: <53kaef$6tc@newsbf02.news.aol.com>
Source record: 220587

I am trying to put together a mobile scanning rig and remember that someone(bearcat?) made one that was like a flat square. Looked like something that you would see in an emergency vehicle. Like:

```
[---------------]
[ XXXXXXXXXXXX ]
[ X SCREEN X ]
[ XXXXXXXXXXXX ]
[ O O O O ]
[---------------]
```

(Sorry if the picture does not look like a square due to the proportional font)

It was flat not like the normal rectangle shaped box on most scanners.

My question are:

What Scanner was this?
How good were they?
How much do they cost and where can I buy one?

Thanks in advance, feel free to E-mail me at kcc007@aol.com or post it to the group.

Is this a scanner that was bought NEW for $210.00?

For Sale like new AOR AR-2700 scanner. Haven't sent warranty card in.
Only used 4 weeks. Bought new mail order and thought it was a little
smaller and lighter.

500Khz to 1300 Mhz. NFM, WFM, AM.

Not modified haven't even taken the cover off. Comes with:

Cig lighter plug
Two anetnnas
Belt clip
Box and warranty registration card
Nicat batteries
Charger

$250.00

I have both and use them on 2 different scanners. I think the three-vertical ground plane works better than the discone. Where can I get a vertical resonator for the discone to improve the low band reception. Also can anyone give me more details about making a scanner directional beam antenna from a TV antenna.

>So what message might that be, John?

The IDIOT Mackey talks but is just a little girly boy hiding behind a fake mailer. He knows he could never hold onto an account if he posted by normal means. Everything the IDIOT posts is a reflection of himself. He has admitted to having to pay for sex, smoked somebody's repeater system, smoked his own UHF system and can't even install an antenna without it crapping out in 10 days. This IDIOT Mackey then questions others technical skills. Warning, don't let the IDIOT Mackey touch your power supply. He don't know positive from negative.

Someday we can get the message to the IDIOT Mackey.

The IDIOT Mackey - 78
Cheek - 13

I just bought a used Optoelectronics CX 12 (Not the CX 12AR) interface. The guy also gave me the FFC adapter for the 8000. Does this make it a CX12AR now or are there internal differences between the CX12 and CX12AR? The CX12 lets me upload and download info the the 8000 but I have problems when I use it scanning on the PC.
I have a stereo cable going from the "Data" jack on the FFC adapter to the first jack on the CX12 and another stereo cable from the "Squelch" jack on the FFC to the second jack on the CX12, and it still won't work. I do have the switch on the correct setting. Is the CX12 capable of using the squelch signal?

Interesting, you are posting under an alias & won't let your
e-mail address or full name or callsign be known.

Perhaps you should ask the licensee of that repeater at the
time, Justin Bousquet KC7FFX (now AB7NG). He asked for my
assistance. (Wayne didn't own the repeater, he owned the
power supply which is all that smoked) Perhaps you should
ask Wayne why he wired up the power supply with the positive
(red) & negative (black) leads reversed and NO fuse
protection in the system!!!

Now who's the novice, FOOL?????

Source record: 220603

On October 12, 1996, the Palo Alto Amateur Radio Association (PAARA) will hold its 45st annual auction and flea market at the San Mateo Shriners Center, 1925 Elkhorn Court, San Mateo, CA. Doors open at 7:30 A.M. and the auction will start around 9:30 A.M.

Ham radio gear, electronic parts and test equipment is likley to change hands at bargain prices. Raffle prizes will be offered and coffee & donuts will be served. All in all it will be a lot of fun for those of you who have the post Foothill Flea Market blues.

Flea market table space is available at $10 per table. Auction charges are 10% of the sales price (buy-back subject to $5/max. charge per lot). Equipment donations are welcomed by the club. Proceeds benefit PAARA.

Directions to the Shriners' Center. From HWY 101 or 280, take the HWY 92 to the El Camino Real South exit. On the El Camino Real travel to 20th Avenue, where you'll turn right. One block and you'll see Elkhorn Court. Talk-in frequency is 147.45 simplex.

Please, note the location this year ... it is in San Mateo. See you there.

Koert KC6WCI

I don't. I send the post back to the posters sysadmin (postmaster@xxx).
For every 3 I send back, I get about 1 reply saying that the account has
been canceled. Perhaps the others get acted upon.

Furthermore, I have started copying the post and sending by FAX a copy to
the local office of the USPS Postal inspection service. I don't get
anything back, but maybe they can help.

TO ALL INTERESTED PARTIES. I AM CURRENTLY WORKING ON A DETAILED LIST OF ALL ACTIVE FREQUENCIES IN AND AROUND THE PORTLAND AREA AND WILL SOON PUBLISH THIS WORK. I CURRENTLY HAVE OVER 300 LISTINGS INCLUDING PORTLAND POLICE, FIRE, AND MEDICAL AND MORE. I AM NOW WORKING ON GETTING PORTLAND PROGRESS AND E.I.D. FREQUENCIES. ANYONE INTERESTED IN BUYING MY LIST CONTACT ME AT:
SCANNERMAN@INETARENA.COM
FOR THIS LIST I ASK FOR A $5.00 DONATION. DON'T WAIT FOR THE BOOK, IT WILL BE MORE EXPENSIVE.
I HAVE FOUND THAT THE POLICE CALL BOOKS WERE RATHER VAGUE IN TERM OF WHO IS USING THEM, I.E. TRUNKED SYSTEM, OR BUSINESS BAND. MY LIST OF FREQUENCIES HAS THE COMPANY NAMES ASSOCIATED WITH THE FREQUENCY THEY ARE USING AND BELIEVE ME, THERE ARE MORE INTERESTING ONES TO LISTEN TO BESIDES THE POLICE.
THERE MAY OR MAY NOT BE MISTAKES THAT I HAVE MADE WITH THE LISTING SO FOR THIS REASON, THERE ARE NO REFUNDS, HOWEVER, I AM SURE YOU WILL NOT BE DISSAPPOINTED, BUT I CANNOT GUARANTEE THAT.
GET YOUR COMPUTERIZED PRINTOUT NOW BEFORE THE BOOK!.

In reference to the coaching staff, the communications from the press box coaches to the on the field coaches are hard wired. Occasionally you will notice in a game that the system is out for one of the teams (someone unplugged or tripped over a wire, I suppose), when that happens the rules state that the other team must stop using their commo equipment until the other's is fixed. Occasionally the referees will announce this to the crowd, just like a penalty announcement, and sometimes they dont, but a TV crew that is on the ball will notice and mention it to their audience.
If the origi

The Opto535 sold in Canada and probably elsewhere will tune cellular without need of the unlock code. The code is relatively easy to get, in any case. It is often posted here. Buying an Opto just to get cellular doesn't make sense, though. The real value is computer control--the cell ability is just a bonus.

>
> Also.....Mr. Slaten asked for "the mods" for the 2042. That strongly

Seems that way to me too. What surprises me is the number of people who buy expensive scanners like the 2035 and 2042 and after the fact ask about mods. When I spend that kind of money, I like to do my investigating before getting out the plastic!

No, you can't program the scanner. Yes, you can use the scanner, even with
the Opto installed and without a computer. The number of channels in the
scanner is irrelevant when you are running it by computer. The interface
will allow you to decode PLL and DTMF tones.

>military aircraft . I am looking at a
>bc2500xlt, for $350. Is this a good deal?

Not for the BC2500XLT which was a poor product from Uniden that suffered from Intermod and poor battery life. The 3000XLT that replaced it (looks the same) is the far better receiver although with the basic same features 25-550MHz & 760-1300MHz (less cellular).

You should be able to get the BC-3000XLT for $350 which would be a far better choice although if you have a little more to spend take a look at the UBC-3000XLT from somebody like Javiation in the UK (http://www.demon.co.uk/javiation/) which will give you full 800MHz and not be blocked in anyway

Good Luck
Harry.

I placing the follow-up line to news.admin.net-abuse.misc in the hope of ending this spam.

The trouble is that most of these idiots actually believe this. The penal code here in California uses the phrase "endless chain" to speak about pyramid schemes, and there does indeed seem to be an endless chain of idiots to post these things.

(even though the scheme fails because if you start assuming that any reasonable per centage of participants get a reasonable per centage of the claimed payoff, you soon reach a contradiction of the form "more people have sent in money than live on the face of the earth".)

It occurs to me (with tongue firmly in cheek) that pyramid schemes are sorta on topic in rec.radio.shortwave, since one of the topics of r.r.s. are international reply coupons, and one of the most famous historical uses of IRC's was in the infamous pyramid scheme of Charles Ponzi in Boston in 1919. (The scheme collapsed when one of the Boston newspapers figured out that Mr. Ponzi must have bought 3 times the world's supply of IRC's.)

871. Info: Pro-37, 800 Mhz lost (after cell-mod) *FIX*

Newsgroup: rec.radio.scanner
Date: 1996-10-10 00:00:00 UTC
From: bluedot9@aol.com
Message-ID: <53j39d$n5l@newsbf02.news.aol.com>
Source record: 220738

Here is the information regarding the loss of 800Mhz after a cell restoration mod is done on a Realistic Pro-37. This may also be compatible with the Pro-34, but I haven't come across a '34 in awhile.

*****Symptom:

My Pro-37 does not pick up anything on 800Mhz after cell restoration. What should I do?

*****Diagnosis:

I have come across at least three Pro-37s all with 1991 type date codes. After cell restoration, it became evident that the receiver did not pick up *any* TXs on the 800Mhz range, including the non-blocked portion.

The problem I saw was a solder connection between a pass through connection and a ground.

*****Restoration:

Remove the rear case of your scanner. Do this by removing the four screws on the exterior of the scanner, vol. and squelch knobs. Press the bottom of the scanner so that the barbs release and then push up (press on the side of the battery area).

Once the case is removed, position the scanner with antenna jack, squelch, and vol. knobs facing away from you (upwards).

Look in the vicinity of the lower right-hand hex post (where the exterior case screw connects to). There should be a blue TC106 component in the region. Look towards the left about 5mm and then down 5mm. You should be looking in between the Q119 and Q121 silk screened characters. This region should be a ground pool with a gap allowing a pass through connection labeled 'B.'

If this 'B' connection is grounded (via a solder connection!) then you have found the source of your misery. Use a soldering wick to remove the solder and then clean up the area--to make sure that there is no solder bridge remaining.

*****Test:

Reassemble scanner and then power up. Test your remedy by pressing MAN, 8-7-0, and then the Up-Arrow. You will now hear your community jabbering away about nonsense. Enjoy!

Dave
(Scanner Flatulaire)

If this does not remedy your situation, then trace the underside of the board and check for other solder bridges on this path to a ground. This would cause the same problem. Be careful, you could get disoriented and them desolder something else. Only look for solder bridges.

872. Re: Yaesu FT-50R as a scanner?

One nice little scanning feature that is available on the FT50 that I wish I had on my 3000 is the ability to scan and have the radio hold the signal only five seconds before it continues to scan. This is great, especially if you include 2m repeaters in your scan. Your radio doesn't get hung up on long winded conversations but at the same time lets you know the freq is active.

Without a bank system though, the FT50 fails as a scanner. It is a great radio and it has helped me out a lot by not forcing me to carry a scanner and an ht at the same time. The small size is nice also.

I also wish the WFM mode worked, but oh well - you can't have everything. I don't listen to the 800 band a lot, so I really can't speak of its performance there.

I like my FT50 and would feel comfortable recommending it, just not as a scanner.

>
> Thank you

The statewide system used to belong to the California State Police,
until it was disbanded a litle while back. In southern Ca,
the repeaters sit on 460.375. In central and northern Ca, the
repeaters sit on 460.450 - except in the Bay Area, where the freq
is 453.825. A variety of state enforcement operations use the
system with the CHP playing net control (not all the users are
happy with the new arrangement, but that's another can o' worms).

Most CHP units do not carry 453/460 radios (some do - presumably
supervisors, etc --- I saw a CHP unit the other night that had
5 antennae, a low-band, a UHF, a VHF-Hi and 2 800 MHz).

LAPD has dropped this frequency into their new radios, and occasionally
use it for liason with CHP dispatch (to report disabled vehicles, etc).

That's the short scoop --- enjoy!

Hi, I am new to the whole scanner thing and would like to pick up my local Police Dept. I have a list of their frequencies and they are all in the 853.0000 to 855.0000 range. I have an SC150 - Uniden Sportcat scanner that will recieve in this range, but I don't ever seem to pick up anything but some strange noises. Can anyone help me with this? Also, now that I have gotten into this, I am enjoying it and would like to know, aside from Radio Shack, where I can find quality handheld scanners. Any recomendations?

Thanks

Don

Last I looked in US Federal Law felons could not own a gun, hand cun, shot gun, or otherwise, but most of the gun play situations I have run into in NYC, Boston, Philadelphia, Miami Beach and East Palo Alto have all involved a felon who could not have legally got that gun.

In New York City it is a crime, on the books, to own an unregistered bullet proof vest if you are not in law enforcement or Emergency Medical Services. I find this funny "Gee officer, I didn't mean to beat that person to death with my bullet proof vest" I was asked to remove my vest in a prison by deputies because the vest could be seen as a weapon???

I use the same radio, with the same problem. The way I solved it was simply not using ANY antenna.

The radio seems to be sensitive enough w/ no antenna to pick up just about every thing, but with NO overload
problem.

This worked for me at both New Hampshire (1 mile) and Pocono (2.5 mile) and I had no problem hearing both
sides of just about everything.

Thanks!! I only wish it would be possible to hear other channels.

Great stuff, only wish they had a better receiver.

Thanks for sharing this. A great bookmark to have.

Something wrong with email? Hay I'll start here if you want.

You never bothered to email me the above, you posted your stupid
remarks ignoring your own words and later posted a follow up to the
original post yourself. What's your problem?

If your looking for an argument, you're going to have to try harder...
So far your off to a bad start.

It can be modded for full cell coverage, but not military air (200 M).
Sorry.

Mark

The truth as I perceive it to be.
Your perception will be different.

>
What type of scanner do you want (Handheld or Base)? What is the price range
you are looking at? How large or small an area do you live in (NYC vs Boringville)?

You may want to take a look a Police Call or a Frequency Directory for your area. By doing this you can at least get an idea of the minimum number of channels
necessary for PD, FD, EMS etc.

Then also consider if you will need 800Mhz and if you are near an Air Force Base
you may want Military Air (225-400Mhz which adds cost to the scanner).

Answering at least the price range will give us an idea of what to recommend.

Good Luck
Jeff

I don't believe there is any way to mod this scanner for mil-air use.
You can do the 800 mhz mod (cell) if yours is blocked. You need to get to the
bottom board and clip D-11.

Guess what?

I just called the local MENSA Organization(which happens to be the National Headquarters), and they said that Bill Cheek is not an 'active member' of MENSA.

Yes, I know...non -'active member' can imply that he may have been active at one time, but this is for the sake of alleving those which the "burden of proof" lays upon.

**********EDITORIAL STATEMENT**********
I know ~10 people which are members of MENSA, ~5 of which I grew up with, and others I met while in college. Three of those people which I contacted agreed and stated that he shouldn't be saying that he is a member of MENSA if he is not active.

This all came about during a cycling-club meeting, which has nothing to do about internet, scanners, or flames on Usenet. I just threw it out to 'open discussion,' and this was the overall response I received. No names were involved, and no pre-judged character definitions were imposed.

Asked question: " What do you think about someone using MENSA membership as a credential when he is non-active?"

Dave
(Scanner Flatulaire)
('Mensa,' in spanish, means : the female gender form of IDIOT!! 'Menso,' of course, is the male gender form of IDIOT.

Note: I am not supporting any side on this credential business. I am just stating fact. BTW, the reason I called up MENSA is because I happen to have a lot of time on my hands (which I am very proud of...being able to do my work, make a decent income, and still have more time than I need).

Oh, most (not all) MENSA members are usually very introverted and 'intellectually snooty.'

Hi guys...

Does anyone out there have a manual for the Realistic COMP-100 scanner? Or maybe even just the programming information on it? The COMP-100 is a old model which uses binary code (toggle switches) for programming its channels. So what I need is the chart of frequencys and binary codes that it assigns with them.

If anyone can help me out please drop me a line...

Thanks

knock, knock.....

whoa ?

pithy, pithy

slow

What a bunch of bull-burgers. Gee, making the group safe
from "reality". I agree, Mackey is the idiot he is. The Cheek
Guy don't like takin crap from no one, especially the idiot. But
gosh, gee....what harm are they doing you?

You have choices. You know what they are. Why threaten-imply
when you have the answer before you...?

You are not being spoon-fed forced to open your eyes beyond
the Subject Lines....they are not doing false advertising and
surely not sending you "FORM-Junk E-mail" with their "message"
on it taking up your space uninvited.

Get a grip. Choose to read the post or just keep in clickin'
until you see "scanner stuff" and then "click" and be saved.

Come on people. The Cheek-Guy and the Idiot have a life to
live here on the internet. Let them alone. I can choose to
read the IDIOT or not. It don't harm me not to read it. I
can choose the Check-Guy because I enjoy his attitude and his
"fuch-you you primadona" stance.

People...you are lazy. You expect Big Brother to do your
choosing for you. To rid the Group of the "cheek guy" and
the IDIOT GUY. What's next: they guy who wants to know what
a scanner is?

You really miss the whole point of the Cheek Guy and the
blithering jibberish-spouting IDIOT Guy....they bring a

certain "rush" to us all who decide to or not to. Just think of all those times when your family is getting on your arse and you need help.

You turn to the Cheeks Guy and the Blithering Idiot Guy for mind-stem stimulation to bring your life into better focus. These two save you from a lot of infirmities.

They save you from being "bored" ..... they titillate and upon their images read you expectorate. Say, it gives you something to do. Be glad they exist.

bill conduit

Thanks for checking Mensa out. Much appreciated. I know Bill is
lying about his FCC license too because the FCC told me on the phone
that they have NO currently valid license on record for a
Bill or William Cheek in California. The license he CLAIMS to
have was discontinued 13 years ago & was NOT renewable after the
5 year expiration. It was grandfathered into another license with
a completely different title/name, & Bill does not claim to have
this newer license.

Blue dot 9 wrote:

No, over here in Europe we are also using QNH, at least in Western-Europe.
I'm not sure what they do in the old 'behind-the-iron-curtain' countries
today, but they used to use QFE (and the metric system in stead of feet and
knots), and as a consequence hereoff, the approach plates for the East-block
countries used to be printed on pink paper as opposed to yellow and light-blue
in order to constantly remind the pilot that here was a reason to be extra
alert about altitudes.

Hi Steve:
I have BC III LH power cords for $5 each. I also can provide owner's
manual including schematic for $11.
Hope this helps.
Best Wishes,
David A. Lovell, RF Eng., Owner, Electra Corp.

I have the following radios for sale this week:

3-Sabre 1 UHF 12ch $400ea
2- HT1000 UHF 16 ch $350ea
1-Plectron monitor VHF $75
2-MT500 VHF 8ch $100ea
2-STX800 type 1 w/full keypad $325ea
1-STX821 type II,IIi full keypad new battery $400
1-MT1000 VHF 16ch $350
1- Visar UHF 16ch $350
3- HT1000 shoulder mics $50ea
6-MT1000 shoulder mics $50ea

Please make an offer and please specify which radio you are referring to when you reply via email, I get confused some times.. I am currnetly looking for the Following Radios:

HT1000 VHF
MTX800 or810
MTX8000
Ht1000 Rack charger

Please email with any offers or trades, the prices above are ASKING prices.
Thanx,
JOE

Not really, when the trunked system goes down, it goes down hard. At
least these guys could still talk to their Unit HQ's and dispatch from there.
When Portlands goes down, it goes DOWN.

Jeff,

Look in the 46.610 to 46.970 MHz range for the base station. Depending on your sets age, it'll be capable of as many as 10 or 25 channels. Some portables only offered 1, 2 or 3 channels of those so it won't be hard to find. The range quoted is for the "original" 10 channel assignment.

Regards!

One of the more likely scenarios is that one or more solder joints on the Logic/CPU board are going defective. You could try resoldering some of them in the vicinity of the CX-501 clock resonator and see if that does it..... Otherwise, see the below excerpt from my FAQ for a broader view of what you might be dealing with.

============[From the FAQ - copyrighted 1996] ===============

034: My PRO-2004 has problems, first mild and now severe. It has been repaired several times. Can you fix it?

There is a distinct possibility this PRO-2004 has problems with defective solder joints. Back in 1986, there was a production run of the PRO-2004 manufactured with a defective wave soldering machine. At first, it was only marginally defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was discovered, was that many defective PRO-2004's had been shipped to market. Some immediately failed within the warranty period and were repaired or replaced. Others didn't fail until after the warranty expired, and were either repaired or junked. Some didn't fail for years.....

Failures appear to come in waves.....periodic rashes. Defective solder joints are a serious problem, because the radio can be

fixed only to the extent that it is broken. Repaired solder joints today have no bearing or relationship to those headed for failure in a week, a month, or a year. There is no economical way to repair them all in one fell swoop. A PRO-2004 with defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

I have the CE-232 interface, and am completely happy with it. It is not as simple to install as other products, but it offers the hacker some possibilities not available with others.

The Ce-232 allows one to write scripts for the interface that tell the scanner and computer to do custom functions. I wrote one for mine that will wait for a specific frequency to become active (such as the aircraft emergency freq of 121.500, or a tactical frequency used by a PD.) Once it detects activity, it reprograms the last bank with related frequencies, locks out all the other banks, and turns on the recorder. It will continue in that mode until no activity is heard on any of the frequencies for a user defined amount of time. Once that time limit is reached, it reprograms the scanner just the way it was before all of this happened. That way I can have the thing chug away as normal while I am gone, and still have a certain amount of control over what is recorded.

The CE-232 actually reprograms the memory in the scanner, unlike other interfaces that use the computer's memory for frequency retention. With the CE-232, you can program it, unhook it, and it will stay that way. It is quite useful if you travel with your scanner. I have various frequency lists for the areas to which I drive, and when I plan to head out to other states I simply program it for that area and then toss it in the car and away I go. Other interfaces won't let you do that. With those, you would have to program it manually if you planned on using it on the road...unless you have a lap top computer!

The CE-232 won't decode PL tones, and isn't quite as fancy as some others, but it is a very utilitarian interface.

Bill Cheek is the designer and retailer for the CE-232. Commtronics Engineering is his business name. He's on the internet.

>
> Thanks,
> Ollie Flint

Hello Ollie,
It is my opinion that the OS456 is the best interface if you don't mind leaving the scanner hooked up to the
computer. While this makes mobile operations a little more difficult it is the most usefull. OS456 is also the
best choice if you would like to scan by tone or scan by signal strength. The CE232 is a good choice if you
want to run your scanner away from the computer. Now don't let me confuse you, the CE232 does require a
computer to operate but it can load frequencies into the scanner for those times you wish to use it without
the computer. The OS456 cannot do this.

The CE232 requires proprietary software to operate and the software leaves alot to be desired but very
fuctional and reliable. It does have a few features that the others don't have. The ability to write your own
radio operation scripts and 4 addressable switches and more...(Bill insert your ad here)

I have tested a number of software packages that work with the OS456 and would like to say that the Scan*Star
for Windows Plus would be the best. Others may say that the Probe 2.0 software would be the best. I don't know
as the author has not released a demo version. Probe operates under DOS, but can run under a window. Scan*Star
requires windows.

There, you have read my biased point of view concerning your question.
I own 2 2006s I have an OS456 in one and a HB(CE)232 in the other.
Next week I will be removing the HB(CE)232 and installing another OS456. Then I will reconfigure both of the
scanners for use with the HB(CE)232.
I depend on the Scan*Star program as my work horse and let it create files that I load into the scanner with

the HB(CE)232 for those times I can't cruise around with a laptop on the console. I write my own scripts and
was a "charlie" tester with the origial version HB232 and a beta tester with the VADER hardware/software
recorder.

As for the WinRadio I only know what I have read and played with at EEB.
HF = Good deal, it has Sideband!
VHF/UHF = not ready for prime time
Put your $600 towards a AR8000 and then order Scan*Star Plus. If you
care WinRadio is not Cellular capable, AR8000 can be.

Good luck and let me know what your final purchases are.

Scott

You are a liar, in fact some of the schools I have attended have even
been discussed in FIDO echos. Most recently, Large Account
management, by Motorola, class held in Kansas City MO. A couple
before that, include Motorola Dealer Sales Manager Training Academy,
held in Schaumberg, and the Motorola CENTRALINK school, also held in
Schaumberg. If you want copies of the certificates, please send me a
snailmail address, and I will send them to you.

Will you be willing to do the same?

Now, these are but a few of the total, I will be more than happy to
send you more if you just have to have them.

In fact, we could just send diplomas, certificates, etc to a third
party, and let them verify. You and me. Pick a neutral third party.

Perhaps, Bobbie Beers? Although she is a assistant Moderator for
Bill, I have complete faith in her being neutral. I can even send her

pay stubs from prior 2-way employment.

ATTENTION ALL SCANNER CLUB MEMBERS:

I am presently typesetting a major new book on the radio monitoring hobby, (no, I'm not the author), and have enough "white space" left to include information on regional and local scanner clubs.

I would appreciate your IMMEDIATE feedback by e-mail with data on any and all scanner clubs and "notification networks as follows:

Name of Organization:
Contact Person Name:
Address:
City/State/Zip:
Voice Phone:
Fax Phone:
BBS Phone:
E-Mail:
WWW page:
Comments:

This information is needed ASAP, preferably before this coming Monday. Thanks in advance.

IMackey adds people who he can't badger to kill file. Why if Cheek so
upsets him doesn't he add him?

> >So why do you want to fightagain? You know you lose every time.

If IMackey acted on Fido like he does here he would lose access. His
Sysop agreed with Cheek when he got ScanRadio boot.

Post those Credentials and resume IMackey. Rec.Radio.Scanner waits.

Post those Credentials and resume IMackey. Rec.Radio.Scanner waits.

959. Discriminator output mod for FRG9600

Newsgroup: rec.radio.scanner
Date: 1996-10-11 00:00:00 UTC
From: D.Gray@AutoComm.cityscape.co.uk
Message-ID: <845070126.12712.6@cisas91.demon.co.uk>
Source record: 220555

I'm a G3, so here is a mod for the Yaesu FRG9600:-

To gain access to the NFM discriminator on this radio is easy BUT only do it if you feel capable of doing one very fine solder connection....

Basically what you have to do is connect a short length of audio coax via a smalll capacitor, to pin 14 of the mixer/nfm discriminator chip (MC3357P). This coax can be bought out to one of the spare phono or jack plugs on the back of the radio. There are several sockets on the back and I have used the "MPX" socket on my radio because I will never want to put a multiplexer on it! Here is how to:-

Components required:-
About 12 inches of thin audio cable
one 0.1 uF capacitor
one small cable tie (not essential but recommended)
one cup of coffee (to steady the nerves!) - essential

Disclaimer: The following is given in good faith. I cannot be held responsible for any omissions or errors, or to any damage caused to any radio howsoever caused....All care but no responsibiity!!!!

1) disconnect power and other cables at the back.

2) remove top and bottom covers.

3) from the top, locate the N.F.M. board (4.25 inches [115mm] from the back panel)

4) very carefully solder one leg of the 0.1 copacitor to the solder side of the pcb where pin 14 pokes out. Be careful to correctly identify this pin AND be careful with the soldering, it is a fine bit of soldering and is easy to short out this to the ajacent pads.

CHECK and double check that you have done a good "clean" solder job here - It's vital to be very careful - I cannot stress this enough!

Leave the capacitor hanging in the air for the moment...

5) Use a small needle file to drill a small hole in the top portion of the nfm pcb wher there are no tracks. through this hole, thread a small cable tie and leave in situ for the time being.

6) with a sharp knife, scrape a section of the solder resist from the top, right hand "Earth" track (as seen from the solder side of the pcb) and tin it with solder (To confirm that you have the correct track, it is the one connected to the can of the xtal on that board!)

7) prepare the coax by:-
(a) stripping back the outer insulation by about one inch. (25mm), twist the shielding together and tin it for about .25 inch [6mm] and then trim it down to this length.
(b) stripping back the inner by about 1/16 inch (2mm) and tin the inner conductor.

8) solder the screen of the coax to the earth track so that it will present the inner conductor very close to or touching the free leg of the capacitor.

9) now clamp this coax cable into position using the cable tie to secure it into position.

10) Solder the inner conductor to the free in of the capacitor

11) orientate the radio so that the front pannel is facing you and looking into the radio from the top, thread the free end of the coax to the bollom by way of gap between the main pcb and tha case at the back, right hand side (near the two white connector plugs)
tuck the coax under the big choke (the thing that looks like a transformer). BE CAREFUL not to put any strain on the coax. Leave a little slack ...

12) now turn the radio upside down and orientate it so that the dial is facing your right. The coax should be poking up at the left hand side nearest you!

To use the "MPX" jack socket as the access point:-

13) Identify the 3 mountin pins of the MPX jack. They are 2 5/8 inch [65mm] from the edge facing you, of the main pcb .

The pin on the left is the earth (ground) pin. The center if the "live" pin and the right pin is not used electronically (only as a mechanical mounting point and is ignored in this mod)

14) carefully cut the track leading to the centre "live" pin about half way along it's length (This removes the unused "MPX" signal to the jack socket.

15) prepare the audio coax appropriately and solder the screen to the earth pin and th inner core to the middle pin.

Replace the top and bottom covers, making sure that there is no strain on the coax and that it is not being "pinched" by the covers.

IMPORTANT - Add a "MOD NOTE to the inside of the radio and also in the instruction book:-

a) a small self adhesive lable stuck to the metal screen on the underside of the pcb with words to the effect :" 10/10/96 - track cut to remove mpx and coax added to give access to the NFM discriminator output"
b) similar lable on the back denoting the MPX now toi be "MFM

Discriminator"
c) if you have a circuit diagramme, note the change also thereon!!!

The discriminator output is at a fixed level (about .7 volt) and
totaly isolated from the volume control - the setting of the volume
control will not effect the discriminator level. The squelch control
WILL cut in and out on the discriminator line in the same fashion as
oon the normal audio.

Happy hunting...

Donald Gray

~~

L0pht Heavy Industries POCSAG Decoder

Pager data stream monitoring unit

http://www.l0pht.com/~kingpin/pocsag.html

L0pht Heavy Industries is proud to announce the release of our POCSAG monitoring unit. Used in conjunction with a radio scanner or receiver, it allows off-the-air decoding of all pager traffic (POCSAG paging signals) at 512, 1200, or 2400bps. Both numeric and alphanumeric messages will be decoded, as well as a hex dump of raw POCSAG codewords. 95% of pagers today are based on the POCSAG protocol.

The unit is small enough to fit inside a DB25 hood (included), and is ideal for portable use. The actual PC Board is only 1" x 1" and uses standard size components (no surface mount). All you need is a radio scanner or receiver. Common paging frequencies are around the following bands: 35Mhz, 43Mhz, 152Mhz, 454Mhz, 931Mhz. Specific frequencies can be found in any scanner guide and on the back of pagers and a small list of common pager frequencies is included with your order.

This system is useful for the testing of paging systems and transmitters. With the included software, one can select which pager capcodes (pager IDs) will be rejected or logged to disk, making it easier to track only the necessary signals. The device is powered off a PC-compatible serial port.

The unit is available in both kit ($59.95 + s/h) and fully-assembled ($89.95 + s/h) versions. A professionally produced PC Board, all components, mounting hardware, schematics, software and documentation are included. The major cost of our kit is the software. You may order our POCSAG kit (un-assembled) with an UN-REGISTERED version of the PD-201 software for $19.95 + s/h. The Un-registered version of the software is functional with a 5-minute time limit and saving logs to disk is disabled. Registration at a later date can be done through the author. The software included with our unit is a REGISTERED version PD-201 written by Peter Baston.

Fully-assembled units are tested before shipment. General soldering and electronics knowledge is required to construct the unit from kit form, so please be aware when ordering. Other pager decoding units have been seen for sale on the Internet

with prices ranging from $150 to $2000. L0pht Heavy Industries' main focus is to help supply hobbyists with ready-to-assemble kits, and supply interesting hardware to people who might not have the time or resources to produce their own PC Boards and circuits.

POCSAG Project Division
c/o L0pht Heavy Industries
P.O. Box 990857
Boston, MA USA 02199-0857

Please include $59.95 for kit-form, $89.95 for fully-assembled unit, or $19.95 for a kit with UN-REGISTERED software plus $5.05 for shipping and handling in United States currency for each unit ordered. We will ship all orders via First Class United States mail to anywhere in the World. Cash, Check or Money Order accepted, sorry no Credit Card orders. Please make all checks payable to L0pht Heavy Industries. Massachusetts residents please add 5% sales tax. Please allow four to six weeks for delivery. We will NOT do COD orders, as we have had trouble in the past with people refusing to pay once we processed the order.

L0pht Heavy Industries is not responsible for any results, good or bad, produced by the user during use or construction of the product, so consider the assembled-unit if you are not confident in your assembly skills. L0pht Heavy Industries assumes no liability for lost or misdirected mail. L0pht Heavy Industries reserves the right to refuse sale of this unit to any person, organization or entity. All sales are final.

Any questions can be directed to pocsag@l0pht.com

962. BC9000XLT vs PRO2006 Recommendations Wanted

Newsgroup: rec.radio.scanner
Date: 1996-10-11 00:00:00 UTC
From: Dan Niro <Niro_Dan@isus.emc.com>
Message-ID: <325E76CB.2F36@isus.emc.com>
Source record: 220558
Cross-posted to: alt.radio.scanner,rec.radio.scanner

OK Guys,
Im interested in buying a new scanner and I need some recommendations. From what I'm reading, the current hot models are the BC9000XLT and the PRO2006. Anybody know anything good / bad about one vs the other? I'm interested in performance and features. And if I'm gonna make the investment, I gotta have cell-band coverage (or the ability to restore it). I haven't yet heard of a fix to restore cellular on the new 9000XLT (does a fix exist?). I heard the euro-9000 received cell, but a segment of the VHF-Lo band was blocked to comply with euro regulations, this would be unacceptable if it's true. Does either perform better? Which should I get? Accurate and reliable feedback is appreciated...

thanx.

Hello to all.....

I have recently acquired a Bearcat scanner model BC III LH manufactured in 1978 by the Electra Co. I am in need of a power supply cord that plugs in the back of the scanner. I am also interested in the schematics for this particular unit. If you have any of these items available, or know of another place that I could find them please leave an E-mail message to my address listed below.

Thanks for reading this message....

>Thanks in advance for any suggestions.

Not too hard a thing to make for about $20. Most of the work can be done by one IC. The chip you need is a MC145436AP and a xtal that can be found at just about any electronics parts store, a 3.579545 MHZ. You will also need the Motorla Data Book, this book give the schematic for the rest of the hookup. A 1 M Ohm resistor and a 0.1uF cap are the rest of the parts.

The only problem is that you will need some way to view the output of the chip which is in BCD. This can be sent to the parallel port of your computer and read into you machine using BASIC if you like. If you are handy with electronics you should have no problem. If anyone likes I will sent an ASCII diagram of the basic hookup. I will be using a basic Stamp to display the BCD data on a LCD display. When I have finished this I will post the plans and program if anyone wants. (It will take about 2 weeks due to the shipping delay I have waiting for the STAMP uC)

I have build the decoder part and it works just fine on my scanner.

It will certainly encourage a new generation of pirates! I think that
we will be seeing lots of new activity on the hf bands and also lots
of interference on bands above 50 mhz.

The FCC has been a real disappointment to all I believe. Since the non-enforcement of CB started, its been downhill for them. They are quick to get into your pocket, but real weak in enforcing the rules.

Hey Bill-

Well how ya doing?

This has gone on now for nearly 3 months, since July 20th. I believe it started with Hugh Duff, PJB, & a few others.

I have not come down on you regarding your technical knowledge of scanners, I think you are good in that area. My problem is primarily with your grand-standing, lying/story-making, & your arrogance.

I want you to know that my issue with you WAS NOT because you kicked me off of your scanradio echo. It was because of the arrogant WAY you kicked me off. You made half truths & gave warnings & then second warnings BEFORE I received the first warnings. You then complained to my sysop, made YOUR complaints public on your echo, & stated that any response could be done via private netmail. I responded to you via private netmail & you REFUSED to consider or respond to my e-mails. Then you complained to my sysop & he asked me to not send you e-mail due to your request.

Another area is your credentials you claim (licenses, degrees, & certificates. Personally, I couldn't care less about them, but the way you flaunt them invites controversy. We now know you are not current with your Mensa membership. We also know your FCC commercial license was either never for real, or it was revoked when the FCC busted you for illegal equipment/activities, or you chose not to renew it when the license became lifetime 13 yrs ago.

Personally, I don't believe that affects your knowledge. But it does speak for your credability.

You claim to have dual masters degrees but will not present anything to confirm them. That speaks for itself.

You stories about my kids being bed wetters (I have no kids) & me not having eye lids also speaks for itself & your credability.

I think you have learned that at some point your activities will come back to you. Sorta like the saying "what goes around comes around". I have had several former & current Scanradio members who have asked me to forward the messages from here to them because they were supportive & interested.

On THREE seperate occasions since July you have been offered a truce & you only continued your attacks.

I would like to offer you a truce again. You may respond if you like, but you don't have to. Your actions online will clearly indicate wether you chose the truce or not.

BTW- myself & the others have a long memory, so this is for good not just a couple weeks. If you go back on it then the truce is off.

Have a nice day Bill.

It depends on the date of the scanner's manufacture. I'm sorry, I can't tell you what the cut off date is, but that "mod" cannot be done with models that have been sold in the past year or so.

Mark,
I think your best bet would be a BC-3000XLT. I just purchased one mail order for $334 + shipping. Uniden did one heck of a nice job with this beauty(except for the stinkin'Nicad - when are they just gonna listen and give us AA battery-able scanners?). If the Nicad thought turns you off(as it did me for a while), try the Radio Shack Pro-26...you should be able to get one for about $350 mail order.

Good luck!

Strong signals to all,
Rich

Hi Jeff,

> How about a straight answer. Is the Opto the only way to get continuous
> coverage on the Pro-2035?
>
> Is there no other part replacement that can be done to get the
> continuous coverage?

The only way to restore continuous coverage from 760-1300MHz to allow "normal" keyboard entry of all frequencies without using the Opto board is replace the main IC with the ones used on the PRO-2035 that were sold by RS outside the USA & Canada as the IC controls the frequencies you can enter.

The only difference between the GRE-9312 (as used in the US model) and the GRE-9410 is the full 760-1300MHz coverage. There is no other difference feature wise. AM, NFM & WFM together with increment steps of 5, 12.5 and 50Khz remain the same.

There are two ways to replace the IC....remove the IC fitted to your logic board and refit the GRE-9410. The IC is a 100 pin surface mount device so its not something for the unexperienced. This is the least expensive way.

The only other alternative is replace the complete logic board that has the GRE-9410 IC already fitted together with all other components. This is just a "swap out" and is about as simple as boiling an egg - its also more expensive :-(

The same applies to the PRO-2042 and most other current RS/Uniden receivers (PRO-26, PRO-60 etc).

Hope this helps and clears it up a little for you.

Yes, it's not blocked but you won't search in 30 KHz steps, however. You'll
need to use the "Turbo" function
and scan at 300 cps in 5 KHz steps.

985. FS or Trade: BC-890XLT full coverage scanner

Newsgroup: rec.radio.scanner
Date: 1996-10-11 00:00:00 UTC
From: Radioman@localnet.com
Message-ID: <53lhdd$d28@prometheus.localnet.com>
Source record: 220686
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

I have a full coverage (unblocked) BC-890XLT scanner in mint condition
that I purchased new October 22, 1993. I've used it very little. It works
fine. I have the original box, manual and sales slip for it. I would
like to sell or trade (preferably trade) this unit for something else.
I find that I get more use from hand held scanners generally so if an
interesting hand held (with full coverage & unblocked) were offered,
perhaps we could strike a deal.On the side of selling my unit, I
honestly have no idea what a fair market price would be, so make an
offer if you like. Here is the frequency coverage of my unit:
29 - 54mhz
108 - 136.975mhz
137 - 174mhz
216 - 224.9875mhz
225 - 399.9875mhz
400 - 512mhz
806 - 956mhz (Cell freqs have correct 30mhz spacing)
Also, the unit allows for the addition of a CTCSS tone board as an option.
I never opted to do that, however.
Please e-mail with what you would like to offer for trade, if interested.
Regards, Ray Miller N2NJK

986. Baseband Audio Interface?

Newsgroup: rec.radio.scanner

I've read that the audio signal present at the baseband audio output is superior to the audio presented at the 'tape out' jack for purposes of tone detection. If true, does anyone have a tried-and-true means of interfacing this signal from the discriminator (right?) to something like a DTMF decoder chip? Thanks and regards,

Steve

For sale MR-8100. $200.00, I will pay shipping.

NOTE: I have replace the oddball plugs that came with the radio.
The audio out now has a 1/8" jack. (Plug in speaker or
headphones).
The power input now has a 5.5 mm O.D. 2.1 mm I.D. inline
jack. (Same type jack as on some portable scanners)
(Rat Shack #274-1577)

I only tried to program the scanner from my computer
ONCE. They did NOT communicate with each other. I
now understand that Scanner World supplied the wrong
cable. This may have been the trouble OR the scanner
may just NOW work with a computer.

I do NOT have the scanner/computer interface cord nor
the speaker that came with the scanner.

If anyone is still interested email me or I can be reached
nights at 717-879-5315, days 607-773-0104.

John,

I've had good luck with the inexpensive Scantenna and the Channel
Master Monitenna for the ranges you listed above.I think Grove sells
the Scantenna. You'll probably need an attenuator if you plan on using
it with a 200 Xlt. I've never had good luck hooking a 200 XLt to an
external antenna. Maybe your situation is better.

If memory serves, Quarnstrom was not ejected from the SCANRADIO forum
on Fidonet. He popped in to do some "technical potshooting" at me,
and didn't like it when I disagreed with him. He got snotty and was
warned about it.

Then he disappeared. End of story until recently when he found his
way onto the newsgroup here.

Summing it all up.....Quarnstrom is NOT a participant; he's just an
instigator and troublemaker.

Last week (10/1 - 10/4) I put a plea for help for info on Cubic Electronics in Ocean Side, Ca. Some very nice gentleman gave me the info I needed. I have since had a complete system crash and lost ALL my messages...in fact I lost 2 hard drives with everything on them. The only thing I remember about the message was that his address started with something like "HONT"..his name was Loenk (?), The important thing was, he gave me the name of a guy that had worked for Cubic. He said the guy still repaired Cubic radios for a fair price. H ealso said the guy had a fax on during the day but in the evening it was off line. He gave me the telephone number and all the info I needed. I can't remember which newsgroup it was in. If he will PLEASE contact me again I would appreciate it very much. I need the same info again.

I am posting this to all the ham and radio newsgroups to find this good samaritan again. I sent him a thank you message, but of course that is also gone now so I can't get the address from there.

Mr. Mackey , You're full of it.
I've spent 20+ years in computers, and there is absolutely nothing wrong
with Bills analysis here.
Maybe his "computer isn't not good enough" is a little opinionated, but
the sources of interference are all correct. In fact I'm sitting next to
my old 8088 system, that has all of these problems, plus a noisy printer
port.

I think you're the problem.

Hey all, thought you might be interested: Wal-Mart has a nice AC-DC universal adapter that has 3,4.5,6,7.5,9,and 12 volt settings at 800ma max. It has every plug known to man on it except the 9v emulator end and a polarity switch. It only costs about $15! I bought it for my BC 200XLT and it works great! I am able to listen to the scanner while charging the battery packs. I think it is packaged under the Popular Mechanics name, but the actual model number is a Gemini AS498. Just thought I'd let you know.

Gene,

You should get excellent results monitoring Philadelphia. A good page
for Phila Police and Fire is http://www.voicenet.com/~macm/chart.html
This is the Philadelphia Scanner Chart which has frequencies,
divisions, districts, and Fire Battalions all in one convenient page.

Also, Check out my page for South Jersey (which is just across the
Delaware river from Philly)

http://www.voicenet.com/~jcardani/sjscan.htm

There is lots of action in the Philadelphia/South Jersey area.

ENJOY,

Joe Cardani

>anyone ever use MoTron Electronic's TDD8X?
>Thanks in advance for any suggestions.

I have been using a TDD-8X at home AND at work for about 6 months. I can highly recommend it for those that have relatively simple needs in DTMF decoding. This sucker just flat works as advertised.... no problems at all as long as you realize that at the price of $59.00, it doesn't include a cabinet or power supply.

All connections to the PC board are through standard connectors, and it even comes with PC software for computer logging of DTMF tones.

You can hook it to scanners via ext speaker jack or record output jack (preferred). It works over a wide range of audio conditions.

For the money, you can't go wrong. This is a solid design built with quality parts. Highly recommended!

Howdy,

I'm a photojournalist working in the Los Angeles area and our local law enforcement agencies
are all using moble data terminals in their vehicles to send typed messages to one another. I've heard it mentioned that you can scan those frequencies with a scanner and patch the signal to your pc and have it decoded and displayed. Someone even told me you could do this with pager signals and watch the numbers scroll by on the screen. Does anyone have information on doing this and what software or hardware is used for the pc? Is anyone doing this in the Los Angeles area?

howdy again,

I've been told this is illegal, but I've also heard from journalist in other areas that their local police
departments have programed radios for news media organizations so they can monitor at least some
(they like to keep their tac channels private) of their "scrambled" frequencies. I'd sure like to hear
more about this from anyone who knows for sure. Keep in mind I'm not really into the tech side of
scanning, just do so as part of my job.

Thanks,
Rich

John,
you are right. some of US do have long memories. However, it seems that yours is somwhat selective. How is it that out of roughly 1000 posts, that yu would have 200 of them dealing with this (and others) subject? in the same period of time, I noticed about 50 odd postings from Mr. cheek on this subject (or related items) and an additional twenty on subjects relating to scanner, their repair, or modification. Why is that, John?

WHat I see is a vastly different picture from the point of veiw of having all such artivles available here. I have counted them, sorted them and still, my numbers show that you are the one causing most of the trouble. why don't you just give it up? I am sure there are others who can back up my figures....

Based on my dealings, as a commercial broadcaster, with the FCC, I suspect the agency's budget has been gobbled up by bureaucratic nonsense. Paperwork became the top priority. We were FAR more likely to get handed major fines for an incorrect entry on an EEO form than for some transgression that really mattered.

It isn't that the rules aren't being enforced, it's that priority is being given to enforcing STUPID regulations. That gives the appearance that the FCC isn't doing their job. But, then, I guess they aren't.

I wonder if the people of Virginia Beach really gave a damn that I had a Native American as a Sales Manager. Or would they have been more concerned if my transmitter drifted off frequency and raised havoc with air traffic control at the naval air station a few miles away?

I've had good luck with two aftermarket whips. First, and best (but a PAIN to walk around with <G>) is the Grove ANT-8, it's a set-top BNC telescoping antenna. It seems to work
GREAT on lower bands, but it's about 5 feet long.

The other set-top I've had good luck with is the Rat Shack model with the center load in it.
BOTH will blow away the rubber duckie that came with my Bearcat.

Barry

1042. FS: Antenna for cordless phones

Newsgroup: rec.radio.scanner
Date: 1996-10-12 00:00:00 UTC
From: Mindaugas Juknys <juknys@aiva.lt>
Message-ID: <325F4260.620D@aiva.lt>
Source record: 220560

The AMT-143 externally mounted antenna is designed to extend the effective diffusion range of household cordless phones (800/900 Mhz).
Proper placement and mounting of the AMT-143 insures a profound connection between the base station (transmitter) and receiver.
Signals sent by the AMT-143 radiate as far as the eyes can see. Neverthless, the operating frequency range of household cordless phones (800/900 MHz) is known to be influenced by large ojects and reliefs, typical causing an effect known as multiple reflection. To avoid this, mount your AMT-143 as high above your buildings roottop and as far away from other antennas as possible (flowever, mounting the AMT-143 directly above other antennas is acceptable). Following this advice, your signal will have a substantially larger effective range as well as an evenly distributed effective field. These qualities are indispensable in urban locations.

Technical data :

Direction pattern.....omnidirectional
Frequency range.....790-980 MHz
Height.....1.3 m
VSWR.....< 1.3:1
Impedance.....50 Om
Gain.....6 dB
Max.power.....50 W
Cable length.....10 m/RG 213
Antenne connector.....N
Telephone connector.....TNC
Packing.....PE

Price.....$140

DTMF decoders are also available here
http://www.rain.org/~dschmidt
Battery operated, full assembled less case, all 16 tones decoded.
16x2 line LCD display
511 number non-volatile memory
scroll buttons
2400 baud RS232 port for your PC. With cable
runs off any DC voltage from 5.1V to 40V (10mA draw), 9volt clip
attached.

>
>Thanx...

If your Pro-51 is truly 8 months old (manufacturing date) then the mod
(code) will probably not work. If you enter the code and the frequency
range is in place you can do the following to capture the upper and
lower limits of this range:
Caution: entering the key code wipes out all stored memory
locations!!!

1. Enter the key code (2,9,L/O).
2. Manually scan to the lower limits of the frequency range (keep the
squelch down so you step through the range as approach the limits).
3. At the lower end of the range, store the frequency into one of the
ten monitor locations by pressing the monitor key.
4. Repeat the above for the upper end of the frequency range, also
storing it into a monitor cell MON.
5. Finally, program the two monitor cell locations into one (each) of
the two hundred storage locations by:
Press Program
Enter storage location
Scan through the 10 MON locations for the lower limit stored
Press enter to store it.
Repeat the above for the upper limit.

To access the cell range, simply program a lower and upper limit and,
using the arrow keys scan between the two.

When you find a frequency that you also want to save (such as a
police frequency - we have a few in our area) store them into one of
the ten MON locations and then program them into a storage location.

This worked for me, although I would prefer a more permanent fix but
that's why I ordered the AR2700.

Don't think for a second that the FCC is going to let pirates fill the airwaves. The statute of limitations is 7 long years. They may well be luring pirates into going on the air with their apparent lack of enforcement, all the while recording instances of violations, only to have a massive sweep every few years. I don't think they'd give up a cash cow like fines at 10 grand a pop.

My guess is this is a Uniden MR8100. A friend of myne has one. He has seen better scanners. The 760 is a good mobile, does PL. If you have room, the BC9000 is the best buy. But I believe you are refering to the MR8100. Not worth it, IMHO.

In the past, the FCC *micromanaged* the spectrum and its users.
This often had a stifling effect. The classic example is the
broadcast and cable service where the regulations fill a book 4
inches thick. A few years ago, a different doctrine, that of
deregulation, swept government. The main thrust of this idea
is that the marketplace is a better method of managing resources
than government regulation. Thus many of those regulations were
waived or eased.

Now the marketplace, and the competition it spurs, is a rough and tumble place. It has a Darwinian quality of survivial of the fittest. While this allows the cream to rise to the top, and fosters a better product, it also allows sacred cows to be gored. Entrenched interests have screamed for renewed protection as new competitors, new methods, and new services have arisen to compete in the marketplace. Some of the entrenched interests are threatened by new ways. Now some of the new ideas, products, and services fail as well, but some of them have become very successful. This is the nature of a free market. The weak idea fails and the strong ones survive. This is how progress is made.

Holding a government license was once almost a grant to print money for some. By giving a monopoly to one entity for a certain slice of spectrum, the government ensured that competition couldn't keep the grantee from gouging. And license grants also limited the opportunity for new services to use spectrum in new ways. This was stultifying. That's changing now. Change is always disconcerting to entrenched interests.

In many ways, the government hasn't gone far enough in deregulation. Half measures are often more chaotic than fully revolutionary change, or than no change at all. We're in a situation now where the marketplace is not fully free to work, yet the old government strait jacket no longer works either. The current situation is neither fish nor fowl. That's not good.

As regulations have been eased, enforcement has been reduced. This is not wise. As regulation is stripped to its essential core, it becomes more important than ever to enforce those core regulations. Many of the nitpicky regulations which were once enforced with such zeal are now gone, but among the regulations which remain are the important ones required to prevent complete chaos. No market can function freely if bandits are free to roam its stalls and savage merchants and shoppers. Freedom of market entry is good, freedom of competitive action in the marketplace is good, but those who abuse that right of entry and competition have to be apprehended and stopped from further depredations.

Enforcement is a hard job in a free market. On the one hand, competition must not be stifled by heavy handed application of nitpicky regulations. There must be winners and losers in the marketplace. This is essential to competition. Entry into the marketplace cannot be denied just because some existing merchant might be harmed. But wanton acts of vandalism and theft must be stopped. The line between fair competition and banditry must be maintained.

It is hard for enforcers to stand idle. The natural tendency of enforcers is to *act*. If they can't find cause to act, new regulations are created to give them cause to act. This is the primary danger of government. Government is often not wise enough to stand by and let things proceed. OTOH, there

are times when government enforcers *must* act. Determining
which is which requires a degree of wisdom and judgement too
often lacking in government. It is usually better to err on
the side of too little enforcement than to err on the side of
too much. It is better to suffer a little vandalism and banditry
than it is to suffer under the yoke of oppressive government
regulation. Freedom is more precious than safety.

I was wondering how to use the Bearcat 101. It is an analog scanner, so I don't know how to program it. It has a row of switches and LED's to indicate which channel (I guess) the switch is for. Whenever it is scanning, it will stop at frequencies that sound like birdies and when there is no antenna, it has better reception. Any help is appreciated.

Save your money. The 22-305 gives a reliable count only when directly
connected to a signal source. Otherwise, it functions as a random number
generator. It seems to have poor shielding from its own internal signals.
Even when the input is shorted, the random counts continue. In short:
it's a piece of junk!

October 9, 1996
Springfield, Oregon city police began transmitting in digital mode. Although newspaper reports indicate the transmissions are not encrypted, scanner users are in the dark until a digital mode receiver hits the market.

Springfield not only has shut out citizens, but neighborhood watch groups, fire depts, volunteer fireman, REACT members, not to mention the Oregon State Police, Lane County Sheriffs office and the City of Eugene police, all who work closely with SPD.

Suprisingly, today, 10/11/96, they have been in analog mode. Some testing has been done in digital mode on secondary channels however.

For an update on Springfield (the only known digital PD in Oregon), go to the URL http://www.clipper.net/~scanrite/springfield.html

If we were on a playground somewhere, I'd beat you up, but we're not, so I can't do anything to you. You don't have an address. All you do is bitch and moan. You give ham radio a bad name. I'd expect more from a 31 year old. Do you ever contribute to the scanner newsgroup, or are you just here to get it on with Cheek? What's your problem?

Absolutely. The most comprehensive listing is probably the Haruteq book published by Bart Veerman in Stoney Creek. It's avilable at Radio Shack, Atlantic Ham Radio and some larger bookstores in the area. Retail cost is about $25.

Regards!

>
> Oh no it won't! That would be illegal for them to peddle it that way.

True cellular capability is not available to the 2042 and the 2035
without an OS535. Therefore "oh yes it does"! It is legal for them to
"peddle" it that way for authorized or government users, but they don't.

> If there are "unlock" codes for the software, fine....but the user
> won't know how to get them.

All they have to do is ask. The information is routinely available in
this news group and some software providers deliver it without question.

> And besides, hundreds of bucks for a cellular mod? You've got to be
>kidding?

Hundreds of bucks = $199 as of about 3 weeks ago. 1(800)327-5912. See
the Ad in the Sept. 96 Monitoring Times edition, the inside cover.
The OS535 and the OS456 adds a whole lot more to the scanner than any
other scanner interface commercially available at this time.
>
> Also.....Mr. Slaten asked for "the mods" for the 2042. That strongly
> implies he wasn't looking for a commercial thingamabob.
>

If you open the case and add, change, move, remove, or otherwise modify
the scanner the act itself then becomes a modification and the scanner
has been modified. The installing of the OS535 (commercial thingamabob)
will accomplish the above.

(Case closed)

>use the 2035, without a computer, when I have a 535 installed? I mean I spend 300 dollars for 1000 memories, I would like to use them:)
>From talking to Opto Electronics people, I am starting to think I could buy the 535, attach a PLL and I could have a radio!
>
>Rob Kling
>N8YBV

I would like to thank all those who replied for the valuable information provided here. This is an excellent way to get product info!

As with any exploration the first answered question lead to more questions. What is the difference in scan rates between the OptoScan 535(535)
and the CE232? I am a systems engineer ie) computer programmer and I have all the tools to do any type of code deveolopment I want. How
hard would it be to writre my own software for the 535 compared to the CE232? Also I would like to know what functions that are available for the
PRO 2006 are NOT available for my PRO 2035 when using the 535. For instance I was reading that you can, with the use of an Opto Electronics
board, tone scan, or signal strenth scan. My PRO 2035 does not have a signal strength meter, can I do this with a 535 installed ? As I understand it the
535 can be programmed in such away as to give continuous coverage, what are the codes for this? I heard that Monitoring Times published these codes
in a recent article, I would lilke to know the month and year of that issue. Also, if the code has been published is Optoelectronics planning to change it?

I am getting ready to purchase one of these products and I like the features of both the CE232 and 535, but I can not afford both of them, so I have to
be chosey about which one I purchase, hence the question and answer sessions.

FYI Mike a PLL is a Phase Locked Loop. It enables a computer chip to control the analog device known as a VCO Voltage Contolled Ocillator.
This digital to analog interface is what enables modern scanners to be controlled by computers. It is probalbly the single most valuable interface in the
communication industry today.

Rob Kling wrote:
> I am a systems engineer ie) computer programmer and I have all the tools to do any type of code deveolopment I want. How
> hard would it be to writre my own software for the 535 compared to the CE232?

Can't speak for the CE232; Cheek's BBS, website and book Cheek3 all contain details on developing for the
CE232. But realize that all it will do is download freq's to the radio; it cannot control the radio in a
two-way mode.

I just installed an OS535 in my 2035, and dl'd the demo programs from the net; I was not happy with any of them
(they all seemed flaky and require Windows) so I set out to write some control software on my own. Probe
software runs in DOS and gets good reviews from all around the net, but I don't want to spend another $100
right now (plus it takes away my motivation to write my own :)

First, get and read a copy of the OS456/535 programming spec (a copy came on disk with the 535 and it's also
available on the Probe Website). It explains the commands in sufficient detail. Then decide what you want the
program to do (primarily I want it to search out and store new frequencies unattended).

I'm hacking my first program in QuickBasic, and if successful will translate it to a better environment (eg. C)
when I have something that works. It took about 2 hours to figure out how to encode the commands to get the
radio programmable in remote mode.

To generate a full featured program ala Probe would take considerable programming; to get the radio to do
simple things doesn't look too difficult.

73,

Brett

Well, they do, but it doesn't work for s**t. Everytime Portlands goes
down, it's out cold.

For more read my homepage for one of the more "media visible" failures.

According to "Police Call" way back when Emergency
was still on the air, KMG-365 was licensed to an LA County
fire transmitter in Bellflower.

In this area, the transcrypt products are being used mainly by state of
Iowa
and they use a combination of inversion and wobbling
inversion frequency with digital syncronization and code selection.
There are three cycles of wobbulation per sync tic.
There is a preamble at the beginning of transmission.
Inverting it back still only brings intelligability up to 10% or so.
Straight fixed carrier inversion is easy to demod with the
mc1496 balanced modulator or with a sig gen and ssb reciever,
but ties up lots of equipment.
I have had a lot of trouble determining the wobbling deviation level
to use but if I set an fm mod ontop of am mod I can catch wobbler
transmissions that 'randomly' sync with my wobbling oscillator.
Even so it's very difficult to figure the right deviation.

Does anyone have a supplier of these fancy 3.5mm 4 pole plugs? I know I can buy the cloning cable for about C$15.00 and cut it in half, but I'd rather buy just the plug.

Linn county has a new GE system with digital capability but to date
they've only occasionally used it on car to car and car to car repeat.
I think maybe only a few of them use it.
Maybe they know it would upset some one???

Decorah is 100% DVP.

The dvp can be identifyed by a 6 khz tone at the end of noise
transmission and shows an eye pattern on the data.

The GE ssytem has a buzz preamble and 2 second repeating sync that
may be heard as a buzz similar to preamble mixed with data.
Not all of it is encrypted but is 9600 bits/sec (4800 hz EOT)

In your ssytem what are you getting at beginning and end of
transmission?

There are now at least 3 kinds of motorola DVP and
at least one GE but the DVP is 12000 bits/sec and GE is 9600 bits/sec.

I have recently purchased the PRO 2035 ($300, new, +1 yr warranty), which I think was a fair deal.
Then, I see in the forum that there is a lot of excitement regarding the much older 2006. Are the radios that much different,
I thought they were both manufactured by GRE . I know the 2035 has a faster scan rate, more channels and is NOT
cell modifiable, other than that what is the difference?

The freq counter is used as a stand alone device for picking up freq info
where you see or suspect taht communications are happening. In many situations
you can't ask to people taht are using the radios for their freqs, so you
need a way to get those freqs. You can also be close to a sight such as a
TV station, rally, march and find out the freqs the quickest way.
. rather than
using the scanner's search mode.

Sounds like the same archives, but I found them at a slightly different
location:

ftp to spectrum.ic.gc.ca/pub/tafl/

And get either tafl*.zip or tafl*.gz.tar, depending on your system.

Message-ID: <326178DD.1D39@worldnet.att.net>
Source record: 220439

Sunday's activity wasn't quite as good for me as the previous Dole visit but while I couldn't attend the activities, I did monitor at home.

This time I heard plenty of NJ State PD comm on Troop B trunk channels. They traveled from Newark down the Pkway and used the trunk.

Meanwhile Troopers in Somerville used Troop C trunking as they awaited Dole's arrival. The info put out was that the Troops on C were going to be patched into B once everyone had arrived in Somerville.

Did anyone hear anything beyond the arrival? I did hear USSS out of Newark, NJ on 165.5125 as they headed out to Hamilton, NJ. The group with Dole used Mike, 165.2125 as they traveled.

I'm curious about the campaign team and its use of business radios. Did anyone else hear them? If anyone elsewhere in the US has heard anything other than the standard USSS channels, like the itinerants, would you post the info or e-mail me, thanks.

Regards,
LGS

Yeah, don't buy it. I myself have both units and the BC200XLT is a lot better in terms of the receiver. The 2700 has a lot of features but they stopped at the receiver. My 200XLT outperforms the 2700 in UHF. ONe bright spot, 800MHz, it's pretty damn good compared to the 200XLT. It also has MilAir. If your expecting a budget AOR 8K, this ain't it. If you pay $200-250 for it it's not a bad deal I guess. Figuring th 200 was $225 new I'd say the 2700 should be in the same price range. Shoot, I'll sell you mine for $190.

Message-ID: <3261603f.2228032@news.dircon.co.uk>
Source record: 220446

Hi all
in regards to recent messages here are the software sources
for POCSAG decoding software.

http://www.bearnet.demon.co.uk/pocsag/

This is where to find PD v2.03 from the author
The sofware requires a small hardware decoder which costs
about UKP 5.00 and costs UKP 20.00 to register.
The new shareware version times out after 15mins
(only 5 mins in older versions) and logging is disabled
To get the system to work at its best feed it with your scanner
discriminator output (nice square waves) most of the problems
people have with this software are some scanners produce
nice 'rounded' sine waves which do not decode correctly

http://huizen.dds.nl/~mkalmijn/pocsag2e.htm

This is where to find the windows based software 'Semasoft'
this uses your soundcard only no hardware interface
just feed the audio to your soundcard line-in
This software is a beta only and the instructions are not in english!
hope further developments improve it PD v2.03 is far better and more
functional.

Hope you all have fun - Tony Blair Watch Out !!!!!

David,

> Would like to get full 800 mhz coverage for radio shack scanner.

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elsewhere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out.

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip) and this is not an easy job unless you have the correct tools for the job. It is possible to get the complte logic board with the IC and all components already fitted but this is a more expensive option.

The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through the 800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

are the codes for this? I heard that Monitoring Times published these
codes
> in a recent article, I would lilke to know the month and year of that
issue. Also, if the code has been published is Optoelectronics planning to
change it?

The first thing you should know is that that the main function of the OS535
is to control the scanner; whereas the main function of the CE232 is to
automatically program the scanner. Big difference. The scan rate with the
OS535 is determined to a large extent by the PC and software you have
running it. I ran my 2042/535 on an 286 with probe software and the best I
could get it to do was 40 cps. I switched to a Pentium 100 and Probe and
now run it between 65-85 cps, which is faster than the usual up-to-50 cps
that a 2042 does without the interface.

Comparing the 2006/456 and 2035/2042/535 hardly makes much sense. Assuming both have interfaces and running the same software, the differences are not significant. Yes, there are differences, but not worth quibbling about, in my opinion. Obviously, there are considerable differences if you are comparing the 2006 and the 2035/42 side by side, but since that is not the question, I'm not going to answer it.

Software to run the OS535 costs around $100. It doesn't seem like it would be worth the time and effort to roll your own. On the other hand, I've heard some people say the software with the CE232 is outdated (I don't know if it is or not). If that's true, you might want to cobble something better.

Some software, like Probe (there are others) feature signal strength meter but they seem a bit gimmicky. I don't use it with my setup because it doesn't seem to reflect anything the real world that I can figure out. I can't comment on the others. I wrote a computer-aided scanning FAQ a while ago that includes the features of the popular software programs. I haven't updated it in a while but you can find it at www.ultranet.com/~bellvill/scanner.html (hope that URL is still the right one--haven't checked in a while).

The unlock code is 27568114936463053849. I can't tell you what Optoelectronics plans are in general, let alone specifically whether they paln to change the code. In any case, if you're serious about buying any time soon, the point is moot.
>
>

I got an Email respose to a post I made in "alt.fan'mr-kfi" and a poster who's going by ⁄sundown66⁄ threatened to turn me in to the FCC for posting something relating to scanner radios and another, completely unrelated post relating to cordless phones. He actually accused me of listening in to coreless phone conversations with my scanner! Well, I was shocked at such a scandalous accusation. Anyways, I thought some of you might be interested in knowing about this individual. If you'd like to see the original Email, let me know via Email

>The point was that YOUR complaint was bogus. What he said was correct!

A good computer power supply makes all the difference. Make sure is
has the "TUV", "SA" and Underwriter's Labs emblem. I had a power
supply that wiped out all TV and radio reception when the PC was on.
It all cleared up after I changed power supplies. Now I can use my PC
five feet away from the TV and watch the TV at the same time.

Peter Laws was talking about the FT 50R,

PL><shrug> Haven't noticed this as a problem. It does allow you to
PL>change when the scanning resumes, though, which I've never seen on a
PL>scanner. Choices are carrier drop or 5 seconds. Did I mention that
PL>it transmits?

PL>>BC3000XLT or similar handheld with many of the bells and whistles to
PL>>make scanning a real pleasure.

PL>It's an HT, not a scanner. But it's not as big a compromise as other
PL>HT-scanners. I find that I leave my BC3000XLT at home a lot more
PL>now.

PL>You didn't mention that the audio level and quality is superior to
PL>the BC3000XLT, nor did mention the fact that DCS (digital PL) is
PL>built in and that CTCSS decode (encode is standard) is available with
PL>the optional keypad (which also has a digital voice recorder).

But, Peter, does it transmit???? :)

I take it that overall you like the radio as both a ham radio and a
public safety monitor/scanner? I have been considering buying one and
have been following some of the discussions going on here. The question
is, if you had it all to do over, would you buy the radio?

I've got a Doghouse memory expander for the 300 if you're interested. No soldering. You remove a socketed IC and plug in the Doghouse unit instead. It's a small box that connects to the scanner via a ribbon cable. You end up with 1000 channels...20 banks of 50. It only attaches to the radio...no AC required. $50 bucks takes it along with the illustrated manual.

It also works with the 250.

Yep, it's hooked in with Vancouver, Wa and Milwaukie, Or as well. It's a strange setup but thats the way it is. Milwaukie is even part of another county (Clackamas) and Vancouver is another state. It still has problems like dead spotsall over the west side, shitty audio quality, long wait times for open channels, etc. Surprisingly none of it makes the paper. After it crashed for 5+ hrs during a windstorm the press made a few articles abut it but after that, nothing.

rjm@hookup.net wrote:

>Please advise if you are aware of a publication of Toronto Frequencies

If you must have a book walk, don't run, to your nearest Radio Shack Store and get the latest "Haruteq Scanner book the Ontario Edition" this is a great book, just about eveything you could ever want, and it comes out evey year (I think...).

If you want a list that is just about as good try some of the web pages with lots of info, just do a web search for "Ontario scanner frequencies", you will find lots. Or if your computer is up to it you can down load the mother of all Canadian frequency lists from:

www.ic.gc.ca/ic-data/telecom/telecom-e.html

Here you will find about 80 MB of just about all (not the cops or mil.) freqs. It gives the Lat. and Long of the antenna, the height of the ant. power and much more. It tells you who and what freq. Can't ask for more. I am sure it is the basis of the Haruteq book. Anyway it's very large and broken into about ~12 blocks of 1 meg each (zipped) the site is a good one (fast) so if your computer can handle large files (each 1 meg block unzips to about 5 meg then go for it and do a text search or use a data base program to find your town. (the list is in order of frequency). I have downloaded it all and it's well worth it.

Have fun, let me know how you make out.

Kevin

Just for general info, there is a way to decypher this besides buying
a decoder. Just take the IF output from a receiver (scanner or
whatever) and input this to an HF receiver and tune in the IF freq
(455Khz or 10.7Mhz or whatever) and set to USB and use the passband or
fine tuning or main tuning and there you have it. I have done this
with a local Taxi company that uses freq inversion
encryption/scrambling. It is not the clearest, but you are able to
understand it.

Tap into the IF output of your scanner/receiver and input this to an
HF receiver. Tune to whatever the IF frequency is, 455Khz, 10.7Mhz,
whatever. And use USB or LSB mode. It does work. I have used this
method to tune into a local Taxi company that uses freq inversion
scrambling. It is not the clearest audio, but it can be understood.

Adam 12 used a valid unit ID and valid LAPD callsign.

"M> One other question what sections of LA does KMG-365 Cover and is there "M> really a squad 51 Rescue/Paramedic unit in LA County?

I believe the callsign IS valid for LACoFire, but there is no Station 51.>>

We've gone over this time and time again. So, here's one more time...

Yes there is NOW a real "Station 51" in the Los Angeles County Fire Department. Last year, or earlier this year, Station 60 located on the premises of Universal Studios in LA was renamed "Station 51" in honor of the series.

The call sign "KMG 365", according to POLICE CALL, is assigned to the City of Bellflower.

Got some old RS Patrolman scanners. PRO 7A, pro 14 and Pro 45.
They use xtals. Is each xtal only good for one frequency?
2) One scanner is missing 2 xtals- can i put a dif freq xtal in there to get
a dif freq?
Right now none of them are picking anything up,even with roof discone.

3) Is there 800mHz xtals?

thanks in advance for any help with these.

>>come into this news group raising hell with Bill afterwards. Andy
>>Moss, Hugh Duff and John Mackey have already done it. Mackey seems to
>>be the only one left. You place yourself in good company. Carry on.

>If memory serves, Quarnstrom was not ejected from the SCANRADIO forum

Your memory is correct this far. Of course, I posted the same
information just a few days ago.

>on Fidonet. He popped in to do some "technical potshooting" at me,

I corrected some misinformation that you posted.

>and didn't like it when I disagreed with him. He got snotty and was

I beg to differ. You were the one who got snotty. I remained direct,
but reasonably polite, otherwise you would have bounced me out of the
echo.

>warned about it.

Threatened is more like it. In the meantime, you and your sychophants
were free to badmouth me at will, and I could not respond.

>Then he disappeared. End of story until recently when he found his
>way onto the newsgroup here.

Nice phrasing. It implies that I gave up or was intimidated off the
FIDO conference. The facts are otherwise, but are not relevant here.

>Summing it all up.....Quarnstrom is NOT a participant; he's just an

I am as much of a participant here as you are, although not so prolific. You conveniently forget that I posted empirical evidence supporting your position on coax deterioration, for example.

>instigator and troublemaker.

That is a blatant lie, Mr. Cheek, and typical of your attack style. I am not the one indulging in namecalling, insults, profanity, forged posts, e-mail harrassment, and changing the titles of threads to imply that someone else is an "instigator." You also avoided responding directly to most of my facts about your history and style, instead responding to a third party in hopes of drawing them into the fray.

But even if you could prove beyond the shadow of a doubt that I was the nastiest fellow since Ghengis Khan, that would not excuse your actions.

Proving me a troublemaker would not make you innocent. Proving me wrong does not make you right. The fact is that YOU are the instigator and troublemaker here, and erecting strawmen and setting them afire will not prove otherwise. The evidence is available for anyone who wishes to research it.

It's not just the filtering that cock it up Sid.

The following is not a difinitive thesis on the subject but hopefully it will explain a few of the problems in recovering DATA sent via the radio.

Basically, most DATA information is sent as a binary stream. (Digital rather tham anologue) This means that each little piece of data consists of lots "on and off" signals. (0 & 1)

(You can liken it to morse code. Morse is a data streem that is either on or off!)

The "on/off" signals are (or should be) square wave. This means that no other state can exist. It MUST be either ON or OFF (It cannot be half on or half off!)

When this square wave data gets recieved on a radio that is not specifically designed for data reception, the recovered signal from the discriminator gets "Conditioned" according to the requirements of ordinary NFM speech audio. This some what modifies the nice square wave into a distorted data wave form.

(I won't go into the subject of pre & de emphasis but it has a bearing on unwanted modification of a square wave!)

Then add to this distorted data signal, any further distortions caused because of the audio amplifier non linearity and any "Base or Treble" control/boost that you may have.

ALL-IN-ALL. stuffing data through a non-data amplifier can mean that the recovery of the reliable data very dificult.

There one graet improvement is to "re-condition" the recovered data by taking the distorted data signal and feeding it through a simple circuit (a schmitt trigger) that will attempt to restore the "square waveness" This can be quite successful IF the signal is not too distorted.

The easiest way of recovering clean usable data is to take the square wave signal directly from the discriminator BEFORE it gets modified by the filters and audio stage of the receiver.

Then you can feed it directly into a threshold detector circuit. (a
schmitt trigger again). This will then give you a signal that can
easily be handles by the computer...

Steve is right on the money. While you can purchase parts and build it on your own, the Motron is an excellent value for the price! It does flat out work as advertised. Has a good size LED display, memory for storing the decoded numbers, free software for direct inputting into a pc, and a well built circuit board. All you need for portability is a cabinet and a power source for the DC. You cannot beat the price !!!!

If the tenna is a 300 ohm, then get a Radio Shack Balun, for a few
cents. This will take it to 75 ohms. And don't forget to turn the
TV antenna sideways for vertical polarization. :-}

Hi,

I've been running OptoScan with a PRO-2006,
for several years now. I'm using a 286, SVGA,
with two hard drives, "C" and "D". I recently
moved all my OptoScan program and files from the
C drive to the D drive. NOW, the program seems to
work, but when it stops on a signal, it stays there,
and does not continue to scan when the signals stops.
I moved the program and files back to C drive, and
the same problem persists. I checked all the switches
in the program, and don't see any thing that would help.

YOUR help would be appreciated.
Thanx

First, I have a Discone in my attic and am really happy with the way it works. But I've heard much about using TV antennas for scanners. One problem that I have is I thought most TV antennas are designed for either 300ohms or 75ohms? If 300 is the correct answer, where can I get a balum to match to my 50 ohm scanner? If 75ohms is the correct answer, isn't that still too much of a mismatch to take advantage of any extra gain a TV antenna might have over a Discone with had a 50ohm impedance?

Thanks,
George

John,
The power supply from Radio Shack will work fine for your
application. The 3 amp specification is the maximum current that unit
will supply. I suspect that even with both radios running at the same
time, you'll only "pull" about 1 amp. Thats good though, that means the
power supply will be operating well within its limits. However, for
running a piece of electronic equipment, make sure to purchase a
"REGULATED" power supply. That simply means that even if the load
changes (and as long as the power supply isn't overloaded), the voltage
will stay within about 3% (hopefully) of the rated voltage. That's
important because a low voltage situation will impair the functionality
and a high voltage condition may fry the unit. One question: why are
you going to convert the 2006's? Just wondering.
Shawn

I am moving and after clearing out the attic I found my old scanner. I was thinking of putting it in a yard sale (or the trash), but thought someone knowledgeable could tell me if this oldie might be a goodie? I will describe it a little below. Thanks.

Craig (Model 4354) receiver, circa early 1970s

Made by The Craig Corporation, Compton CA

...owner's manual

...twelve channels

...3-bands

...FM monitor scanner

...program VHF High, Low, and UHF frequencies

...priority and weather channel monitoring

...mobile or base

Pat

"All paths lead to home."

Message-ID: <53saj3$t2q@coranto.ucs.mun.ca>
Source record: 220339

I am looking for a 800 MHz mod and/or keypad tricks for the BC-8500.
I am looking for the diode cell mod not a virtual one. I believe
that one exists because it was made before the 1994 cell ban and
made around the time of the BC-890XLT, BC-200XLT, BC-2500, etc,
that all had diode cell mods. I know that only ones made before
1994 can, so some BC-890XLT's (newer ones) can't.

I never seen a diode mod for this scanner but believe that one is around
for it. Could some one please let me know if it can or can't. I checked all
the mod sites that I know of and no luck. It would be strange if one was
not around for this scanner because like I said before, every Bearcat 800 MHz
scanner made before 1994 (one I knoe of) could have a diode or wire cut cell
mod.

> problem that I have is I thought most TV antennas are designed for =
either=20
> 300ohms or 75ohms? If 300 is the correct answer, where can I get a =
balum to=20
> match to my 50 ohm scanner? If 75ohms is the correct answer, isn't =
that=20
> still too much of a mismatch to take advantage of any extra gain a TV =
antenna=20
> might have over a Discone with had a 50ohm impedance?

No. If you were to watch the resistance/impedance of your discone as you =
tune up a range of
frequencies you would see it rise and fall like a roller coaster. The =
resistance will go from near zero to
over 500. The 75 ohm mismatch is nothing and the extra gain won't be =
lost. There will be exceptions.
No antenna is perfect on every frequencies. I have 6 different antennas =
I use for scanning. Each antenna
out performs all the others at certain frequencies. Is there a point to =
this? Beats me. The closest I=20
can come to one is try it and see. Roll that TV to vertical, use the =
300/75 transformer and see what
happens. It is bound to show improved reception on a number of frequency =
segments, but it won't be
perfect everywhere.

Be sure and share your results with the news group if you try it.

Good Luck,

Glenn

A person is just as responsible for their actions on the Internet as anyplace else. I beg to differ with you that "there is not a trace of any evidence on this common anarchy usually called the internet." Anything you post on Usenet is archived, sometimes in several places. Don't think for a minute that you are so slick that ANY one of your posts can't be tracked to you. Libel would be more appropriate than slander and is a lot easier to prove also.

People...get real.

did someone call his daughter a bad name, inferring social
put down or more...?

That person can say his daughter all he/she wants.

It's generic and it signifies nothing specific....

Libel or Slander arises when his daughter is identified
by her given name on her Birth Certificate and Social
Security Account. You have to slander her by name and
be sure that no one else in his family is called by that
name....the accusation has to be "name-Specific"....

You have to insult her credence in some way by what you
say to the world identifying her by NAME. She has to be
Specificly affronted to the nth degree so much so that she
is laughed at and ridiculed and scoffed in public because
of this libel or slander.

There are a couple of websites that claim you can use PD
v2.03 with a Baycom packet modem. I haven't tried it myself
so I don't know if it really works.

> a dif freq?

Yes, you can purchase crystals for $5 at Radio Shack. They have a mail order catalog and the service, in my
experience, is quite prompt. Be sure to have the model number with you when you order, since there are two
kinds of crystals, each made to work with a different intermediate frequency.

> Right now none of them are picking anything up,even with roof discone.

Are you sure that

Hello Bill,
I've been reading messages in this area for about a month or so.
I've noticed that many people seem to have a problem with your messages.
Its also very evident that you know your stuff!
I have one simple question for you.

"Are there any mods that can be performed on a Realistic Pro 2011?"

ANY you know of, or maybe where I could look for info, would be of some
help.

Yes, I know its a piece of shit.
Yes, I know that I should buy a new one.
But... NO, I don't have the money right now.
and I DO have the 2011 laying around.

Thanks,
James

I have a Realistic PRO-66 handheld scanner... (New in the 1997) catalog.
This scanner has a problem with its low battery circuit.

Wwwhen using Nicads, the battery warning activates and shuts off the
scanner when the batteries are fully charged at times.

I figure this scanner has the voltage sensor set a bit on the high side
when it comes to nicads.

Has anyone figured out the low battery circiut on this scanner yet so as
in order to deactivate it?

Does anyone know the correct mods for this scanner????

I found one place that had one

ftp://ftp.qrz.com/mods/bc890xlt.txt

but the instructions are very vague and as a result I lost my lowband 27 mhz - 66 mhz. I put it back the way it was and every thing worked fine. So if any one could offer the correct mod for my scanner I would really appreciate it...

Thanks in advance

T. Carr

P.S. here is a copy of the mod I downloaded.....

Subject: bc890xlt-800mhz full restore

1. remove all cabinet screws.

2. remove 4 face plate screws and 1 bracket screw at center of main board.

3. carefully depress the outside edges of faceplate shield and tilt down.

4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.

5. remove faceplate and logic board.

6. position board so microprossoe chip is on left and memory battery on right.

7. locate the 3 chip resistors at chips upper right..marked 104 and

carefully desolder.

8. install the chip resistor at the 2 empty pads closest to memory battery.

(The chip could be on several different padds.. Horizontal or vertical Could you be more specific I tried many different combinations and none worked...)

9. reassemble carefully in reverse order.

10. test by entering freq. around 870 mhz.

1236. AOR-8000 Switch Problem

The power Switch knob on my 8000 has started just spinning in place with out turning on the radio... (My wife played with it. Grrrrrrrrr)

If you push down on it it will engage. Is there anyway to tighten this up. I can't see a set screw and the knob won't come off with gentel pressure. Has any one had one of these apart to see what holds the knobs on..

As an aside I love the radio but the knobs are a little cheezzy. For what the radio cost it seem sort of cheaply made.

>
>
Hi, I have a Pro 51 scanner. I bought it when it first came out.
I tryed the Mod, listed above, but i still can't get it to receive betwene
823.9375 and 851.0000 and betwene 868.9375 and 896.1125. Can you e-mail me
some more explicit instructions on how to perform this Mod? I would really
appreciate it!
The way I understood it was that you first turn the scanner off. Holding
down the 2,9 and L\O key, you turn back on the scanner. Now, there is about
20 or so freq. already programed, what are they? I then pressed "manual" to
stop the scanning, and entered 30 and the down arrow. I stoped it with the
squelch at 29.00 MHz, and stored it in the Mon. bank. I then scanned down
from 29 to 956.000 and stored 956.000 in Mon. bank 2. Is this right? From
here i programed the two Mon. freq. to permanet locations in 1 and 2
respectively. Last, I program the limit to LO 821.000 and HI 853.000 then I
scan betwene them. It does not scan in the blocked out freq. How do I get it
to work? Can you please send me mail with exact instuctions on how to open
the Cell freq?
Thank's in advance, pbr2@themall.net

HI.

My son recently destroyed my BC200 and I would like to replace it.

I would like to get a similar scanner that has the ability to be modified to receive the cellular freqs and has a fairly low scan step rate. I am willing to spend more this time (300-400$).

What would you recommend?

Thanks,

George

You may wish to purchase a standard TNC cell phone antenna for $8 or so,
and a $3-$4 TNC to BNC adaptor from Radio Shack. We've found that this
combination works well.

I am picking this thread up half way through - It may not be crappy
software or even difficulties with the sound cards.

What MUST be appreciated is that the data signal is square wave. If
this is recovered off air by way of a radio receiver NOT DESIGNED for
data reception, IE a general purpose vhf/uhf scanner type radio, then
the square wave WILL get distorted. 95% of this distortion occures in
the audio stages after the discriminator.

The rise and fall edges will be rounded and various other distortions
will be introduced that will make the translation of the data into
readable text.

With even the BEST software available, if the signal being processed
is distorted to any degree, then the decoding will be low reliability.

The audio level setting (volume control) is usually hyper critical and
even a minute variation off the optimum level will cause the decode to
be nil....

On the other hand....

The more reliable way of decoding the data, for the average hobbiest,
is to try and get the signal as it appears from the discriminator.

The advantages of this are:
1) the signal is more "pure", relatively speaking.

2) it is at a fixed voltage level (in the order of about .7v) Ideal
level for feeding into interfaces (or the adudio stages of external
amplifiers such as line inputs to sound boards)

If this is fed into an interface, the optimum level can be set by a
very simple "preset" potentiometer inside the interface.

Although still fairly critical (unless more expensve circuitary is
used to incorporate an agc or vogad) but is not so critical ar direct
audio from the "extension speaker socket"

3) totaly independant of the volume control. This means that you can
adjust the "listening" audio to any comfortable level whilst setting
up, then the volume can be turned down to nill.

4) far higher ratio of accurate decodes - upwards to 95% or better

So: what to do next? Don't just junk the software until you have tried
with recovered signal from the discriminator output...

I recently posted a mod for the FRG9600 for discriminator access. Will
be happy to email a copy of this mod to you if you missed the first
posting. I will be doing one for the AR8000 soon & will post that when
so done!

Email me at: D.Gray@AutoComm.Cityscape.co.uk
for the mods...

Also email me if you are interested in interface kits for the
AR8000/2700 . Also Data conditioning interface kits fo use with any
radio.

regards to all

Not necessarily so Bill,

If the man had ONLY one daughter, identity would be obvious. Also the degree of embarassment needn't be that severe to seek recourse. I recall an instance some years ago when a young man was arrested for CRIMINAL libel just because he depicted a member of the local police force urinating on the Statue of Liberty in his underground newspaper. The ACLU intervened and the charges were ultimatelty dropped but I'm sure it wasn't a pleasant experience for the aspiring young journalist.

This is one for you tropospheric ducting experts:

Early this moring I tuned my BC 220XLT into the local Continous Marine
Broadcast (161.775 MHZ). Instead of the Sarina Coast Guard Radio
broadcast (about 50 miles away), I was treated to the C.M.B. from
Cornwall C.G. radio on the St. Lawrence Seaway!
I would guess it came from their remote facility in Kingston (?) about
400 miles away.
Keep in mind this was strong enough to completely cover the local
broadcast.

I check the other local C.M.B. frequency (161.650) and found it to be
loud and clear with local information..

Any in sights?
This has happened before, usually this time of year..

The temp was about 50 degrees F. and the barometer was on the rise at
about 1015 millibars.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

This introduction is intended for people new to the scanning hobby and is oriented to scanning in the USA. It tells where you can buy your first scanner, what features it should have, where to get it repaired if required, how to get frequency information, and mentions a few scanner clubs worth joining.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by what they overhear on their radios. Police cars, fire engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air

Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and

the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which

gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US

Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to

use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 500 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.uark.edu/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago

chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
60 old and new scanner radios and monitor receivers. Other
topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units

unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot

on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. | Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while

scanning banks of mixed band frequencies. Great radio, otherwise.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks | of 40 channels although bank sizes can be changed. 100 Auto | store and 100 Skip memories but that can be increased by | reallocating channels from the conventional scan banks. | Fixed and programmable step sizes. Relays clickey-clack |

while scanning across band boundaries. Triple conversion, | First IF is 48.8, 778.7, or 266.7 MHz, depending on band. | Second and third IFs are 10.7 and 0.455 MHz. Rugged | construction. External power supply. DB25 RS232C | connector. Ok scanning and great searching performance. |

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in

binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent

display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed

backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT.

Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base

versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through

into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are

unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For

more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by

the transmitters in the map coverage area. Send check or
money order payable to Bob Parnass for $25.95 for standard
or $29.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

1259. Crystal scanner?????

Newsgroup: rec.radio.scanner
Date: 1996-10-14 00:00:00 UTC
From: Charles Simmont <"Pirate@Garden"@hvs.com>
Message-ID: <53ufm7$qi9@news.indirect.com>
Source record: 220397

I am looking for an old style crystal scanner with 8-20 available channels. Condition is not important as long as it works, not looking for anything elaborate, just the basic. Thanks....

1260. How to Find Scanner Frequencies

Newsgroup: rec.radio.scanner

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books

The most convenient source of fire and police frequencies is the Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. Later editions have included a few pages of local airport and nonsensitive federal government frequencies. The 1996 edition contains selected business frequencies, too, but callsigns are listed only for local government and public safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is expected soon and will be available from Grove Enterprises for about $30. This second edition is crammed

full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the world's largest scanning club, the Radio Communications Monitoring Association (RCMA). Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350

Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined

the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a

local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's

transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1996 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges. The phone number for repair is also (800)297-1023.

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom

IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is

known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35 33K	replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K	try 220K.
Radio Shack PRO-2004	R148 47K	remove R148 or replace with 220K.

	On linear board,

I think the BC200XLT is a fine scanner for the price. For about the same price ~$250 you can get new AOR2700's which are about on par with the BC200XLT and has a lot more features. The 2700 is really hyped and sounds like a bullet of a scanner but it's not that great. It is better than the 200 XLT in 800MHz and mine came with cell unblocked. It's really a good scanner for searching the 800MHz band. The faults? In UHF and below it has reception on par or a tad worse than the 200XLT. Lot's of birdies in VHF-Low and MilAir. I had purchased it for MilAIr scanning and was very dissapointed. It's audio is fairly weak making it unusable in a car. I had expected a lot more because it used to be $400 and AOR had a pretty good reputation. I think the price now is what it should have been. Good points, it has capability for computer interface, Inversion de-scrambler chip, 20 second recording chip. It also has channel pass so you can block out annoying control channels during search. Normal sized earphone jack (instead of Bearcats crappy small one.) You can also select mode (AM/FM/WFM/Program (whatever that is)), step, and an attenuator. It's got a nice search feature which whips the 200XLT hands down. If the 2700 had a good receiver it would be awesome. Since you want to pay up to $400 Bearcat's 300XLT and Rat Shacks PRO-26 are pretty good deal. The PRO-26 is list at $499 but I see them all the time for under $400. The big beef I have with both is lack of computer interface capability. For that much cash it should have it. If your lucky you can find an AOR 8000 for sale used under $400 but you'd be lucky. I see a lot forsale around $500.

Hi Folks: I'm Mike in Philadelphia. I have reason to believe that some badass has bugged my home. I can't find the bug and have a large well-filled home.

But I have a scanner. Can anyone tell me what frequency a bug might transmit at? Maybe I can pick it up on the scanner.

Also, are there any newsgroups for bugging?

It has been suggested that I buy a 'frequency counter' and walk around with that, and write it all down. So I'll do that soon.

In the meantime, if you have a list of bug frequencies, I'd really appreciate your sending a copy to me.

Thanks...MikeG/Philley

For Crystal City monitor Arlington County's 800mhz trunk:

856-860.4375, 856-860.7625, 856-860.9375

Here you will find every county agency but when most government goes
to sleep after 5pm then you will get the Police, Fire, and Sheriff....

> there is no antenna, it has better reception. Any help is appreciated.
>
> Tisme
> This is not an analog scanner, it was the first digital scanner. There are sixteen channels available. whichever switches are up will be monitored and the rest skipped. To enter frequencies you flip a switch into "program" mode and by putting the switches either up or down, enter a value that will set that channel to the frequency determined by the switch positions. (Press down the spring loaded slide switch a couple of times). Just like the old computers we used to use. I have always been fond of switches and blinking lights. The 14 and 15 switches are for band selecting (VHF lo, hi, UHF as I recall) when programming. I wrote a basic program that is slightly different than the one posted, so if that doesn't work for you send me mail. I also have original manuals and schematics, but admit that my own unit is not working and I am baffled. IC's used were proprietary and are unavailable. Sometimes the switches are dirty so you cant select or program certain positions. I think they were nifty radios.

That is the same conclusion I've arrived at. It's like Mackey thinks Bill Cheek is the local gunslinger in town and to make a name for himself, he has to blow Bill away. Whether or not Mackey has any technical talent remains to be seen. Bill, at least has three books to his credit that have been fairly well received by scanner and radio types. So far, all Mackey has given us is flatulence and a few chuckles watching his prepubescent tantrums.

Mike, I'm afraid you'll need more than a "list of bug freqs". If your real good with the freq counter and real lucky you might do well. I would suggest a spectrum analyzer and someone with a little experience to run it. Look in the phone book under countermeasures or PIs. I happen to know there are good firms working in Philly.

Hmmm... Good question..... Yes, it could, but it is hard to
say.... I can look over the schematic I have of the 2006 and get back to
you and any possible ways that this could cause memory loss.

You could verify the POR circuit with an analog scope but it might
take a couple of attempts. You would need to connect channel 1 of the
O'scope to 5V on the scanner to use as a reference, and probe with
channel 2 on the lead of the capacitor that connects to the resistor.
When you turn the power on you should see CH1 immediately register 5v and
CH2 transistion from low to high a few hundred milliseconds later. If
you have an analog scope, this may take a couple of tries, if you have a
digital storage scope then it should be no sweat to catch the pulse.
Once CH2 goes high (5V), it should remain there until power is removed
from the scanner. If a voltage remains on CH2 after CH1 has dropped to
zero (the scanner has been turned off), then your problem is probably
related to the diode. If both channels transistion simultaneously
without the few hundred millisecond delay, check the resistor first with
a DMM and look for a value of 100K Ohms plus or minus 10K. If this
checks out then replace the cap.

Also, before doing any of this it might be a good idea to check the
bottom of the PCB for solder shorts and the like, and also check for any
metallic debris that may have entered the case.

I hope this helps.....

1277. New Newsgroup

Newsgroup: rec.radio.scanner
Date: 1996-10-14 00:00:00 UTC
From: Jim Wayda <jwayda@cogent.net>
Message-ID: <3263238D.2589@cogent.net>
Source record: 220415

I prepose a new news group. It will be called

rec.radio.scanner.cheek.feud

The feud can continue on the new newsgroup, and rec.radio.scanner can
return to the topic of scanning?

What do you all think?

Jim Wayda
Captain, Scanner Price Police.

Ba> bill

Please quote some references for your statements.
Read California Civil Codes Sections 45, 45a and 46
and the references included in Deering's California
Codes. No name is needed - just a reference that will
enable anyone to identify her - such as "your daughter."
I only have one daughter. A remark (impugning someone's
chastity) that is spread by oral, mechanical or any other
means is slander. A remark that doesn't require interpretation
is Prima Facie evidence of libel and doesn't require any

laughing, ridiculing, etc. for a finding of guilty.
We haven't read the Federal laws yet, so I can't expound on them.
If Mackey is reading this, a simple and sincere apology will go a long way at this point and save a lot of time and trouble for all involved.

I have an old Bearcat 210, but it is only a 10 channel scanner. I bought it back in the late 70's for about 150 $. It has been through hell, and is still in use on my desk as my primary scanner for local calls, out of the 8 scanners that I have. It was actually my very first scanner. Out of those 20 years I had to send it back to Bearcat for service only twice. Both times was because I had accidently plugged it into a 220 vac outlet. Although it may not be worth very much $$$ now, in my opinion it is a very reliable unit.

You and a couple others guessed right. Talked to the phone company
and the rep I talked to said she had the same problem herself. If
they are going to change their ways time will tell. Guess I can
just turn the ringer off when I go to bed. :-)

> I suggest that you try putting a paper sack over the cordless

Terry, I got Yupiteru MVT7100 from Atlantic Ham radio last year and
its a great radio, full coverage, very sensitive, shortwave all the
way to the gigahertz.... cellular, cordless, cb vhf police
air,, you name it. the Yupiteru will receive it. Unless you live in
a big city like Honolulu or New York its too sensitve it will jam up
with noise.. Other than that Its nearly a perfect radio,
Cheers,

Mj> transmit at? Maybe I can pick it up on the scanner.

You might try giving out some false info that the bugger
would hear and act upon. Just don't make it obvious by
doing something like talking louder when doing it. If it
seems like someone is acting on the false info, then you
can get serious about finding the bug.
There was at least one guy who sold bug detectors and put
out a catalog but he just got arrested for selling bugging
equipment.

Used to have a similar problem with an AT&T 4000 series cordless (old).
It would make al the phones in the house ring. I called telco on it and
they called it "phantom ringing". They blamed it on my cordless phone
but said they could fix it.

Apparently, They were tesing my line at night but we did not have a
"network interface unit" at the demarcation point of the house - it was
just an old carbon block portector. The test signals messed with the
cordless phone which was sending back hook flashes - this made the
testing facility ring back our line.

The telco came out and put a new NIU on the house and it the problem
went away.

It's someone elses phone. Maybe a guy is calling his girlfriend, or husband calling wife from work.

You probably live in an area where someone else has a phone just like yours, or someone whose phone gives a similar data burst (it tells the mobile unit to 'ring').

I have seen this happen on the older, cheaper AT&T (800 model?) phones which have only a couple of channels available.

To fix this press *channel* (if yours has a channel button). If this does not solve your problem, then remove the power cord from the base of the phone for about one minute and plug back in. Some newer phones reset the 'seed' channel when reset.

Do you receive many cordless calls on your scanner in your particular area?

Dave
(Scanner Flatulaire)

It would be interesting to see what would happen if someone boosted the data burst to cover, oh..let's say, about a mile radius...would a lot of phones ring?

You always say "WE". What does that mean. He has three books
published. Plus titles
are for men. There was a day when intelligence and merit alone stood.
If all you look
at in a man is the funny initial after his name, you have a lot of
growing up and learning
to do. I have no education, titles, or funny initials. I am very
respected for what I do.
I don't need them.

> The
> rest of my beef is with his arragonance.

Who are you to judge who is arragonance. You sound like a war protester
just protesting
because you have nothing better to do. I sure somewhere you have a
bumper sticker that
reads, "Nuke the Whales." If that is you only two points, you have made
them. You don't
belive in Bill credentials. Ok point taken, made and noted. You think
he is arrogant. Ok
you made you point, point taken made and noted. Go on, there are other
more arrogant people
in the world that are well worth you talents than Bill. Take on a new
challange like the
Rev. Mel Sharpton. His arragonance outshines Bill's 100 to 1. That is
a challange.

Joseph

Do yourself a favor!

Get a copy of POLICE CALL 1996. NOT the same as the Police Call as
sold in Radio Shack... don't settle, don't be fooled!

Get it at Jun's Electronics or Henry Radio, both in Los Angeles.

You will thank me!

Uncle T.

>From what I'm reading, the current hot models are the BC9000XLT and the
>PRO2006. Anybody know anything good / bad about one vs the other?...

Among the 100+ scanners in my collection are one or more BC9000XLT,
PRO-2006, PRO-2005, R7100A, R8500, etc.

They are all top radios and choosing among them is daunting.

My PRO-2006 is more "bulletproof" (free from overload and images)
than my BC9000XLTs, which are pretty good to start with.

The BC9000XLT is more "fun" to use and has many more useful
features than the PRO-2006, e.g., super fast scanning and searching,
Auto Store, CTCSS option, tuning knob, and alpha display.

Some people connect their scanners to a computer and
exploit the powerful combination. The PRO-2006 can be outfitted
with 3rd party controllers, but BC9000XLT owners are still
waiting.

If you want a computer controlled scanner, consider the
PRO-2006, but add up all the hardware and software
costs involved first.

If you don't need to connect your scanner to a computer,
I recommend the BC9000XLT equipped with a CTCSS board.
My PRO-2006 has been collecting a little dust since
installing BC9000XLTs.

From the FAQ:

BC9000XLT (Uniden): 1995 vintage. High quality base using
up-conversion. 500 channels in twenty banks. Up to 250
channels can be programmed with alpha labels. Tuning knob.
Selectable AM, NFM, WFM modes. Optional CTCSS decoder.
Very fast scan and search. Can lock out 50 channels during
search. Delay and attenuator independently programmable for
each channel. Effective Auto Store feature stores unique
frequencies. Good RF section, but not as robust as PRO-
2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One
urban user, located within a couple of blocks of several
high power transmitters, reports severe desense problems.
See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in

Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

Reprints of articles from Monitoring Times are available for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

x---------- CUT HERE ------------------------------------x

- 1 -

THE RADIO SHACK PRO-2006 PROGRAMMABLE SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-2006 is a 400 channel, wide coverage scanner radio, manufactured in Japan by General Research Electronics. It is the successor to the PRO-2005 and a grandchild of the PRO-2004, the super scanner which put Radio Shack out in front of its competition in the base station scanner market.1

The PRO-2006 is almost identical to the discontinued PRO-2005, with the exception that the PRO-2006 boasts HyperscanTM, a catchy way of saying that it scans fast -- about 26 channels/second versus the PRO-2005's 16 channels/second rate.2 At about $400, the PRO-2006 is $20 cheaper than the PRO-2005 was. Both scanners are built using surface mount components and are housed in a gray plastic cabinet.

Frequency Coverage

The PRO-2006 covers 25-520 and 760-1300 MHz, except for 2 gaps in the cellular telephone bands. The two gaps in the 800 MHz range can be restored in all the Radio Shack continuous coverage scanners by removing a diode. Diode D502 is the culprit in the PRO-2005 and PRO-2006.

A matrix of diodes, attached to the microprocessor's input port, is often used to configure radios for sale in different markets. The diode matrix on new the PRO-2006 is located on the vertical circuit board just behind the front panel. There are 2 diodes present, and holes drilled for 2 more.

Lots of Memory

----

1. "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

2. "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

The PRO-2006 has the usual features that scanner buffs have come to expect: individual channel lockouts, selectable 2 second rescan delay, an external speaker jack, etc. Casual scanner users don't need 400 channels, but scanner hobbyists can have those channels filled up in no time flat, especially with frequencies in the vast 225-400 MHz military air band, and other federal government allocations.

With so many channels to program, one dreads the thought of a power failure, which could clear memory in a hurry. Not to worry, the PRO-2006 memory is backed up by a conventional 9 volt alkaline battery (not supplied), which should be replaced every 6 months or so.

The 400 channels are divided into 10 banks of 40 channels each, and one can select or deselect any channel bank from the scan list. Individual channels can be locked out in the customary way, but the PRO-2006 maintains the handy feature introduced in the PRO-2004, a LOCKOUT REVIEW. Successive depressions of this key step through the locked out channels.

Scanners worth their keep have a priority feature, with channel 1 usually designated the priority channel. The PRO-2006 is more flexible; any of the 400 channels may be designated the priority channel. When the PRIORITY key is depressed, that channel will be sampled every 2 seconds, and the radio will stay there if a signal is heard.

The PRO-2006 has two scan speeds, which measured approximately 13 and 26 channels/second. While scanning at high speed, the PRO-2006 won't skip over weak signals like some of the AOR-2515 scanners do. Adding diode D501, situated at an unmarked location between D502 and D503 sped up the PRO-2005 scan and search rates by 25%. Adding the same diode in the PRO-2006 has no effect on the scan or search rates.

It has been claimed that a PRO-2005 could be made into a PRO-2006 by merely replacing the CPU clock crystal with one of a higher frequency. Don't believe it. Changing the PRO-2005 clock speed would affect both the rescan delay and the priority rate, and they would no longer be 2 seconds long, as they are in the PRO-2006.

When programming a channel, the PRO-2006 firmware sets the mode automatically, based on its idea of what mode is most prevalent on that frequency. This feature saves extra keystrokes, and makes one appreciate the thought that went into the design of this radio. The default mode can be overridden easily, if need be, like to listen to a military mid-air refueling operation in the 225-400 MHz range, which is

mainly populated with AM signals.

Searching

The SEARCH facility found on most programmable scanners allows the entry of a pair of frequencies, then by pressing a key, the radio searches frequencies between those limits. The PRO-2006 allows for 10 pairs of limits! These pairs of limits are stored in their own memory, and don't use up any of the conventional 400 memory channels. One can set up several search pairs, for instance:

- 46.610 - 46.970 MHz: cordless telephones

- 144 - 148 MHz: the 2 meter ham band

- 418.625 - 418.900: Drug Enforcement Administration

Another unique feature of the better Radio Shack models is the MONITOR key, which stops the search and stores the frequency in one of ten special monitor memories. These memories are separate from the 400 main memory channels. The search can be restarted from where it left off by striking the up or down arrow key.

The user can select the search direction (up or down), and step size of 5, 12.5, or 50 kHz, although the PRO-2006 is intelligent enough to select a default step size based on the frequencies being searched. As on the PRO-2004 and PRO-2005, there is a hidden step size of 30 kHz, but this step size is only used in the cellular phone band after restoring full 800 MHz coverage.

The selected parameters are displayed on the LCD panel, smaller than the panel in the PRO-2004.

The DIRECT key allows one to start searching up or down from whatever frequency is on the display. Let's say the scanner is in MANUAL mode, and set at channel 26, which contains 460.100 MHz. Striking the DIRECT then UP-ARROW keys starts the PRO-2006 searching upwards from 460.100. This is a nice feature.

The PRO-2006 contains a "window detector" circuit, which is called into play during a SEARCH operation. This circuit

tries to detect when the radio is tuned close to the center frequency of a station, and prevents the search from halting prematurely, off to the side of the signal.

- 4 -

The AFC (automatic frequency control) circuit of the Bearcat 800XLT often causes a search of 850 MHz signals to halt prematurely. Even though the signal sounds on frequency, the display reads the wrong frequency. Neither the PRO-2004 nor the PRO-2006 have this problem.

The PRO-2006 includes a SOUND SQUELCH, resembling the VSC circuit on the ICOM R-7000, which may be used during scan or search operations. With the sound squelch enabled, signified by a red lamp above the pushbutton, the scanner will skip over unmodulated signals. This is handy for skipping over "birdies", link signals with a constant carrier, or baby monitors when baby is asleep.

The manual warns that the sound squelch may be fooled by signals with low modulation, and skip over them. The PRO-2006 SOUND SQUELCH tries to detect the presence or absence of modulation (not human speech), so unfortunately, it thinks that noisy dead carriers, digital data signals, and paging tones are worth monitoring and will stop the scanner to listen to them.

Taping Facility

A tape recorder can be connected to the TAPE phono jack on the rear panel, which provides 600 mV of audio at a 10,000 ohm impedance. An audio filtering circuit rolls off the high frequency components before they reach the TAPE jack, which makes it impossible to use it for picking off FM subcarrier signals. In addition to a rear mounted external speaker jack, there is a miniature headphone jack on the front of the scanner.

The PRO-2006 lacks a COR (carrier operated relay) output, like ICOM R7000 and older Bearcat 300 have, which would be useful for actuating a tape recorder.

Basic Performance

To evaluate sensitivity, the PRO-2006 was compared with it's grandfather, the PRO-2004. Since a signal generator was not used, quantitative measurements could not be made. Instead, an Antenna Specialists AV-801 antenna was switched between radios, signals from stations were compared by ear, and the results tabulated.

Simply put, the PRO-2006 proved more sensitive than the PRO-2004 on all bands tested, and much more sensitive in the 850 MHz range. The earlier PRO-2005 was also more sensitive

than the PRO-2004, but both the PRO-2005 the PRO-2006 let 800 MHz trunked systems and cellular telephone conversations bleed through while searching the 118 - 132 MHz commercial aircraft band. The 800 MHz interference was heard on the 2005 and PRO-2006, not the 2004.

Although the PRO-2004, PRO-2005, and PRO-2006 can suffer the effects of intermodulation, they are much more immune than the overly sensitive, image laden Bearcat 800XLT. Intermodulation from paging appeared on several frequencies above 1000 MHz, in a region not many people monitor. Oddly, audio from television channel 50 was heard on 1251.625 MHz. The PRO-2006 has a 10 dB attenuator, operable by a slide switch on the rear. The attenuator helps eliminate intermod, but few people would want the attenuator enabled while scanning or searching as it degrades both wanted and unwanted signals. A programmable attenuator feature, selectable for each channel, would have been a better idea.

The up conversion design of both the ICOM R-7000 and Radio Shack PRO-2006 allows use of a very high IF (intermediate frequency), which helps avoid image problems.

The audio output quality is good, although the top mounted speaker directs the sound at the ceiling, but adding an optional external speaker allows the sound to be directed at the user's head.

Unfortunately, the audio level of AM signals is somewhat below that of NBFM signals, requiring a slightly different setting of the volume control, although this has improved over the PRO-2005. When scanning both AM and NBFM modes, one has to find a compromise position of the volume control.

The PRO-2006 squelch control has a small amount of hysteresis, an improvement over its GRE ancestors. Too much hysteresis is like having too much play in a car's steering wheel, or backlash in a gear set. This hysteresis forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching.

Mechanical and Electrical Construction

The newest scanners use tiny surface mount components, which permits manufacturers to cram more circuitry into smaller cabinets. This technology makes home repair and circuit modification almost impossible. The "lick and stick" parts are so small it's difficult to tell a surface mount resistor

from a capacitor, and components are rarely marked with their values.

- 6 -

The PRO-2006 is smaller and lighter than the 2004. It is enclosed in a gray plastic cabinet, with a plastic front panel. If one is going to pay $400, one deserves to own some metal, but several stages are internally shielded in their own metal compartments. The entirely plastic cabinet of the older PRO2003 allowed wideband noise to radiate out of the scanner and into nearby shortwave receivers.

The PRO-2006 vertical front panel is an advancement over the sloping panel of the 2004. You can stack the scanner on top of other equipment and see the controls without standing up. If sitting directly on a table, two hinged plastic feet, padded with rubber bumpers, can fold out from under the front of the radio to tilt it at a good viewing angle.

There is a single BNC antenna connector on the rear of the PRO-2006, and the radio is supplied with telescoping antenna which screws in through a hole in the top of the cabinet.

Internal construction is excellent, and the internal shielding is commendable. Interstage shielding is very important in a wide band receiver, to prevent it from "hearing itself", an undesirable phenomena which results in birdies. The PRO-2006 owner's manual lists dozens of birdie frequencies. The shielding is much better in the PRO-2006 than in the 800XLT, which uses no shielding around the 800 MHz converter stage, and probably accounts for some of the birdies in the Bearcat.

Frequencies and other indicators are displayed on a backlit LCD (liquid crystal display) panel, and the level of backlighting can be dimmed by a pushbutton switch. As with the PRO-2005, the poor contrast on the small LCD panel makes it difficult to read a frequency more than just a few feet away, and is nowhere near as good as the greenish blue fluorescent display in the old Bearcat 300.

However, physically challenged and vision impaired scanner buffs will appreciate the conventional raised rubber keyboard in the PRO-2006, Only moderate pressure is required for actuation, and key depressions are confirmed by a mild "beep" audio tone.

The PRO-2006 is the right size to fit under the dashboard of intermediate sized cars, but there are few concessions to those wanting to use this scanner in a vehicle. Perhaps Radio Shack has been influenced by repressive laws restricting mobile scanners in a minority of states, like New Jer-

sey.

- 7 -

Although it can be operated on 12 VDC, neither a mobile power cord nor mounting bracket are provided. These items were included with earlier, pre-PRO-2004 Radio Shack models. The AC power cord is not detachable, and would have to be bundled up to keep it out of the way in a mobile installation.

Owner's Manual

The user manual is much better than the fold out sheet furnished with Uniden scanner.

A single page frequency allocations chart is included, but is very general. Trunked radio systems are mentioned, but only briefly. Most people buying PRO-2006s probably have other scanners and so will be somewhat familiar with scanning.

The up conversion design of the Radio Shack PRO-2004/5/6 allows use of a very high IF (intermediate frequency), which all but eliminates image problems. Ironically, the PRO-2006 owner's manual contains a section on images. This section appears in the manuals for most other Radio Shack models, and was thoughtlessly included in the PRO-2006 manual. It babbles on about images being 21.4 MHz away from the real frequency -- true for simpler models, but not so for the PRO-2006.

There is no schematic. Thankfully, detailed service manuals for Radio Shack scanners are usually available for $12.00 or so.

The PRO-2006 is warranted for 1 year, which is reassuring.

What's Missing?

So with all these neat features, what's missing from the PRO-2006? It would have been better to have more channel banks with fewer channels in each bank, say 20 banks of 20 channels. A "search and store" mode, like that on the ICOM R7000 and older Bearcat 250 would have been nice, and such a circuit is being marketed by Key Research. A lighted keyboard and a signal strength meter would also be welcome, as would a mobile mounting bracket and SCA output jack.

A frequency query facility, as found in the Uniden 200XLT, would have been very useful to finding in what memory channel a given frequency is stored.3 Mega-channel scanners

- 8 -

really need this feature and it would have been trivial to
implement in the PRO-2006 firmware.

Summary - It's Tops

If all one wants is a scanner to monitor local police and
fire, there are certainly cheaper and simpler models than
the PRO-2006. This scanner is the best base/mobile scanner
available at time of writing. AOR's AR-2515 has more chan-
nels, but its buggy firmware and tendency to skip active
channels prevent it from taking top honors. At about $400,
the PRO-2006 scans much better than the ICOM R7000, a great
VHF/UHF communications receiver, priced at over $1000.

The PRO-2006 has the right features and performance, espe-
cially for scanning the wide 225-400 MHz military aircraft
band and the newer federal law enforcement radio systems
with their dozens of channels.

I am trying to find an antenna mount that will allow me
to attach the pole to the side of my house. The problem
is that the roof overhangs the side of the house by 27 inches.

I have found several that hold the pole 6, 12, or 18 inches
out from the wall, but none that come anywhere close to 27.
If I could find one for 24 inches, I could probably make
some 3" spacers, but anything more than that is asking for
trouble. Does anyone make a wall mount that can clear a
27" (or even 24") roof overhang?

Is it the rubber knob that has failed? If so, call EDCO and get some
new rubber knobs. The new ones are thicker and are made of a harder
material. I've had mine for over a year now and they are still good.

Tell your wife to keep her hands off your knobs! [:-)))]

Is the knob itself rotating around the shaft (geez, that sounds rude!) or
is the shaft rotating with no effect? Pull the knob off to find out which.

: this up. I can't see a set screw and the knob won't come off with
: gentel pressure.

It should, pull hard. ;-) Mine come off easily.

: As an aside I love the radio but the knobs are a little cheezzy. For
: what the radio cost it seem sort of cheaply made.

Someone was marketing replacement knobs, and quite cheaply too. I don't
have their details, but maybe someone else can help ...

(FWIW, I think the AR8000 is a *great* scanner that suffers from a handful
of basic problems, like the one you mention, that could have been easily
corrected at little or no cost.)

My guess (and that's all it is) Is, that the phone company is
checking the lines. When they do this, (usually in the wee hours),
some times there is leakage to your ringer and you will hear a 1/2
ring.

I suggest that you try putting a paper sack over the cordless
phone, as it seems to be the only one that rings, so that the dirt
in the phone lines won't get all the place when they blow out the
lines.

Have a good day :-^}

I'm thinking of trying the TV antenna for a scanner, but where is the best place to put the 300/75ohm transformer. Should I put it at the antenna and run 50ohm coax to the scanner or should I put the transformer at the scanner and run 300 ohm twin lead to the TV antenna?

Tnx,
George

Hi,

The best "free" dtmf decoder I have seen is the one by ConCept Technology.
It is a DOS based version and is available for download on:

http://home.aol.com/pdrunen

This genius used the parallel port to bring in the data coming out of a
M8870 decoder. His program dates/times it and saves to disk. Even has a
very well drawn schematic of the decoder in the GIF format.

I contacted him last week and he said he almost has the windows version
completed. This one will use power from the parallel port to get away
from ext battery. I check his web site every day to get it! His email is
PDRUNEN@aol.com if you want on his list. This windows program will also
let you minimize the icon and still receive DTMF tones in the background.
he has added a wave file which speaks the dtmf tones as they are received.

Will let everyone know when the windows version is on the site!

He said he should have some PC cards aval very soon as his friend in Aust
is doing the PCB layout(s)! I use mine on my scanner and have no problem
logging the phones made on my personal repeater.

Well, that all for now!

Questions:

I'm aware that its legal to monitor things in the 46 to 49 MHz PORTABLE phone bands (but not cellular), and that it is NOT legal to divulge what you hear on those bands.

Queries are:

1) Where are those laws in the Code? and what is their exact wording?

2) What if you hear a neighbor talking on his portable phone, bragging to friends or girlfriends about such illegal things as (hypothetically), shooting my pet kitty with a pellet gun and killing it one day and, buying 30 grams of (this) drug and (that) drug on (this) day and to bring (this much money) to cover it at (this) place? and things said such like, say, "This stuff is REALLY great, man...I mean...LISTEN to how this stuff sounds when it burns!...(crackling noise)"?

3) Are those things legal to report to the POLICE, if not the public? or would it be ruled out as evidence due to a technicality?

4) And what would happen if someone warned a neighbor that I am monitoring to give him fair warning, and as a last ditch, no other way, effort to get him to stop harrassing and the like.

...All this "hypothetically," of course.

Todd

Hi, what you are seeing here is a radio propagation condition known as "
"tropospheric ducting". Simply speaking it occurs when sharp
differences in the temperature and moisture content at different levels
in the upper atmosphere permit VHF/UHF radio signals to be received,
sometimes hundreds of miles further than they can usually be. This can
often be noticed along the leading edge of a high pressure weather
cell. On a couple of occasions I have also heard Canadian CG broadcasts
on 161.775, also try checking 161.650, out of the New Brunswick area.
Listening to these freqs as well as the American NOAA
channels,particularly the lesser used freqs like 162.425, can be a great
way to know when a "band opening" is occuring and other distant stations
may be received. "Tropo ducting" conditions can also occure over large
bodies of water, here in NH, this will sometimes permit 2 Meter and 440
MHz Ham contacts with other Hams all the way from Virginia to Nova
Scotia , or to receive the Bronx Fire Dept on 154.190..

Does anyone know how I could easily convert the audio from an APT satellite into something that my AEA FAX2 would think was HF fax? Satellite audio is 2400 hz tone varying in amplitude.I would have to turn this into an 1800 hz tone varying in frequency. I was thinking of making an op-amp tone generator at 1800 hz and somehow modulating it with the satellite audio. Is this possible, and can anyone come up with a schematic? Thanks in advance !
P.S. does anyone know of any soundblaster demodulators that actually work?

It worked for my '890. I don't think it will work if your s/n ends in "D". What kind of 890xlt do you have that covers 27 to 60 mhz? Mine is 29 to 54mhz.

You're all missing an important fact:

The aliens don't base their timekeeping on hours/minutes/seconds.
kHz/mHz/gHz as we use them are based on cycles per seconds.

Since the aliens don't count in seconds, they transmit on frequencies
we have no way ever to recieve. <grin>

> fire transmitter in Bellflower.

We should put this in the FAQ.

The fire station that was used as "station 51" in the television show is an actual LACoFD fire station FS127 located at 2049 E. 223rd St. in Carson, CA, which is next to Bellflower. This would make the KMG-365 callsign appropraite for the psuedo station 51. If you listen to the dispatches on the show, 99% of the time, they are dead on for the actual location of the station, notice they always run with engine 36? That's the actual second in station for FS127. Rampart Hospital is actually Harbor-UCLA Medical Center, which is also on 223rd street in Carson, and is the primary recieving hospital for squad 36 (There's no sqaud at 127, just an engine and a truck)

Now, to clear this up, there *IS* a LACoFD Station 51, located on the grounds of Universal Studios, 3900 Lankershim Blvd. It is a fully operational fire station, housing an engine company, a paramedic squad and a patrol unit. It was formerly FS60, but was renumbered 51 just last year.

: Thanks!

It should work well for frequencies close to the TV band,
The responce will be highly directional, so point it
towards the stations you are interested in monitoring.
Most of the non TV transmisions are virtically polorised,
so re mount the Aerial so that the elements point up and
down rather than side to side.

Good Luck.

Richard.

George,
AOR has discontinued the 2700...so most places are unloading their
stock
in the low $200 range. Consider yourself fortunate if you can find one.
However, if this is your first or second scanner, I would recommend
buying
a Uniden BC-3000XLT instead which can be had for low to mid $300 range
and is worth every penny...IMHO.

1357. Re: PRO 25 or PRO 60?

Newsgroup: rec.radio.scanner
Date: 1996-10-15 00:00:00 UTC
From: Rich Wells <rjwells@vnet.ibm.com>
Message-ID: <32637546.2781@vnet.ibm.com>
Source record: 220291

Terry,
Personally, I would go with the Pro-60 given it has triple conversion
and
twice the channels. You can never have too many channels(well maybe in
some
cases ;-), and the triple conversion will come in handy if you travel
with
it even if you don't live near a large city which is bound to have lots
of strong transmitters.
The Pro-60 is a worthy successor to the Pro-43 which is/was one of
the
best handhelds ever made. It is slightly dated comapred to the newer
AR-8000
and BC-3000 but is worth the difference in price if you can get one for
sale.
The audio is much better than the 43, offers a direct tuning feature,
the ability to step through channels manually either forward or backward
and
has a nice stepping feature while searching. These last two features are
not
as handy as the VFO control on an AR-8000 or MVT-7100 but they are a
step
in the right direction.
As for scanning speed, I wouldn't worry about that too much unless
you
tend to scan more than 50 channels at a time. And the 60 can not be
moded
to restore cellular...I doubt the 25 can either if it is a newer design.

Strong signals,
Rich Wells

Message-ID: <32637724.446B@vnet.ibm.com>
Source record: 220292

George,
For your price range, if you really need cellular then I would
suggest a Pro-43
which is an excellent receiver and can be easily modified. However,
since you are
willing to pay this amount of money, I would suggest getting a newer
model which
today come with a lot more features and dynamite receivers.
You can get a Pro-26 in the upper $300 range(or if lucky on sale at
Rat Shack for
$350) or the BC-3000 in the lower $300 range via mail order. Pro-60s,
which are
identical to the trusty 43 with a few more features, can be had on sale
at Rat
Shack for $250; a very sweet deal if I say so myself!
If this is going to be your only scanner, I would stay away from the
AR-2700...
although the current pricing is nice(low $200 range), they are hard to
find since
they have been discontinued and have too many quirks. You'd be much
happier with
a Pro-26 or BC-3000.

While I think the 3000 is well worth a $400 price tag for the features and receiver
performance you get, you can get one mail order in the low $300s(I bought mine for
$334). The $400 price is the typical department store-style mark-up price for the
"manufacturer's suggested retail price". Phooey! Don't be had! Pick up a copy of
Monitoring Times or Popular Communications and shop around!

Terry Calof asks......

I have a Pro-60 and am quite pleased with it.

> Both these Rad Shack scanners are on sale in Canada. My questions are:
> 1) Can they be modified easily to open up the cell band?

The 60 isn't.

> 2) Is one superior to the other in terms of audio quality, ease of =
use,
> ergonomics?

Pro-60 audio on a scale of 1-10 is around a 7.=20

> 3) The 25 has 100 memories, but scans twice as fast as the 200 =
memory
> 60. Is this important?

Only if you scan lots of frequencies with no activity.=20

> 4) The 25 uses a double conversion receiver. The 60 has triple het
> conversion In real life is this an important factor?

I think it is. The triple conversion is far superior. If you live in the =
sticks and don't have any
transmitter sites around you might be OK but I myself wouldn't by double =
conversion.

I am not familiar with the Pro-25 so I can't compare. Maybe after input =
from 25 users this
will help. Good luck!

Just a quick note, I have an LCD DTMF decoder, assembled (less case), 16x2 line LCD display, 511 number non-volatile memory, all 16 tones decoded, 2400 baud RS232 output, scroll and clear buttons for sale. Current consumption is <10mA at a DC input of 5.1-40VDC (comes with a 9V battery clip all for $70.00.
If you want to see a picture and a full description, point your web browser to http://www.rain.org/~dschmidt

Message-ID: <5405ct$quj@ef2007.efhd.ford.com>
Source record: 220302

I've got a couple of old Radio Shack "Silent Play" FM transmitters that I like to hook up to my two scanners and listen to the activity on a small beater FM unit around the house.

I'd like to convert these Silent Play units to use 3V DC from a wall transformer (they currently use 2 AAA's).

I've got an adjustable transformer (12V-3V various increments) and it works well on the 3V setting, however there is a hum on the output of the scanner that is not there when using AAA batteries.

I see RS has some transformers in the 9V range and something on the box is advertised "reduced line hum" or something like that. I'd like to use their little 3V ones if possible, but they don't have that claim.

Any tips on reducing this hum? Also, should the power supply be regulated, and how? And should something be put inbetween the transmitter/power supply and scanner to prevent the scanner from being fried from the $25 PS/transmitter setup?

Please email if possible, I don't get to the newsgroups often. Thanks.

Tim Bohr

Most likely what you are seeing (hearing) is the periodic automated line test performed by your local telephone company. During the early morning timethey will send a signal down your phone line to measure the impedance of the line. If everything is within a certain value nothing is recorded. If the measurment is out of range, a trouble ticket is generated. Generally, this pulse is not enough to activate the ringer on your phone, however they may be sending a measurment signal at a level that your cordless phone will detect it as a ring signal and "rings" your phone. I had the same problem, except they would ring our regular phone. I called in a trouble report, but they denied that their test would "ring" a phone. Funny thing, I din't have any more late night phone ringing sessions.

I'm not a tropospheric ducting expert, but I've received xmns from stations below 160 MHz from quite a distance late at night...as much as 100 miles on rare occasions (e.g., St. Pete FD at 150-something from Orlando). Could it be that the phenomenon is not tropospheric but actual bounce off the ionosphere due to some rare condition? (I know the layers are usu. transparent to wavelengths much above 30 MHz *under normal conditions*)

I bet rec.radio.shortwave would have some guesses.....

Glenn,

It sounds like some sort of signal leakage from someone else's
cordless. I sometimes hear sounds during a conversation that are of
that nature...sometime's I'lleven hear conversations (until I switch
channels).

What the precise nature of the leaked signal is in your case, I don't
know.

The courts will not do anything but make a decision. Courts never "go after" anyone. Lawyers do. I'd worry about how good someone's lawyer is. And lawyers will go after anyone, if they think they can win a case.....

> >>Hell, first of all there is not a trace of any evidence on this
> >>common anarchy usually called the internet.

In civil court, you only have to prove things by a preponderance of the evicence - in other words, all that they have to do is tip the scales of justice in their favor, even only a wee tiny bit.... I think there is enough evidence to show that John Mackey wrote such comments.... Unless Mackey can prove a forgery....

> >>Second, if the US courts couldn't get OJ simpson with as much as was
> >>happening there how the hell could they do this?

Civil and criminal courts are different systems... Besides, OJ had the better lawyers...

1384. Re: BC9000XLT vs PRO2006 Recommendations Wanted

Newsgroup: rec.radio.scanner
Date: 1996-10-16 00:00:00 UTC
From: Rich Wells <rjwells@vnet.ibm.com>
Message-ID: <32650BFA.41C6@vnet.ibm.com>
Source record: 220068
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Dan,
If you're looking for performance and features then the BC9000 would win, in my opinion. The 2006 can't scan or search anywhere near as fast as the 9000. The 2006 is also much slower than the 2042.
The 2006 has no where near the features of the 9000 or the 2042. The 9000 and 2042 have Auto Store. The 2042 has lots of functions to move whole banks of frequencies around, swap between monitor memories, and delete an entire bank, etc. The 9000 has alpha-tagging, tape recorder control and a CTCSS option.
The 2006 has better intermod rejection than either the 2042 or 9000. However, what you loose is some sensitivity. So this depends on where you
live and what frequency ranges you like to listen to.
The 2006 and 2042 can be fitted with custom hardware boards and software
to allow them to be computer controlled(possibly opening up the cellular restrictions you are interested in?). However the hardware + software will
probably run you over $300 for these capabilities.
The 2006 has been documented extensively with all kinds of modifications
to speed it up, add more channels and banks, an S-meter, etc. etc. etc. Just
clipping a diode restores cellular.
I have all three and personally prefer the 2042. It's biggest drawback,
to me, is the funky keypad and its layout. I like the rotary tune which you
can use to quickly search through memory channels or frequencies. The 9000
has this too; the 2006 does not. The 2042 also has a nice direct frequency
feature...punch in a frequency using the keypad, hit TUNE and use the rotary
control to change the frequency. It's a little simpler than what you have
to do on the 9000.
I have a pretty good memory so don't make use of the alpha-tagging of the
9000. This is something a lot of people find beneficial though. I use it on
my AR-8000 but that's probably because it's easier to program the alpha tags.

The 9000 is a little more flexible with regards to either the 2042 or
2006.
The 9000 has 20 banks with 25 channels each. The 2042 has 10 with 100
while
the 2006 has 10 with 40.
Having said that, the decision is probably no easier to make. Like
they
say, you can't have your cake and eat it too. Each has its pros and
cons.
It's up to you decide which will give you your best return for your
money.

Strong signals,
Rich Wells

That's twice now that people have read my bolded "PORTABLE
TELEPHONE/MONITOR frequencies" and inserted "CELLULAR."

This is about the 44 to 49 MHz PORTABLE telephone (you know, with
portable handset and the base) and the baby monitor bands, people; NOT the
800 to 900 MHz, encrypted communication CELLULAR bands. Again...NOT NOT NOT
about the CELLULAR bands.

It's legal to monitor the 44 to 49 MHz freqs as far as I am aware. HAS
to be doesn't it? Else, what are people doing with a baby monitor? These
are those same freqs that are also used by portable "M.C." mikes, and the
like. You gonna tell me that listening in on your kid's Space Patrol walkie
talkie communication is illegal? and to divulge the acted out "Moon Base
one was destroyed by unknown missile! Send help! AHHHHH! Too late! Never
mind!" is illegal? THIS I gotta see in court.

The question is on the legality of DIVULGING what you legally are allowed
to hear on the 44 to 49 MHz bands, where related to personal, private
communications made using the phones which use those very same, unencrypted,
"obviously snoopable" frequencies. I want to be sure.

(They'll get it straight. They just need a coffee and they'll be fine.)
8-)

It doesn't have to be. Even if you are entirely in the right, you could
spend thousands defending yourself. Ever hear of a harrassment suit?
Also, there is plenty of *evidence* which the judge/jury can consider.
They decide what is or is not proven. Lawyers only present evidence.

> > Civil and criminal courts are different systems... Besides, OJ had the
> > better lawyers...
> Hmmm, my siser is an EXCELLENT attorney. :)

But would she defend you for FREE? If she's that good, she must make
MONEY at it. Even if you were sued and won, it'd cost you unless your
sister was really generous with family members.

> > > If Mackey is reading this, a simple and sincere apology

> > Mackey has done.....
>
> My sister tells me not to worry. :)

You'd have even less to worry about if you apologized and did not have to
face the potential of being sued. But that, of course, is up to you.
The best thing is to follow your attorney's advice. If she tells you to
forget apologizing, well then ... whatever.

About ten years ago, my wife and I went out to LA to see her relatives, and we took the Universal City tour. I remember seeing the "Squad 51" rescue unit parked out in the back lot. Does anyone know if U.S. is using that unit in the LACoFD station mentioned above? It would be a shame to mothball a functioning rescue squad truck.

I am looking to see if Bel Electronics performs calibration adjustments on their units. Upon checking with Circuit City they state it would cost $100 just to check the unit. I don't believe this price is correct since one can buy a new one for a little more. If anyone knows I would appreciate a line.

My response to you DID NOT mention cellular, , , I meant the 49
mHz PORTABLE phones. IT IS ILLEGAL TO LISTEN TO THESE FREQUENCIES.
SECTION 632 OF THE CALIFORNIA STATE PENAL CODE EXPLAINS THIS IN
DETAIL. There are similar FEDERAL laws about this. It is not only
illegal to LISTEN to these conversations, it is especially DUMB to
tell anyone about it.
EXAMPLE:
(hypothetically) I hear a conversation between a neighbor talking
to his broker. He gives him his social security number, account
numbers, bank account numbers, dollar amounts in savings, the
whole enchilada. What do I do about it?
NOTHING !
WHY?
Because he would be REALLY pissed about me listening in, and would
not focus on my attempt to point out the dangers of doing what he
did. AND MOST LIKELY he would report ME for listening in to his
conversations. do not pass go, do not collect 100 dollars, go

straight to JAIL!!

BOY ARE YOU WRONG ! !
Things have changed just in the five years! Congress passed a law
about listening to cellular AND portable phone calls. They did
this when a Congressman got caught with his fly open over a
portable phone.

Monitor all the above legally, just not cordless phones....not that _I_ would
worry about this law.....

>
> The question is on the legality of DIVULGING what you legally are allowed

You can legally 'scan' these bands, however you can't legally set up to monitor
a cordless phone freq with the INTENTION of intercepting phone conversations.
I wouldn't concern myself with calling the cops on someone you overheard; there
was the case of the woman in Tenn a couple years back that received a scanner
for Christmas, and while playing with it heard her neighbor plotting to kill
her (the neighbor's) husband. She told the police and the woman (the plotter)

was subsequently arrested. Unless, as you allude to above, use the conversations in some illegal manner, (i.e., finding out when your neighbor is out so that you can burglarize their house), you will probably never have a thing to fear from any law enforcement agency.

1399. PRO26 vs UBC-3000XLT

Newsgroup: rec.radio.scanner
Date: 1996-10-16 00:00:00 UTC
From: George Sambataro <wxperson@atl.mindspring.com>
Message-ID: <326536C8.456E@atl.mindspring.com>
Source record: 220083

I am deciding between the European version of a RS PRO26 and a Uniden UBC-3000XLT. Mr. Clough from
Javation has been very helpful in pointing out the differences but I figured I would solicit a
little more input.

So far I have found out ...
the UBC-3000 is a little larger/heavier radio, with slightly better speaker sound, better signal
rejection but is missing 560 MHZ - 750 MHZ.

The Pro26 is smaller/lighter and covers 25-1300 mhz (no gaps) however it is more likely to get
intermodulation/interference from some strong signals.

I like the idea of the PRO26 being smaller but don't want to sacrifice a whole lot just for size.

Any comments / opinions are appreciated.

Thx,

George Sambataro

: What a joke the legal system has become.

Some people lose sight of the real world here. No one gets into legal trouble unless someone else files a complaint against them. I mean you can listen to crying babies all day long and no one is going to get hacked off enough to call up and have you arrested (perhaps committed to an institution for being weird, but that's a different story...). But if you tape record your neighbor talking to his girlfriend and play the tape for him and ask for money the FBI's gonna be after you. Because you drove the guy to complain to authorities. You can listen all you want to anything you want and as long as no one gets ticked off enough to complain (or you aren't caught in the act by a cop) you won't get in any trouble. You'll just have the knowledge you're breaking the law.

1401. Broadening Frequencies

Newsgroup: rec.radio.scanner
Date: 1996-10-16 00:00:00 UTC
From: Nathan <unself@eastky.com>
Message-ID: <01bbbb8d$372735c0$0100007f@puerto>
Source record: 220085

A friend of mine has a newer scanner and would like to get a "fix" for is scanner so it can pickup a broader range of frequencies. I know with ham radio you can simple switch some wires on the inside to make it so you can pickup and broadcast on a wider range of frequencies, (i believe there is a CD-ROM called QRZ that has a huge list of them) anyhow This is for a scanner.

He owns a 'Radio Shack' Scanner Hyperscan Pro 2039... its 200 Channel and the serial# is C030102. What do we need to broaden the frequency range on it? The older scanners sold by radio shack could pick up the 900mhz range i believe it is (where cellular phones live) and this is what we are hoping to achieve, however the newer ones are *illegal* to sell to pickup that range. Anyhow I'm fairly sure it isn't illegal to fix the radio just to sell it like that. I know when they sold me my ham radio many years ago they actually gave me a printout on how to fix the radio to broaden the range at the time i bought it.

Please directly Email me if possible.. I plan on lurking in the group.. but i might miss the reply..

So far I have found out ...
the UBC-3000 is a little larger/heavier radio, with slightly better speaker sound, better signal
rejection but is missing 560 MHZ - 750 MHZ.

Is there anything of interest in the 560-750 mhz range?

writes:
> Can someone explain CTCSS to me, if a scanner can be equipped
>with one, what changes will be seen?

For the two posters who wanted to know about CTCSS tone boards and
their utility, here's a quick summary:

When the FCC assigns a common radio channel to two or more
organizations, they most likely would desire to hear only units from
their own organization and not the other(s). When they buy an LMR
(land mobile radio) system, they will be assigned separate "PLs" or
Private Line [trademark of Motorola] tones. These are sub-audible tones
that are transmitted along with mic audio. When like units "hear"
their PL, they open squelch to pass audio. When a unit from the other
organization keys up, the dissimilar PL causes the audio to remain
squelched. If you accidently key your radio while the other
organization is on the air, you normally get a warning tone telling you
to wait. Some LMRs have a BUSY light for this function. The Continuous
Tone Coded Squelch System (CTCSS) does not provide ANY encryption or
privacy. Scanner listeners can hear all conversations. If you have a
scanner with a tone board, you can filter out different organizations
on the same channel. In my case, I like CTCSS for GMRS (General Mobile
Radio System) in the 462.55 to 462.725 band. When the local high
school coach uses 462.575 for field-to-booth comms, I can filter him
out and listen for only a special coded transmission from other GMRS
users using 123.0 Hz CTCSS.

Sorry for the dissertation (I get carried away sometimes)

I think it has more to do with the bottom of the sunspot cycle and the distraction of the Internet's offerings. The largest segment of SW radios being sold nowadays are the nominal $200-$250 portables. With these receivers I think some would-be listeners are discouraged by not being able to hear all the second- and third-level signals from remote parts of the world.

>gets shitcanned off the server as it arrives. I'm answering this one
>because a hundred people....well.....a couple dozen anyway....told me
>about it, so I turned off the Shit List long enough to find it.

Just couldn't resist, could you? You claim to killfile someone, then
respond in excruciating detail to that person. It's a time-honored
way to attempt to get in the last word in an argument that you're
losing. The ONLY way that a killfile is effective is to use it
consistently, WITHOUT announcing the fact that you're doing so.
Announcing it is just another "one-up-manship" ploy.

>I am good in all areas, Mackey, and I do not lie. Not ever. And I
>don't "grandstand". And I am not arrogant.

Those are strong and absolute statements, Cheek, and the evidence
suggests that they are not entirely accurate.

>I like decent people, and
>treat them on the same level as I am treated. As for assholes, well,
>hey, whaddya expect? Speaking of which......how you been doing?

Still indulging in the same old insults and namecalling, I see.

>I don't give a flying road apple what your issue is with me. Why do
>you think I care?

Because you keep responding ad nauseam when he pushes your buttons, of
course. This latest screed is proof enough that you care a lot.

>No, Mackey. I deal in nothihg but total truth.

Another absolute statement that doesn't hold up well to scrutiny.
Depending on how you interpret "truth", I suppose.

>THAT is a personal problem. Can't help you with that. You shoulda
>oughta been more attentive and respectful from the git-go.
^^^^^^^^^^
There's the key word right there, folks. Cheek wants respect.
Unfortunately, respect must be EARNED, Bill. It cannot be commanded,
no matter how much power you have. In FIDO, you have ultimate power.
Here, you have none. Either place, you cannot command respect, and

attempts to command it only subject you to scorn.

>Bullshit. THAT never happened, you lying sack of filet de offal.

More insults and namecalling.

>>the way you flaunt them invites controversy. We now know you
>>are not current with your Mensa membership.

>Not current, no. But qualified, yes, and a past member, yes.
>THAT counts. Counts BIG TIME. <giggle>

Only to yourself. Nobody else cares.

>As me if I give a shit what you think. <giggle>

Your continued tirades suggest that you do "give a shit."

>ain't up to a urinary ant. Why do you think I am interested in
>confirming ANYTHING to you? Who ARE you to whom anything needs to be
>"confirmed"?

Perhaps because you can't confirm them? Why would you continue to
flaunt your qualifications, and yet refuse to allow others to validate
them? Surely you can see how this makes you look like a braggart or a
charlatan?

>know why you blink so much. Heh heh heh heh heh.....a man with
>foreskin grafted on for eyelids has good reason to blink, eh?

More insults.

>You NEED support, Mackey. One only wonders about the caliber of those
>who support your sorry ass. I don't want any part of 'em.

One could wonder as well about the caliber of those who support you,
Bill. Do you denounce those supporters as well? Or do you enjoy
having folks kissing your... ah, ring?

>No, I offered you one.... and you continued the crap..... so stick it
>up your grump stump. I found the best truce of all.....my Shit List.

Evidently it needs more work.

><giggle>
^^^^^^
These little asides are quite revealing.

>truce. When I put you back on my Shit List, you're good as gone.

Wrong, as this lengthy post illustrates quite clearly.

><snicker>
^^^^^^^
More of the ridicule and condescension that's typical of your style.

>> You may respond if you like, but you don't have to.

>I know.

But it's clear that you DO "have to," isn't it? You evidently aren't man enough to let something drop completely without getting in the last word.

>best ol' Shit List in the whole wide world. I click your name and
>you're gone, kid. You can blow and go all you want and I'll be
>oblivious to it all.

You keep saying that as if we'll believe it if you keep repeating it. Actions speak louder than words, Bill.

>Anyway, go find someone else to snivel and whine to. Sounds like you
>and that Quarnstrom doode are two peas in a pod, joined at the hip,

Nope, I have no interest in this feud between you and Mackey. I haven't jumped into that fight. I did post one message about coax cable deterioration that happened to support YOUR side of the issue, but don't try to drag me into your personal fights, because I ain't playing that game.

>sort of. So go snivel to him and tell 'im about how that bad ol'
>Billy Cheek done popped you up side the chops with his thingamabob
>again. He will pat you on your poopy and help you blow your nose and
>assure you of what a fine lad you are.

More snide insults designed to draw heated retorts, so that you can play the victim and pretend that the "other guy" is the attacker.

>And you can assure him of what a fine specimen he is and then you and
>him can hug, kiss, and play some serious tonsil hockey together....or
>something.............

Still more of the same puerile instigation tactics.

>Anyhow.....reach out and push the button on my Give-a-shit Meter and
>see what it reads, Johnny Mackey. The needle won't get off Zero. :-)

The evidence suggests otherwise, Mr. Cheek.

>See ya, kid.....you're gone.

Any bets, folks?

><giggling uncontrollably>

Another revealing comment.

>Bill Cheek
>Master Grandstander and Arrogant SOB, Ph.D.

Well, you did say that you dealt in nothing but total truth.

Ken,
WFM mode will give you the ability to monitor television station audio and FM music stations, assuming your scanner covers said bands. May be some military in wide mode between 200-400 Mhz but not sure about that.
Mark

I've been looking at specs for some scanners, and have noticed some have a feature called FM Wide. Can anyone tell me what the purpose of this is?

Thanks.

FM-wide mode will allow you to pick up standard FM broadcast band signals (assuming of course that your scanner covers 88-108 mhz). I dont know of any other broadcasts using this mode. Maybe some television or radio remotes for reporters etc.

I have seen similar situations where the cure was to put a couple of
2x4s or metal braces across the edge of the overhang and attach the
standard antenna mounts to them. It should work as long as it's sturdy
enough.Good Luck.

From: bigtommy@ix.netcom.com
Message-ID: <3265B464.4804@ix.netcom.com>
Source record: 220120

Okay, this is probably flame-bait, but I'd thought I would ask this before buying a new/used $200+ scanner...

Is there any 'hope' for a lowly Uniden Bearcat BC60XLT-1?

I am not asking for a cell mod or a 512+ expansion (which is my scanner's limit), but is there any hope for adding more channels, or adding a few bands that might be reachable in your scanner but not in mine?

If not, oh well, that '3000 sounds good, only if I could find a decent place to buy it in the Chicagoland area...

Any bit o help is appreciated...

Tom
bigtommy@ix.netcom.com

P.S. If you haven't figured it out, I am new to this...

1437. Bearcat 760 XLT-Z ???

Newsgroup: rec.radio.scanner

Hello everyone,

I am interested in getting a scanner to use in my car. I was informed that the Bearcat 760 XLT-Z was a very good radio. That it is used by law enforcement and other agencies. I would like to know what people who have the radio think about it. I am going to either get a scanner like this or wait for the Beartrunker when it comes out since my community is on 800 Mhz Motorola trunkings.

Why don't Mackey respond to questions he crys about Cheek not
answering? He make all sort of claims but can't back it up. Is it
IMackey can't back claims. Must be. He claim he maintains a system
but don't name it. He claim all sort of credentials but can't back it.
I guess Cheek does control IMackey.

Blake Bower suggested that they both send their certificates, proof of employment,
proof of training, etc to a neutral third party for verification.
All sudden the Idiot Mackey is silent about this. He talks big but run when
faced with idea his lies will be exposed. For all the post Imackey makes
he sure can't show any facts of what he says. Idiot Mackey just Usenet
troll that has no life, that he has showed us.

Run girly Idiot Mackey run. You a real chicken. I won't post no more about
Idiot Mackey for you people on heres sake except for IMackey to prove his
claims. Probably be good we all do it.

Larry Wilson
Waiting for Imackey to show his credentials
Long waiting for liar who can't show goods.

A previous poster had claimed to have checked with the national Mensa office regarding whether or not Bill Cheek was a member. According to Teresa at the national office (American Mensa, Ltd., 201 Main Street, Suite 1101, Fort Worth, TX 76102, 817.332.2600) Bill is not a current member. However, she was not allowed to say if he was a _lapsed_ member. From Mensa's point of view, if a person has qualified once, he is qualified for life. The paying of dues becomes a trival matter. Bill has never said if he was a current or lapsed member, only that he was a member. With the above in mind, that is a truthful statement. Anything else is conjecture.

A few days ago you suggested that I was very new to this news group. Not really, but you'll never know for sure. That's the beauty of Usenet. You never know if someone has been visiting the news group for five minutes or five years and lurking a lot. When someone accuses another of being new to the group, invariably the accuser is the new person, not the accusee.

You also said I was a Fool. Well, I am so pleased, you can't imagine.

Thank you ever so much for naming me a fellow Fool. Receiving this title is a great honor in itself, but coming from none other that the Supreme Grand Master Fool of the Universe himself. WOW! You have no idea what it means to me personally or how much this has affected my life.

David Letterman's office has called twice. He even called himself a third time. He wants me to help him deliver the Top Ten list, 'You know you're with a professional Fool when...' Ted Turner called wanting an interview for CNN, said something about beating Rupert Murdoch to the punch. Rosie O'Donnell called, wants me on her show. She said she had a baby sitter for all night and we could hang out together in her dressing room after taping the show if I wanted to. My father saw the announcement on the wire services in Europe. He told Yeltsin get another heart bypass surgeon because he was going to the United States for the awards banquet. The Pope sends his blessing and but said I should get to Mass more often. The White House called and said congratulations. Bill is a little mad at you though. He said you promised him the award this year. He also said that maybe I could replace Gore and if that thing with Rosie O'Donnell worked out, Hillary wanted us to come to a tea party in the Rose Garden. I've had nine marriage proposals so far. You should see the photos some of these women have sent me. They prove beyond any doubt there are some incredibly beautiful women in the world :-). All those hours in the gym has paid off for some of them. Tia Carrere called, said if that thing with Rosie didn't work out, give her a call. She had a couple of special tricks with M & M candies that she wanted to show me. Ross Perot said if I didn't take Gore's place, he'd like to talk to me. Said he needed all the Fools he could find. Said he'd be giving you a call, too.

You can't imagine the press corp. My lawn is a wreck with all the photographers and news cameramen trapsing around and dragging their equipment all over it. By the way, do you know how to get cigarette butts out of a sprinkler system? I forgot to turn off the timer and the press people got a little wet during the night. The neighbors have made a small fortune charging them for parking space near my house. My local police department is a little concerned though. The crowds are getting out of hand, and they don't know if they can spare enough officers for crowd control and still patrol the city properly. The mayor told them to use all the people they needed because he didn't want me upset or anything because he wanted me to be Grand Marshall in an upcoming parade. It's also an election year for him, I think. I went to the bathroom and two guys from BBC were hiding in the shower hoping for an interview. The were mad because the toilet sounded wrong when it flushed. The sound man said he might have a couple of tracks left over from Benny Hill that he could dub in. Howard Stern sent Stuttering John over. He wanted to know if I was a boxer or a briefs man. He also wanted to know if I'd give him Rosie O'Donnell's home phone number. National Enquirer called offering to buy any pictures of Rosie that I might have.

All in all, I want to thank you for elevating my station in life. This is the highest honor a sentient being like myself can ever receive. I am eternally grateful.

Run a search through Deja News (www.dejanews.com) with the name xplorer.
Make sure you do a power search and search only the rec.radio.* groups.
YOu will find several messages with the cell unblock code.

Tom

to the IDIOT OF MACKEY.....

say what?

he (idiot of mackey) gets off on replies, no matter the subject
or the inference. He lives for replies...orgasmic in scope. He
needs your rejection and despisement and lucidity about his
lineage living under a rock deep in the pig pen feeding/swilling
area.

there is a saying in gestalt which I got from EST....

"what you resist...persists". AS long as we continue to resist
this aberrancy, he will continue. If we just refer him to go to
alt.angst...then we allow him no more fodder.

For my part...the IDIOT OF MACKEY is off my lines to read. I
will use the KILLFILE option. His posts are boring and rather
child-like in tone and reach. He has no point of view and he
keeps his name before us because we think he listens to reason.

Enter the IDIOT OF MACKEY into your killfile or allow him to
speak to himself from this point forward. There is nothing he
has to say that he is worthy of the body politic here. He is
a permanent "left-field". He's a redundant "never been".

Quit giving this lunacy space. Once you do this you give him
reason to continue his ACT. KILLFILE him or ignore him. That
will make him "a legend in his own mind"......

bill conduit
etc.

1452. Bearcat 860 Model?

Newsgroup: rec.radio.scanner

From: sonyal@crosslink.net
Message-ID: <5419fmhpn1@kronos.crosslink.net>
Source record: 220181

I just ran across a Bearcat 860 at a clearance price of 159.99 on mylunch hour today! It sounds almost too good to be true. Can anyone tell me what the difference is between this model and the 890 that I am somewhat familiar with. This 860 seems to be very similar to the 890 and appears to have full coverage (29 - 956 less cellular) Can it be moded? Is it being discontinued?

I'd be interested in anything anyone could tell me about this model. Looks like I'll never get my hands on that old elusive Pro 2006 -- so at the low price of $159 I could finally upgrade my trusty Pro 37 handheld and get that base station I've always wanted ;-)

TIA

1454. Ken Winters' D/FW Frequency List -- is it available in a text file?

Newsgroup: rec.radio.scanner
Date: 1996-10-16 00:00:00 UTC
From: twhite@digitrix.com
Message-ID: <541hqa$q7h@newshost.cyberramp.net>
Source record: 220183

I've seen several copies of Ken Winters' _D/FW Frequency List_ in several locations around the area. I notice, though, that the publisher is "Basic Computer Services" or something like that -- and on the last page of the list there is handwritten (and copied into the book) the following statement: "For updates on all frequencies connect to the Cowtown BBS at 817-xxx-xxxx."

What I want to know is -- is the entire list available as a textfile? I prefer not to have the printed material, and the ability to print out only what I want to use.

If not, does Ken Winters have an email address?

The only problem you'll run into is that the crews (and I was on a Carnival Cruise, also) rarely speak English. Lots of Asians, Latinos, etc.

For ship-to-shore telephone stuff, you'll need a SW radio. I bought one while we were on our honeymoon, but the ship puts out so much interference, it wasn't much good. INMARSAT is a little more complicated. About the only marine band VHF stuff I heard was around San Juan, and it was mostly US Coast Guard. And I was too busy with other stuff anyway.

I didn't worry about leaving it in the room, (there's a safe you can use in the stateroom) but if we ever take another cruise, I'll leave the radio behind.

By the way, the radio room on the ship is (sort of) open to the public. You can go up there to place phone calls, or just hang around and watch the operator work (which is what I did one night). Don't miss the tour of the bridge, either. You'd be suprised at how little there is up there. The big ships practically run themselves. They handed out little technical sheets that listed all the gizmos, the shipyards where it was built, etc.

Have a good trip! And watch out for the nickel slots!

>divulge what you
>hear on those bands.

This is not correct. Cordless phones are not legal to
monitor in the USA. Check this page for details:

http://www.frontiernet.net/~dstark/scanlaws.html

>1) Where are those laws in the Code? and what is their
>exact wording?

Pretty long to post here. They are in Title 18 of the
United States Code, Sections 2510 through 2520 (ECPA)
amended in 1994 to add cordless phones to the "prohibited"
list, Title 47 Section 705 (Privacy Act), Sections 2, 15 and
302 of the Communications Act (various technical provisions
regarding certification, manufacture and import of scanners
capable of violating ECPA).

>2) What if you hear a neighbor talking on his portable
>phone, bragging to friends or girlfriends about such
>illegal things as

You might report such things to the police, but for them to
be able to listen in, they will have to get a judge to sign
a wiretap order, then hear the same kinds of calls, identify
the speaker, etc, etc.

>3) Are those things legal to report to the POLICE, if not
>the public? or
>would it be ruled out as evidence due to a technicality?

Technically, it is not legal for you to monitor, so you
would be committing a crime and admitting it to the police
by reporting these conversations. They MIGHT be able to use
your testimony in court, but they can't listen in without a
court order.

If they're smart, the police will advise you to cease and desist and will not attempt to use the information you reported to them in any investigation or prosecution. However, if they decide that there is probable cause, they may ask a judge for a wiretap order and gather their own evidence. You still run the risk of being arrested yourself.

Reporting it to anyone else also violates the same laws.

Depending on a judge's interpretation of the law with respect to defenses of justification, you MIGHT be able to avoid conviction (or at least have your sentence reduced) if you claim that the crimes solved or prevented due to your illegal monitoring are more severe than the crime you committed by monitoring the calls.

If you are hearing what you believe to be illegal activities being discussed during the course of your own illegal monitoring of someone's phone calls, then you should retain an attorney before reporting anything to anyone.

>4) And what would happen if someone warned a neighbor that
>I am monitoring
>to give him fair warning, and as a last ditch, no other
>way, effort to get
>him to stop harrassing and the like.

Your neighbor could complain to the FBI and possibly have you arrested and your scanners confiscated for violating the Federal wiretap and privacy statutes.

Under ECPA, he can also sue you in civil court for damages in addition to the criminal complaint.

The short answer - don't try to play "telephone cop".

I am looking for a Bearcat BC-8500 Service manual or Schematic.
Would like to see if it's possible to unblock the 800 MHz band
(if I can't find one). Not interested in the virtual mod
that displays the blocked out part of the band in the 300 MHz
area.

Looking for Cellular mods (diode type, not virtual downconversion).
I have checked several mod sites on the internet with know luck.
It should have a diode mod because it was made before 1994 and all
other Bearcat 800 MHz scanners made before 1994 have diode/wire cut
mods including 200, 205, 600, 700, 760, 855, 890, and 2500.
BTW- I have seen these mods posted earlier but I don't have them myself.

Looking for Keypad Tricks like BC-3000 or BC-9000 radios have.

Would like any technical info on this radio. Any Bearcat hardware
hackers out there?

The laws are different from state to state. If you live in California
there is an online law library that lists all of the law codes for
California. Check my web page for the web address.

Since it's illegal to pass on information gained through monitoring
these
freqs (assuming it is in your area) then your breaking the law if you do
so.
Then again .. it's illegal to carry a concealed weapon, but I know
several
people who do so anyway because if it saves your life it's worth paying
the
penalty for breaking that law. If your neighbor is breaking the law,
you
always have the option of informing the authoritys anonomously (sp?).

Late one night several years ago, I carried on a conversation with 2
sidebanders in Eastern Oregon. I live in Central California, several
hundred miles away, and at first thought that they were local. I just
figured that it was some kind of short skip or something.

With regard to the UBC-9000XLT.

Yes. No.

As accurate as it can be:

UBC-9000XLT has 25-550MHz and 760-1300MHz, there are no "gaps" other than
760-1300MHz.

Other than this and the unfortunate fact that the UBC-9000XLT is more
expensive than then the US BC-9000XLT they are the same.

Although it is technically illegal to monitor cellular and cordless phones,
the laws are federal laws (except in the case of California) and those laws
cannot be enforced by local law enforcement agencies. Local law enforcement
agencies may use information given to them by a third part, even if the
information is obtained through illegal means.

Brian

Several folks on this group have asked a question about overhearing mention of illegal activity while (illegally) monitoring the cellular band. Now, I am not a lawyer but I do have a BS degree in Criminal Justice and I know a little about the law. When I first read this question, I remembered back to my college days and having read a section in one of my case law books. Also, let me point out that this book is copyright is 1975 and the case involved was in 1921. So, things may have changed, but I doubt they have.

The following was taken from: "The Law Of Arrest, Search & Seizure." written by J. Shane Creamer.

"If a private person steals or illegally seizes incriminating evidence from someone and turns it over to the police, that evidence is admissible against the accused so long as the police did not in any way participate in the illegal seizure of the evidence. Burdeau vs. McDowell, 256 U.S. 465 (1921). Citizens, private detectives, store detectives, security guards, and all other persons who are not connected with any official agency of government are not under the strictures of the Fourth Amendment because the Supreme Court of the U.S. has indicated that this amendment protects the citizen from illegal conduct by government officials only. If a citizen is wronged by another private citizen , his remedy is to sue civilly."

>of the VHF-Lo band was blocked to comply with euro regulations, this
>would be unacceptable if it's true. Does either perform better? Which
>should I get? Accurate and reliable feedback is appreciated...

Well both radios have their advantages. This is what I can
recall from memory:

PRO-2006 advantages:

Easy cellular restore.
Computer control boards available
Many modifications available

BC9000 advantages:

Scans very fast (100 ch/s vs approx. 30 ch/s for PRO-2006)
More memory channels (500 vs 400)
More memory banks (20 vs 10)
Alfanumeric tags
Optional CTCSS board (possible on PRO-2006 with computer interface)

Since I have no practical experience with the BC9000 myself, I cannot
comment on the RF performance. I do however own a UBC3000 which
in many ways is operated like the BC9000 and I must say that I
perfer the UBC3000 to the PRO-2006 considering operation. I do
however miss the possibility to store 10 search ranges, which is
a very nice feature on PRO-2006.

As for the European version (UBC9000XLT) this has full coverage,
except for the UHF TV band also missing on PRO-2006. There are no
general European regulations demanding exclusion of certain bands.

Regards
Per

Hi,

> I'm looking for some COMMTEL215-modifications
> The commtel 215 looks like a UNIDEN-UBC serie-model
> Can anyone help me?

The Commtel 215 is the same receiver as the Uniden Bearcat 890XLT. It is
also the same (for the sake of argument) as the PRO-2036 from Realistic.

The only frequency modification you can probbaly do is give it the 29-54MHz
coverage that was on the BC-890XLT rather than the 66-88MHz for the European
models.

I haven't seen any references to other modifications although you will quite
often see threads relating to the 890XLT and PRO-2036 so keep an eye open
for those.

Hope this helps.

Maybe your sister doesn't like you John :) Seriously though, I think
that Bill Watts is pretty much right on with his understanding of the
law. If he's willing to settle for an apology from you, it might be a
prudent move on your part to give him one. The women and children
should be considred noncombatants unless they are shooting at you too.
I think your comment was a little out of line, be a man and say you're
sorry.

We visited Busch Gardens (Williamsburg, VA) over Columbus Day weekend. I had planned on listening to the new 800mHz trunked freqs that were listed in Scanner Master. I fired the radio up in the Busch Garden's parking lot anticipating some chatter and the jackhhammer sound of a data channel and what da ya know, most comms were encrypted. They were scrambled much like the Norfolk Police stakeout comms (less the ping at the end of the transmission).
Interesting, huh.

You could always tape-record the call and anonymously send the tape to the cops. I heard on the news this morning that a prominent Dallas school board official was being tried for some crime he admitted to on a cordless phone conversation, and the tape was being used as evidence. I don't believe the person who made the tape was ever identified, he had previously sent it to other school board members anonymously.

Also, people might want to consider that if they eavesdrop on private conversations, that they might get put into an uncomfortable situation like this. It might be better for some people not to know, and avoid the situation altogether by listening to other things on their scanner than phone calls.

>they were supportive & interested.

You NEED support, Mackey. One only wonders about the caliber of those
who support your sorry ass. I don't want any part of 'em.

>On THREE seperate occasions since July you have been offered a
>truce & you only continued your attacks.

No, I offered you one.... and you continued the crap..... so stick it
up your grump stump. I found the best truce of all.....my Shit List.

<giggle>

>I would like to offer you a truce again.

Don't bother. Just do as you please. Yur money ain't any good and
your truces are worthless. But like I said, I got me a real good
truce. When I put you back on my Shit List, you're good as gone.

<snicker>

> You may respond if you like, but you don't have to.

I know.

>Your actions online will clearly indicate
>wether you chose the truce or not.

Just shaddup and don't say anything to or about me. And you'll get
the same from me. Well, you'll get it anyway on account of I got the
best ol' Shit List in the whole wide world. I click your name and
you're gone, kid. You can blow and go all you want and I'll be
oblivious to it all.

<chuckle>

>BTW- myself & the others have a long memory, so this is for good not
>just a couple weeks. If you go back on it then the truce is off.

Your memory ain't nearly as long as my..... 'er, never mind. I'd
just beat you over the head with it and you'd whine some more.

Anyway, go find someone else to snivel and whine to. Sounds like you
and that Quarnstrom doode are two peas in a pod, joined at the hip,
sort of. So go snivel to him and tell 'im about how that bad ol'
Billy Cheek done popped you up side the chops with his thingamabob
again. He will pat you on your poopy and help you blow your nose and
assure you of what a fine lad you are.

And you can assure him of what a fine specimen he is and then you and him can hug, kiss, and play some serious tonsil hockey together....or something.....

Anyhow.....reach out and push the button on my Give-a-shit Meter and see what it reads, Johnny Mackey. The needle won't get off Zero. :-)

See ya, kid.....you're gone.

<giggling uncontrollably>

New comer, mayby, but not that new John.

Obviously, I had to do a lot of "catch-up" reading here, but I did
catalog a fair number of posts and you have 1/5 of them over a 2 month
period of time. The numbers speak for themselves.

Anything you have to add contrary to the real facts in this case only
serve to prove that you are in denial, John.

I saw an ad in October's MT for a fellow that is selling aircraft blade antennas for the 225-440 range. I am really interested in one of these and was wondering if anyone on the list has purchased one, how best to mount, and general comments. Also would like e-mail address of this fellow if anyone has one. His name is Don....

Thanks very much..

I once went in a Cutis Mathis store and saw my Panasonic VCR with a Curtis Mathis label on it. I told the salesman that C-M must buy VCRs from Panasonic as none are made/assembled in the US. He said "No way, we make these in Texas and sell them to the Japanese for them to market under the Panasonic name". I was ROFLMAO!!!!!!

: > Can someone explain CTCSS to me, if a scanner can be equipped
: >with one, what changes will be seen?
:
: For the two posters who wanted to know about CTCSS tone boards and
: their utility, here's a quick summary:

: When the FCC assigns a common radio channel to two or more
: organizations, they most likely would desire to hear only units from
: their own organization and not the other(s). When they buy an LMR
: (land mobile radio) system, they will be assigned separate "PLs" or
: Private Line [trademark of Motorola] tones. These are sub-audible tones
: that are transmitted along with mic audio. When like units "hear"
: their PL, they open squelch to pass audio. When a unit from the other
: organization keys up, the dissimilar PL causes the audio to remain
: squelched. If you accidently key your radio while the other
: organization is on the air, you normally get a warning tone telling you
: to wait. Some LMRs have a BUSY light for this function. The Continuous
: Tone Coded Squelch System (CTCSS) does not provide ANY encryption or
: privacy. Scanner listeners can hear all conversations. If you have a

It does keep you from hearing all the other traffic on the frequency, so
in that sense it does afford some 'privacy' by filtering out uneccessary
chatter.

If you can carry a tune, you can hum at the right frequency and open the
squelch. :)

: scanner with a tone board, you can filter out different organizations
: on the same channel. In my case, I like CTCSS for GMRS (General Mobile
: Radio System) in the 462.55 to 462.725 band. When the local high
: school coach uses 462.575 for field-to-booth comms, I can filter him
: out and listen for only a special coded transmission from other GMRS
: users using 123.0 Hz CTCSS.

: Sorry for the dissertation (I get carried away sometimes)

i.e. >225-400Mhz.
>--
>Jeff C.

There is a function on several military UHF radios for FM and WBFM in the 225-400 MHz range (EC-135/E-3/E-4/etc). Firstly, 99% of clear voice military aviation comms in this band are in the narrowband AM mode. Secure voice comms are in the wideband or narrowband AM mode. NBFM mode was rarely used operationally and may have originated in order to have interoperability with federal (ground) agencies operating in the 380-400 MHz range. WBFM usually enabled a separate 70 MHz IF input line to the radio which was fed from external modem equipment (i.e. SATCOM or FDM mux). So, back to the original question, the previous posts about WFM for broadcast and TV audio reception seem to be on target. You really don't have a need for it in the 225-400 MHz band.

==========

It may be possible to install a CPU for a PRO-2006 into a PRO-2004, despite that the 2004's is a 64-pin DIP chip while the 2006's is a 72-pin surface mount (SMT) chip. I have compared pin function of both chips and they are identical. The functions of the Logic/CPU boards are alike.

As a matter of fact, the PRO-2006 CPU can be installed in place of the one in a PRO-2005 along with swap resonators and rearrange the diode matrix, and a 2005 becomes a 2006. I know this to work because I have done it.

It appears to me that a CPU swap, a clock resonator swap, and a rearrrangement of the diode matrix in the PRO-2004 can being it up to PRO-2006 specs, too. The below information is presented for those who might want to attempt such a project.

The procedure would involve removing the 2004's CPU; install a 64-pin DIP socket in its place. Install the 2006 CPU onto some sort of a header or mini-PCB, and then wire it to a 64-pin DIP header that can plug into the aforementioned socket.

Next, the 7.37 MHz ceramic resonator (CX-501) in the 2004 would be replaced with a 12 MHz version from a PRO-2006. Finally, the 2004's diode matrix would need to be rearranged to match that of the 2006, basically just adding and moving some diodes around. These three efforts should make the 2004 run like a 2006.

====================================+====================================
Summary: 72-pin CPU with 10 unused | Summary: 64-pin CPU with 3 unused
(NC) pins and two ground pins for a | (NC) pins and one ground pin for a
total of 60 active pins. | total of 60 active pins.
====================================+====================================
```

General summary: The 60 active functions of the PRO-2006 CPU are identical to the 60 active functions of the PRO-2004. Therefore, it is possible that the PRO-2006 CPU can be used to replace the CPU in the PRO-2004.

This alone would be of no advantage, but if the 7.37 MHz resonator, CX-501, in the PRO-2004 were exchanged with a 12 MHz version from the PRO-2006, then the resultant 30-cps scan speed might make the effort worthwhile.

This is especially true for early PRO-2004's with the GRE-0327 CPU (the GRE-0327A is in newer models). This early CPU's firmware did not account for the expanded cellular mobile telephone bands, hence the default 30 kHz STEP works only between 870-890 MHz and 825-845 MHz in early model PRO-2004's.

The later GRE-0327A CPU's firmware contains the expanded bands: 869-894 MHz and 824-849 MHz with the 30 kHz STEP being default for this wider range.

In a word, it appears there are no functional firmware or pin-function differences between CPU's of the PRO-2004 and PRO-2006, hence it could be advantageous to install a 2006 CPU in a PRO-2004, though the job will definitely be easier said than done.

The PRO-2006 CPU can be obtained as a repair part from Tandy National Parts at (800) 442-2425 as: Circuit symbol IC-501, p/n GRE-0918. The 12 MHz clock resonator is available as circuit symbol CX-501, p/n CST12.0MT. Use standard 1N4148 or 1N914 switching diodes as needed. The 64-pin DIP socket is a special one with pins at .07" on centers; DigiKey p/n ED22647-ND or Mill-Max p/n 117-93-764-41-005, and you will need two; one for the board and one to plug into the one on the board. I really don't know of a suitable header to interface the 2006 CPU to the DIP configuration, though. I'll leave that up to the hacker's initiative and ingenuity, and will entertain suggestions and ideas for a best possible approach.

I think having the ability to listen to cellular, not whether
or not you choose to is the issue. This is just another example
of buisiness and government trying to dictate what the people
can and can't do. And the people involved (current and potential
scanner listeners) unconcsiously rebelling by wanting and buying
scanners that can somehow receive cellular....BILL

I had heard that if the RS scanner was made in Japan, it comes from GRE
as a RS OEM. Otherwise, its a Uniden.

1501. Cause of "chuffing" sound

Newsgroup: rec.radio.scanner
Date: 1996-10-17 00:00:00 UTC
From: Jerry Stack <jps@pacbell.net>
Message-ID: <3266F577.1F5C@pacbell.net>
Source record: 219980

In listening to the local L.A. Co. Sherriff's frequency, I have noticed a kind of "chuffing"sound on transmissions by the dispatcher. It has a regular rhythm. There is no similar sound coming from the mobile units. The frequency is in the 480 mhz range. Other transmissions in this spectrum don't have the strange sound.

I've noticed this on several scanners. Anyone have an idea what causes this?

: then realize that it was for a different phone.

Mine rings for a second or so every now and then, and I assume that my
phone is getting temporarily confused by the signal from a neighbor's.
I've learned not to answer it until I hear the "land-line" phone ring.

: > It's legal to monitor the 44 to 49 MHz freqs as far as I am aware. HAS

: No, no, no, a thousand times NO. It is NOT LEGAL TO MONITOR
: ANY MOBILE OR PORTABLE TELEPHONE CALLS IN THE UNITED
: STATES!!! Cordless and cellular are both covered by ECPA
: (Title 18 Sections 2510-2520 inclusive of the United States
: Code) as of 1994. Get it straight. READ the statute, for
: cryin' out loud. It's all there in black and white.

In Canada, Our radio-communication act says we can listening to anything, but there is a privacy provision. We cannot share what we hear unless it's a broadcast station or amateur radio. Cellular and cordless are legal to monitor here. We just can't tell people what we hear. If you hear something unlawful, you can tell the police and they will follow up, without the threat of prosecution, unlike the yankee ECPA act.

1510. BC-3000 Baseband Audio

Newsgroup: rec.radio.scanner
Date: 1996-10-17 00:00:00 UTC
From: mikenet@access.usa.net
Message-ID: <546ujh$oes@earth.usa.net>
Source record: 219989

I am looking for detailed instructions on how to get the Baseband audio from a Uniden BC-3000XLT scanner. I am playing around with POCSAG software and the output from the headphone jack doesn't work very well.

From what I've read in this NG I believe I want to take the baseband from pin 12 of IC202. I've looked at the chip and there is no way I can solder a wire to a pin that small. Is there another point I can connect to? Do I connect directly or through a capacitor?

If you have done this please let me know how?

Thanks

Mike

>course caller ID is not activated.
>Any ideas what could be going on?=20

I thought I was going crazy at one point. When I lived in Portola Valley
my Sony cordless would ring almost to the minute at 12:00am every night.
I suspected that one of the neighbors had a cordless and had a regular
caller and my phone would pick up the ring transmission for just a second
then realize that it was for a different phone.

...then I bought another cordless phone and the same thing happened.

...then I moved to Redwood City, and the same thing started happening,
but at 10:30pm!

Everyone thought I had gone crazy!

Ken Flanagan wrote:
>
> I've been looking at specs for some scanners, and have noticed some
> have a feature called FM Wide. Can anyone tell me what the purpose of
> this is?

The signal that an FM transmitter sends out is called its carrier.
The basic idea behind FM is that as the loudness of the audio signal
we want to transmit (the voice or song or whatever) varies, the carier
moves.
An unmodulated FM transmitter (one that has silence when you listen to
it) sends out its carrier on its 'carrier frequency', (that is the
frequency that you dial on your receiver to listen to the channel).
The maximum amount that the carrier is allowed to move is refered to
as its 'bandwidth' or as its 'peak deveation'.
There are two 'types' of fm they are narrow and wide, they have to do
with the ratio of 'bandwidth' to 'carrier frequency'.

The reason for the two types has to do with the amount of 'data' that
needs to be sent without distortion, (said another way it depends on
how much distortion you can live with and still have a good signal).

A FM 'wide' station would be for one that is either sending alot of
data very rapidly or needs 'low distortion'. A perfect example is a
stereo fm radio staion, which sends '2' copies of the sound you are
listening to (one for the left channel and one for the right) and they
want that sound to have very little distortion so that it sounds good
when you hear it.

On the other hand a police dispatcher can be understood easily even
when some of the 'sound' of his/her voice is lost completely, kind of
the way that your telephone doesn't transmit your 'true voice'
(reguardless of what AT&T says in its comercials). The Alpha codes the
police use (subsituting a word for a letter) make up for the fact that
with the loss or distortion its tough to tell the difference between
various letters (which is why say B,D, and E are often confused on
the phone).

Your receiver must match the 'wide vs narrow' of the transmitter
otherwise it cannot decode them properly.

Does anyone have the 2 tone decode tones for CALSTAR or for any equipment on Morgan Hill CDF? I live in Palo Alto, CA and picked up a two tone decode capable radio (Yaesu 2070 commercial dual band HT). Thanks.

I wouldn't pay more than $250 for the R1. It's retail price is WAY
steep. It is prone to intermod, overload and generally sucks unless
you want to use it in a remote and desolate place. It's ONLY advantage
is that it is very small. I am surprised that you found this
particular unit to not be very sensitive. It's known to be pretty
sensitive.

Oh let me take a stab at answering that. What are people doing with baby monitors? Oh my guess would be that they are monitoring babies. But I don't speak as an authority on the matter since I don't have any kids.

Trying to compare a legal use of the band to eavesdropping is pretty silly.

1538. Re: WiNRADiO under Windows NT

Newsgroup: rec.radio.scanner
Date: 1996-10-17 00:00:00 UTC
From: bluedot9@aol.com
Message-ID: <545mvs$ee5@newsbf02.news.aol.com>
Source record: 220038

If you can't run WinRadio under Windows NT, then it isn't worth buying (my opinion).

The unit probably has proprietary(keyword) interfaces, which in essence, could violate system integrity (hardware). If the software is shoddy, and capable of violating system integrity (known as GPFs, memory access violations, or application errors) then there may be some problem accessing it .

It just may turn out that the hardware is OK, but the software driver portion (which controls the board) is not capable of accessing the card under NT. Thus, creating the need to call up the manufacturer of WinRadio and tell them you want your MTV (couldn't resist!). Uhh, I meant WINNT drivers to allow the use of their *fine* (hehe) product on your !fine! computer setup.

If they say something to the tune of....well, we don't have any and we probably won't have any until next BLAH BLAH BLAH....or, we don't see the need to provide one for WINNT because there are not very many people using that system--BE ALERT!!! They probably (one or more):

Don't know how to program correctly,
Don't have a WINNT expert on hand,
Don't care,
Won't be around for long (also known as Fly-by-night operations),
Will never have software upgrades (drivers or protocols),
DON'T REALIZE THAT WINDOWS IS MIGRATING (albeit slowly) TO THE NT STANDARD (making their product obsolete roughly after Win9x arrives)!

Ever notice that any product that BEARS the emblem "Microsoft Windows95 Compatible" also must be "Microsoft WindowsNT Compatible?" That's the only way they can get this emblem on their software package.

Now, there is software out there that doesn't have the emblem but are truly Win95 compatible, but are not WINNT compatible, and notice that they do not bear the Win95 comp. *emblem* (if they do, they are in violation). They *can* say that the item will run on it, though.

It sounds like it's a combo of proprietary hardware/software problems(more on the software side)and you'll probably never get it going while it's on loan to you (this sentence was your answer, Bob).

Dave
(Scanner Flatulaire)

Why WINNT? Look at how fast the net has grown since the last five years. In five years, your computer will be able to handle more of the tasks that

your ISP is doing now. Security is a big issue. WINNT passes many standards of system security, plus it has the services readily available. Plus, it's failsafe...it takes a lot to crash the WINNT systems. Oh, sure your 16-bit programs will crash now-and-then, but that's because of poor programming. This system makes you realize how much (or little!) time was put into certain high end applications!!

>Thank you very much for your help.

Most SW-specific radio's will outperform the AR8000 on the SW bands. You compromise a bit on performance with a smaller package. However, I have connected a longwire antenna to the AR8000 and have had quite respectable shortwave reception. Any rubber duck antenna is going to suck as far as SW reception, so go for the wire, or dipole/balun if you are really serious.

That having been said, the AR8000 does have true carrier reinsertion for USB and LSB. Also has CW and AM modes. It's not as convenient to do "spin the knob" manual tuning, but as far as dialing in a frequency or simply searching automatically thru the SW bands it does a pretty good job. I have devoted a bank in my AR8000 to just SW frequencies, such as VOA, BBC, WWV, etc.

Fun stuff.

: I understand that they are testing a new 900mhz system. This could be
: what they are talking about. Gary

Actually, in this case they were refering to 460.375 --- but a new 900MHz system would explain the unit I saw a week or so ago with two 800MHz-style antennas (my guess was that one was for cellular and the other was on the CalTrans 800MHz system). Do you have any other information on this (new 900MHz) system?

The CHP does have some allocations around 950 MHz (and 75 MHz) for linking to remote tx/rx sites, but I suspect that that's not what you're talking about ---

Thanks...

Hi,

Does anyone have the ICOM CI-V Computer Command Manual documenting the commands to control the R-7000 series communications receiver? I am specifically looking for the sample BASIC program that is included in the manual that performs the control of the radio. When I called ICOM, they stated that this program was not in the Manual. However I spoke to several other sources that said it was in the ICOM manual. ICOM may have taken it out of the new version of the manual.

Any help would be greately appreciated!

Joe Cardani

So what your saying is, despite it being an "ICOM" and having full coverage
from 1 MHz to 1.3 GHz, it is still a piece of trash? Where else can you get
a scanner that has that wide of a freq. range for under $500? Don't get me
wrong, I'm not defending the ICOM, it's just that it seems that for all it
does, it would be worth the money!
By the way, what do you mean "intermod" and "overload"? I'm not to familiar
with the terms. Thanks though for the feedback!

CTCSS is a standard Tone-Coded Squelch System that uses sub-audible tones to open the squelch instead of just the presence of an RF carrier. Motorola called theirs PL (Private Line) , GE called theirs CG (Channel Guard), I think RCA called theirs QC (Quiet Channel), and their are other "brand" names for the same thing.

Most people just call it "PL" or "sub-audible". This allows you to listen to a busy channel, but only hear transmissions that contain the appropriate tone (there are 32 to 48 "standard" tones, most below 250Hz). When it is turned off, you hear everything as normal.

In my manual and on the back of the scanner it says it receives frequencies .5-1300 MHz but I can get it to tune down to .1 MHz. Is this the same for anybody else? Does anyone know why this is?

First, it's AL Sharpton and I HAVE met him. Typically, it was because I
was monitoring a protest at the state capital in Albany, NY. And when
the cameras are not turned on and he talks one-on-one with people, he's
actually quite nice.

In San Diego, the CHP is now on a repeaterized system. The area that
had Orange is now on Orange-1 39.40 , Gold is now on Gold-1 39.60, Tan
is now on Tan-1 39.80. The inputs are still on the same frequencies,
just new CTCSS codes. FSP for San Diego is on 937.350 Mhz sharing with
other business band users. I have been monitoring ever since they
switched over.

~~~~~~~~~~~~~~~~~~~~~~~~~~~
CAMPAIGN NEWS
FOR IMMEDIATE RELEASE: October 17, 1996

It was right-wing versus left-wing Big Government
in second presidential debate, says Harry Browne

WASHINGTON, DC -- The right-wing branch of the Big
Government Party had its final debate confrontation with
the left-wing branch of the Big Government Party last
night -- and now voters should take the advice of
President Clinton, said Libertarian presidential candidate
Harry Browne.

"Clinton encouraged voters to remember that there
is a 'big difference' between the presidential candidates
this year, and that their vote will help decide the future
direction of government," said Browne. "For once, Clinton
was right -- but not if you waste your vote on Clinton or
Dole.

"As this second presidential debate proved, there
is no real difference between the Republicans -- the
right-wing branch of the Big Government Party, and the
Democrats -- the left-wing branch," he said.
~~~~~~~~~~~~~~~~~~~~~~~~~~~

The mirror-image similarities between Clinton and Dole become obvious, said Browne, when you clear away the smokescreen of minor policy quibbles and ethics charges, and look at the substantive issues discussed in last night's debate.

For example, Browne noted . . .

* "Clinton and Dole agreed to ignore the coming crash of the Medicare system -- and to appoint a so-called non-political commission to figure out how to keep it on life support for a few more years.

* "They agreed to ignore the looming bankruptcy of the Social Security system -- and to appoint another commission to figure out how to keep this Ponzi scheme afloat for another decade.

* "They agreed the government should make sure that individuals don't discriminate against government-designated protected classes -- disagreeing only whether those special classes should consist of disabled people (Dole's preference) or disabled people and gay people (Clinton's choice).

* "They agreed to dole out minuscule tax cuts over the next several years, disagreeing only whether it should be a minor across-the-board cut, or a minor targeted cut.

* "They agreed the government should continue the insane War on Drugs -- disagreeing only whether it should be militarized (Dole's proposal) or whether it should be expanded to include a War on Tobacco (Clinton's preference).

* "They agreed that more money should be spent on the military so we can continue to be the world's policeman -- with Clinton bragging that there was only a 1% difference between his military budget and that of the Republicans."

* "They agreed that government must get much bigger and more expensive -- disagreeing only whether it should grow by 20% (Clinton's number) or 14% (Dole's number) over six years.

The bottom line decision for voters, said Browne, is this: "Pick your favorite brand of Big Government. Like right-wing Big Government? Vote for Dole. Prefer left-wing Big Government? Vote for Clinton.

"Fortunately, however, your only choice is not whether you want Dole's right-wing programs to bust the budget and run your life, or whether you prefer Clinton's left-wing programs to do the same. There is an alternative on all 50 state ballots.

"If you want less government, your only real choice is the Libertarian option," he said. "So, follow Bill Clinton's

advice and make a real difference with your vote this year.
Vote for freedom. Vote for Harry Browne."

1567. 160 mhz handheld scanner recommendations?

Newsgroup: rec.radio.scanner
Date: 1996-10-17 00:00:00 UTC
From: axm11@po.CWRU.Edu
Message-ID: <543v3j$hdi@madeline.INS.CWRU.Edu>
Source record: 220132

I am interested in scanning in the neighborhood of 160 mghz (railroad frequencies). Currently I have an old Radio Shack Pro 36 that has a hard time picking up transmissions that are more than a mile away, even with a variety of recommended antennaes.

Can anyone recommend a scanner that is sensitive in the the 160 mhz range?

Thanks for any info,
Arnie

For the most part it's for listening to broadcast FM in the 88-108 MHz region. There's not much else authorized to use wideband transmission in the regular voice bands.

1572. I need your comments on the ICOM R1

Newsgroup: rec.radio.scanner
Date: 1996-10-17 00:00:00 UTC
From: Javin Press <pbr2@themall.net>
Message-ID: <01bbbbd5$163634e0$927550cc@javin>
Source record: 220137

I know a friend that has the ICOM R1 scanner. He bought it in Europe, so it has continues coverage from 1MHz to 1300 MHz including the 800MHz band.
I have a pro-51 from Radio Shack, and I am very happy with it!
I tried comparing the two by monitoring the same freq. on both the scanners.
My pro-51 would here week signals when the ICOM wouldn't hear anything at all, even with the squelch turned all the way down! Why is that? Is the receiver on my pro-51 more sensitive? I am thinking of buying and ICOM, but before I spend $500 on one, I would like to know what everyone thinks of the ICOM. Is it worth the $500 or so bucks?
Is the receiver on the ICOM a good one? What are the ICOMs shortcomings?
I would appreciate your feedback. You can post a message to this one, or you can
e-mail me at pbr2@themall.net

Thanks in advanceï¿½

Cellular calls are not generally encrypted. That's why we
have a stupid law like ECPA in the first place.

> It's legal to monitor the 44 to 49 MHz freqs as far as I am aware. HAS

No, no, no, a thousand times NO. It is NOT LEGAL TO MONITOR
ANY MOBILE OR PORTABLE TELEPHONE CALLS IN THE UNITED
STATES!!! Cordless and cellular are both covered by ECPA
(Title 18 Sections 2510-2520 inclusive of the United States
Code) as of 1994. Get it straight. READ the statute, for
cryin' out loud. It's all there in black and white.

806 - 823.9375 MHz
- [Unmodifiable 800 Mhz]
851 - 868.9375 MHz
- [Unmodifiable 800 Mhz]
896 - 999.9875 MHz

It has 200 channels divided into 10 banks. With individual
lockout and 2 second rescan delay for every memory channels.
AM and narrow band FM are selectable on any frequency. Plus 10
"monitor" memories that can be written manually during a search.

Scan rate at 25 channels/second and search rate at 50
steps/second. Priority channel is checked every 2 seconds.

Built in light to view in the dark.

REQUIRES 6 AA (Alkaline or NiCd) batteries (NOT included.)

HERE COMES MY HONEST fine PRINTS:

-- The September 1992 issue of Monitoring Times details a
modification to restore cellular phone band coverage and expand
VHF-low band coverage to 30 - 88 MHz. But when I brought it to
the expert radio store to modify the 800 Mhz, they said it's
unmodifiable because it was the latest version.

-- Batteries are NOT included.

:
: >I'd appreciate hearing about any frequencies used at Luke.
:
: Luke AFB can be found at: LAFB PD 173.4875
: 165.0875
: 163.4857
: 164.4875
: OSI Ch1 138.1750
: Ch2 138.0750
: Ch3 138.1850

These are common frequencies used at a majority of the installations
US and some Worldwide... My base shows that these are the freqs for
the SP Squadron, and AFOSI too, but guess what? They aren't... They
upgraded...

Best thing to do is make contact with the Base Frequency Cordinator(sp)
and request a copy of the frequencies used over the base... If you approach
the person NCOIC, in the right way, you should be able to get access to this
information.. If he isn't able to give you the list, find out if there is
an Amateur Radio Club on the base, goto a meeting, get in good with them find
the ones who are scanning enthsiest(Sp) most are/were, they should have an
up-to-date list, just like I do for Keesler AFB, here in Mississippi...

Actually, the "Rampart" everyone has been referring to is the hospital in
the TV show "Emergency." It is actually Harbor-UCLA Med Center...
The Rampart Division of the LAPD is division 2, which would make any car
in the Rampart area 2 Adam 12...etc.

Agreed... scanning the band limits from

895.000 mHz to 915.000 mHz

on mine works extremely well, I was able to hear conversations where
the people in the vehicle would be 2 cities away from my location so
I was apparently picking up the cell-site from the area they were in.

Works well, and right in the middle of the US AMATEUR RADIO BAND..

902~928mHz

In general, most voice comms are in what's called NBFM (Narrow Band
Frequency Modulation). This includes ham comms, police calls, mobile
radio, dispatch, cellular, etc.

Wide FM would be your FM broadcast staions, who use a much wider
bandwidth, which gives room for much higher fidelity than voice grade
communications. Wide FM will let you listen to FM broadcast stations
and TV audio if the scanner covers that range.

It is alleged that Radio Shack makes most of their radios.
Such as the 2000 series radio sets, base models. The big
ones and then the latest not so big ones...but desk only.

It is allged that Uniden Makes the PRO-2000 series , those
that go into the car / desk. The PatrolMan only goes mobile.
These Uniden Make.

Radio Shack be Tandy.

The portables allegedly are Tandy's...the Pro 43's. etc.
That is Radio Shack's parent holding company.

allegedly yours

Well, back when I was in the Air Force, one of the comm systems on our aircraft (EC-135P) used wide band FM, the system was for uplinks/downlinks and used one frequency for each, TX & RX. It could also be encrypted but mostly it was in the clear, I am not sure how it was used in flight as I only listened to it during ground tests. The radio could be tuned in the standard military aircraft frequencies, i.e. 225-400Mhz.

I normally don't post questions until I have done my own searching...

I have found a limited amount of broadcasting on the internet using RealAudio player... What I am looking for is all webpages which contain RA broadcasts featuring two-way broadcasts, either shortwave, or FM signals..

Currently I found a link with 24 hours Dallas/Ft Worth Air Traffic Control

and Voice of America....

I'm looking for pages with public-safety orintated broadcasts, and more utility/shortwave broadcasts... Any information known to you would be very much greatly appricated posted on here... I prefer LIVE broadcasts, but I will be interested in all....

Ehhhnnnnerrr, to be precise about it, sure it is. Legal, that is.

NOW STOP before you reply and read a bit more...

Stripped of all the qualifications and definitions and so on, the laws you're thinking of make it illegal to listen to someone else's cellular or cordless PHONE CALLS. The laws do not mention specific frequencies.

Monitoring the 44 to 49 MHz freqs is not illegal _per se_ until you happen to pick up a telephone conversation, specifically intend to do so, etc. So you can listen to your neighbors' baby monitors, 49 MHz (toy) handy-talkies and headset-talkies, etc., etc., all you want.

>used to "sync up" the 38Khz switch.

No personal bones to pick, but the first description is closer to the
actual case here. The only thing a mono radio hears is the center
carrier, which contains the L+R channel information. Hence, if you
broadcast a stereo signal with the left channel 180 degrees out of
phase from the right channel, mono radios will hear nothing.

Centered at 38kHz offset from the center carrier is the L-R channel
audio. Do some quick math, and you realize that if you add the L+R
and L-R channels, you get 2L. Divide that in half, and you recover
the left channel. If you subtract the L-R _from_ the L+R, you get
2R. Divide in two, and you recover the right channel of info.

There is, as the first comment notes, a 15kHz resolution limit on the
FM broadcast band, but for the L-R channel, the info is centered
around the 38kHz subcarrier, in the same fashion that the L+R audio is
centered around the center channel frequency.

Really, though, this description of FM Stereo Broadcast is more
appropriate to rec.radio.broadcasting. Check over there for
questions, answers, and lots of discussion about radio stations. For
more info (and corrections on anything I may have messed up on), check
a radio engineering handbook, found in the technical section of
libraries. Or perhaps an encylopedic reference would give a short
description also.

>>NOT TRUE - there are seven common frequencies:
>>462.5625, 462.5875, ...462.7125.

I guess I meant to say that the RULES OF OPERATION are unique to both.

FRS users must abide by their set of rules, and GMRS licensees
must abide by their rules. Licensed GMRS operators cannot transmit on
FRS freqs with their equipment - it must be FRS type-accepted. And vice
versa.

> of this is?

"FM Wide" is used for receiving FM broadcast stations or the audio
from TV broadcast stations. These services use a higher frequency
deviation (FM: +/-75kHz, TV: +/-25kHz) than the police/fire/cell
services (+/-5kHz). Without this wider bandwidth mode, the
broadcast services audio would be clipped and distorted. With
"FM Wide" only, the receiver would have poor selectivity for
the police/fire/cellular services.

What you say WAS true until congress updated the Electronic Privacy act and
INCLUDED CORDLESS PHONES.

Now cordlesses are treated just like cellular as far as listening to them.

Since the act replaces the law you refer to (that was passed back in '34), I'm
not sure if the "Don't divulge" stuff is applicable anymore either (I'm
referring to other non-commercial traffic, not phones).

Acutally, one way of describing how FM stereo works is this. It switches between left and right 38,000 times a second. If you're listening on a mono FM radio you can't hear the switching, you just hear a mixture. A stereo FM receiver can be built by taking a switch which operates at 38Khz where you feed the received signal alternately to the left and right channels. Many radios are designed this way. The 19KHz tone is used to "sync up" the 38Khz switch.

I suspect what you are hearing is a Quasi Sync or simulcast radio
system. Several radio transmitters are used on the same frequency to
increase range. The problem is that unless they are all on exactly the
same frequency, you hear the beat note between two or more. If this is 1
or 2Hz, then it sounds like a chuffing noise.

From: Charles Pringle <ccpsh@boco.co.gov>
Message-ID: <5482pf$pgp@news-1.boco.co.gov>
Source record: 219931

1. What is the sequence needed to allow the AR-8000 to auto detect the correct mode (AM, NFM, etc) of the signal sent from the Scout? I remember someone mentioning a sequence that allowed the receiver to do this.

2. What is an optional source for the N100 (or equivalent) FM trap sold by Opto? Their price seems too high.

In a previous article, nychronic@aol.com (NYChronic) wrote:
->Does anyone know the frequencies used in Yankee Stadium?
->I am going to the world Series and would love to here the plays being
->called.
->
->Thanks in advance for anyone with info.
-
For NYC PD, you can try the following:
477.0625
476.9625 Bronx patrol freqs.
471.0375 Yankee Stadium Detail (may or may not be in use)
476.7375 Citywide 1
476.6875 Citywide 2

What I can't figure out is what you mean by "would love to hear the plays being called" This is'nt football. The players don't have little wireless recievers in their caps. (although just about anything could be in Wetteland's cap! Have you seen that thing?!)
You can hear the plat by play on regular AM radio.
Actually I can't really see bringing my scanner to the game. Why not just sit back and enjoy.
Phil

: 1. What is the sequence needed to allow the AR-8000 to auto detect the
: correct mode (AM, NFM, etc) of the signal sent from the Scout? I
: remember someone mentioning a sequence that allowed the receiver to do
: this.

The AR8000 itself sets its mode based on the frequency chosen. This is determined by a "bandplan" which is programmed into the radio. The Scout only determines the frequency of the detected signal, it is not capable of determining the modulation method. The Scout commands the radio to tune to the detected frequency, the radio then sets itself to the proper mode for this frequency according to its bandplan.

: 2. What is an optional source for the N100 (or equivalent) FM trap sold

You don't have much to choose from. Radio Shack makes one that is center
loaded and is adjustable for various freq.s. I think it cost about
$15-18. It does beat the rubber duckie antenna.

RS, as I mentioned, or try the Grove home page.

>
> And...which bands or frequency ranges will it help with?

Well, the advertise 25-1300Mhz, but without adding a vertical element,
you don't get as good cordless reception.

For Sale: AR2700 Ser. #52816 received as a birthday gift and purchased from AES in Milwaukee less than 30 days ago. In box, complete with manual, receipts, all packaged accessories. Used briefly to check electronics and cellular modification only. Does not seem to have reported birdies, etc. (less than 1 hr total usage).

No gaps-.5 to 1300Mhz (800 Mod performed by Cellular Security Group in MA., documented cost $50) NFM, WFM, and AM - 500 Memory channels - 10 Search Banks, Full-Featured hand held, wide band receive scanner.

Will include Radio Shack AA Nicads and Radio Shack 23-242 Quick Charge (in box). Will also include Austin "Condor" LB/HB/UHF/800-900 rubber duck replacement antenna ($30 never used).

PRICE: $230 plus shipping. Selling because I have two handhelds and will probably never use this one. Cannot be returned due to mod. Email or call.

You don't have to be a lawyer to figure out that it is now illegal to
monitor cordless phones!

Yes, the law is:
1) Stupid
2) Virtually impossible to enforce
3) Broken frequently

It is still the law. You should understand this and make your own
decisions about your actions. If you want to blow it off because of 1, 2,
or 3 above, that is your choice. It is still illegal.

Thanks, Andy. That would explain why the mobile units dont't have the
problem, only the base units.

i dont think that the chp is going to go to 800 or 900 there was
something that i saw on the net about why there not going to 800.there
was to many things that was wrong. think about when there in notheren
cal and how many repeaters they would have to use just to get around the
mountians i used to in redding and there on trunked when i left the city
limits that was it no more signal

For Sale: AR2700 Ser. #52816 received as a birthday gift and purchased from AES in Milwaukee less than 30 days ago. In
box, complete with manual, receipts, all packaged accessories. Used briefly to check electronics and cellular modification only
(less than 1 hr total usage).

No gaps-.5 to 1300Mhz (800 Mod performed by Cellular Security Group in MA., documented cost $50) NFM, WFM, and
AM - 500 Memory channels -
10 Search Banks, Full-Featured hand held, wide band receive scanner.

Will include Radio Shack AA Nicads and Radio Shack 23-242 Quick Charge (in box). Will also include Austin "Condor"
LB/HB/UHF/800-900 rubber duck replacement antenna ($30 never used).

PRICE: $230 plus shipping. Selling because I have two handhelds and will probably never use this one. Email or call.

Due to the width of the band you require, I would suggest a Discone antenna. It can be used thru a wide range of frequencies like the ones you need. A discone, if you don't know about them, is a cone made of conductive rods (typically 8) with a slant height equal to a quarter wavelength of the lowest target frequency. On top of the cone, there is a disc with a diameter equal to the 70% of the slant height. It takes little space to be installed and performs well up to UHF.

Don't expect much gain with a discone; of course, you must pay gain for bandwidth. I once made myself a discone and it didn't show up more gain than a rubber-ducky at floor level but, it can be placed high above the rooftop thus avoiding unwanted indoor reflections, and increases gain as referred to the rubber-ducky.

Discone antennas are cheap and may be homemade (you may download discone.txt from ftp.funet.fi/pub/ham/antenna for construction details).

If you expect much more gain, you must consider some sort of directive antennas (yagis, quads..) but with a narrower bandwidth and higher attenuations when out of band.

RELEASE: 96-211

NASA TECHNOLOGY TO HELP PILOTS TAXI MORE EFFICIENTLY

Faced with a projected 32 percent increase in air traffic in the United States over the next decade, NASA and the Federal Aviation Administration (FAA) are developing advanced technologies to increase traffic-handling capacity at existing airports.

One of those technologies is called the Taxiway Navigation And Situation Awareness (T-NASA) system that will help pilots taxi safely -- particularly in low visibility weather conditions. The integrated system was developed as part of NASA's $100 million Terminal Area Productivity (TAP) program and is being tested at NASA's Ames Research Center, Mountain View, CA.

"For the pilot, taxiing at an airport today is done in the same basic manner as it was in the 1950's -- receiving a verbal route clearance, and then following the airport signs," said Ames scientist Dr. David Foyle, technical leader of the T-NASA research development team. "Despite the technological boom in avionics, GPS satellite positioning technology and advanced display media, the only cockpit aid currently available to the taxiing pilot is a paper airport layout chart," Foyle said.

"T-NASA's goal is to safely get the aircraft from the gate to the runway and from the runway to the gate as rapidly and efficiently as we can," explains Dr. Robert McCann, who along with Foyle, Dr. Anthony Andre, Dr. Durand Begault and Dr. Elizabeth Wenzel, has been

developing and testing T-NASA since 1993.

T-NASA is a combination of software and navigational devices designed to operate on the aircraft's flight deck. Unlike some of the other air traffic management tools now being tested by NASA and the FAA, T-NASA is not automated, so pilots will continue to manually control taxi maneuvers.

"There are other efforts to improve airport landing efficiency in low-visibility conditions due to bad weather, but without new displays and procedures for taxi, we feel that taxi operations may produce an airport traffic bottleneck," Foyle said. "Airport taxiing is extremely difficult in low-visibility weather conditions at unfamiliar airports, and at large, complex airports."

"T-NASA is a cockpit display system with three components," Foyle said. "The cleared taxi route is shown on a glass visor in front of the cockpit windshield, a Heads-Up Display (HUD), in a virtual reality manner. The pilot's aircraft position and that of other aircraft is shown on an electronic moving map of the airport on the instrument panel. Traffic warnings are produced via virtual 3-D audio techniques in which the warning sounds like it emanates from the direction of the traffic," Foyle said.

"By using GPS satellite positioning and an airport layout database, T-NASA updates the displays in real time," McCann said. "The HUD depicts the edges of the taxiway with a series of virtual `cones'. In addition, when there's a turn, we have virtual turn signs showing the angle and direction of the turn. As the pilot taxis, these virtual cones and signs move and change as if they were actual objects on the taxiway. The pilot's cleared route ends up looking like a virtual highway on the ground," McCann said.

"As the amount of traffic in the air increases, airline schedules become tighter and more intertwined," McCann said. "If there is bad weather at a major airport, there are tremendous disruptions on the schedules as backups occur. If we can increase the efficiency of airline surface operations so that planes are able to get very efficiently from the runway to the gate and from the gate to the runway, then we can impact the airline schedules and reduce delays. I think that's the bottom line for the taxpaying public."

Foyle predicted the new technology will lead not only to greater efficiency of operations, but to increased safety as well.

"Psychologists have shown that navigating with paper maps is a very difficult and demanding mental task," Foyle noted. "Our technology makes taxiing much easier for the pilot, particular under low visibility conditions. The HUD and the moving map shows the cleared taxi route to the pilot, and decreases the chance that the pilot goes off route and becomes a hazard to other aircraft. The moving map and virtual 3-D audio warnings provide pilots with better

knowledge of where other aircraft traffic are on the airport surface," he said.

"The T-NASA system has strong potential for automobiles as well," McCann said. "For example, if we could adapt a T-NASA system for automobiles, we might be able to prevent accidents involving drivers going off the road during heavy fog, rain or snowstorms."

Foyle and McCann will discuss the T-NASA project Oct. 23 during the 1996 World Aviation Congress and Exposition being held Oct. 22-24 at the Sheraton Gateway Hotel in Los Angeles.

Next summer, Ames and NASA's Langley Research Center, Hampton, VA, are scheduled to conduct a flight demonstration of some of the TAP components, including the T-NASA navigation system, at Atlanta's Hartsfield International Airport. Ames also plans a full mission simulation of T-NASA next year in its Crew Vehicle Systems Research Facility.

Hello and thanks for reading this message.

I have a Bearcat 350A mobile scanner mounted in my car and about once a month the scanner loses all of it's programmed channels. Is there anyone who has had a similar problem with the 350A?? If so, what can be done to remedy the problem?? Any suggestions are welcome.

If the Shackdroid doesn't know who Uniden is, it's pathethic because a professional would make a point of staying on top of things in his field. (We're talking "reading a magazine or two in the field," not "getting a doctorate in electrical engineering.")

If the Shackdroid _knows_ who Uniden is and is in fact "playing dumb," it's pathethic because he doesn't care enough to present even the impression that he knows about his field and could be a resource to his customers. Maybe I'm expecting too much here, though.

> I've got an adjustable transformer (12V-3V
>various increments) and it works well on the 3V setting,
>however there is a hum on the output of the scanner that is
>not there when using AAA batteries.

The basic problem is that the transformer is not well regulated and/or filtered, You can conquer this by putting regulation between the transformer and device. Use a 7805 or similar regulator, and set the transformer output to 7.5 volts. There shouldn't be a problem running the devices at 5 volts. If you're concerned, put a Zener after the regulator to drop it down to 3.

>playing. ...tyler
>
The sad part about it is as soon as you get in the door, they're all
over you like flies on crap - "Can I hup ya, can I hup ya?". (Yeah,
give me a million dollars.) I usually bite my tongue real hard and
tell them I can find what I need. However, in one store, the same
salesman can back to me twice within a few minutes - "Can I hup ya!?".
I gave him both barrels.

If you want to have some fun with them, tell them you're building a
time machine, and you need some help with parts, schematics, etc..
Usually does the trick, but the spacey ones think it's kinda *cool*.

From: steeg@natlab.research.philips.com
Message-ID: <steeg.845619800@vipera>
Source record: 220012

Hi All,

I have a very simple question. What signals are used by the SCOUT??
Are both TX and RX signals of the RS232 present?
I want to know if the connector used to connect an AR8000 and
a SCOUT can also be used to connect the AR8000 (via an interface) to
a PC. The normal connector used in the AR8000 for this is VERY impractical
and weak (IMHO).

Thanks in advance,

Patrick van de Steeg

a couple questions...
I've never seen one before....how big are they?

Is it something that needs to be mounted on a rooftop like a ham radio
antenna? or is it something that can be in a car with a portable scanner?

If it's a rooftop deal, does it need a mast?

How much does a new one run?

If/when I look for one, where might I find a new one if there isn't one
for sale in this group (as in which specific stores or what kinds of
stores in general, or mail order houses as well?)

And...which bands or frequency ranges will it help with?

email preferred. Reply to char0011@maroon.tc.umn.edu

thanks in advance,
Bill

It's probably in the microwave band (above 2Ghz), you'd need some type of converter to change it to a regular TV channel.

> None of the above, he means 100 kHz. This little radio is excellent, the one I had I
regret selling it
It had an internal ni-cad pack and could accept ICOM battery packs. Imagine, one moment
your
tuning through the police bands then through cellular then you hear shortwave radio program
in German.
It is the smallest full coverage reciever on the market. A radio, with today's technology
can not be
this small and master all of the radio spectrum, but this one is definitely the "jack of
all trades". When I
sold mine, my reasonig was that I could get a TNC and a modifiable scanner for the same
price. I do not think you
can buy a new modifialbe scanner today.

The frequency specs I pulled from my R1 brouchre!

I have one...and a discone and another discone and a straight
mast kind....

the scanner-beam is a good unit...but it does not pull
in distant signals like the expensive discone does....

That is 100 miles away....from San Fran bay area up against
the hillside and being able to pick up Sacramento Fire or
San Juaquin Fire on that antennae....or Monterey Fire or
CHp....or up in the Wine country....major success with the
BC 300....what a combo...

The single Mast type is good...for ultra high freq's....

The scanner beam is good for local listening..it
seems to get them all quite well...but you will
discover that for yourself. Local being within
30 to 40 miles .....

bill conduit

(snip)

>>WELL THATS SIMPLE RADIO SHACK SUCKS

Then go to one of the numerous OTHER consumer electronics stores that are located in most every city in the US...(and many other countries other than the US.) There are certainly a multitude of different outlets just as plentiful as RS, with sales-folk that know every detail of every item in the store. Let's see...there is...ummm...there is...uhhh. Well I'm sure there are many of them out there, I just can't think of them off hand, but in any case, you don't need to patronize RS. What has RS done for us in the radio hobby, anyway??!! What radios have they introduced that practically turned the scanning hobby on its ear? Have they made it convenient for us to get a needed resistor on a Sunday afternoon??? NO WAY! You can always go to an auto parts store for hook up wire and bulbs. Is each of RS's sales people fully trained to have solutions to every answer that a customer asks? NO WAY!! How could any self-respective scanner nut go into a store that can't give him free technical advise and complete specs on all parts and equipment? NO WAY! When a guy goes into RS he should expect the salesman to know his product inside and out...every detail...just like the car salesmen at the Chevrolet dealer do. We all know that they have every answer to every technical question about every aspect of each automobile...and we should expect the same from RS. It is terrible to think that someone should go to RS and have to think for themselves, or look for a technical question from somewhere else like the (gasp) library or the internet.

You're right...Radio Shack sucks.

RS is the largest manufacturer & retailer of stereo speakers. (Made by their factories overseas, of course...) Yes...they make and sell more than Bose and JBL, etc.

They make their own audio tape, and that of Memorex. (I've been to one of the factories in Fort Worth and witnessed the operation.)

Grid Computers.

Lika circuit boards (which BTW, has made boards for the F-16 and the Space Shuttle)

They make their TV antennas in Burlington Iowa in one of their factories.

They make most of their co-axial cable.

They used to make all their own PCs, until the profit margin dropped too low...then the sold their facilities to another computer outfit.

Don't know if the still do, but they used to make most of their low to mid range analog multi-testers.

RS manufactures about 30% of what they sell...but about 50% of what they manufacture is sold by other companies.

Need more?

BTW, I am biased. I am a stockholder in the company...that's also why I know about the details of their manufacturing and importing.

Most of the pictures sent by the helicoptors is on microwave. They
use a fairly directional system on the helicoptor which actually tracks
the mountain top receiver.

I believe it is in the 2GHZ area.

Unless you are between the two, chances are not favorable you would
see anything.

You could call Troll systems, in Valencia CA and ask. They make
the xmitter systems.

What sort of hook up would be needed to hook up a scanner to a webpage
live.

Just what would be required?

Peace

I am in the market for a new scanner, I have had a few Radioshack models over the years, and also a couple of bearcats, and have been pleased with most.
Now I look to buy a new one, in the general price range of 3 to 4 hundread dollars, could anyone give me thiere oppinions on the best model for that amount of money?
Any help is appreciated.
Thanks
Garry

Try 141.850 or 143.850 both AM not FM!!

They were here in Albuquerque two weeks back and it was the greatest thing being able to listen to them make their calls. I was on a parking detail (one of those great Air Force "extra duties") and brought mt FT-50 along. When the show started and people heard the transmissions on my HT they all crowded around and took a listen. One of the neatest things was listening to the team commander make the calls and occasionally say "Weeeeeeeeeeeeee" as they did some of their stunts. Pretty hilarious actually.

30k steps

> > What opions are out on this scanner? Seems not to be popular.

The CHP reject scanner has most of the usual features: manual, l/o,
direct freq' entry, 10 banks of 10 memory channels, backlit LCD display,
unique design. No "options".

> >
> > Does Scancat gold support this radio and can it search for frequencies
> > under computer control?
They (Scancat) offered a version that did interface with the 8100.
"Control" may be too grand a term for what it will do.
> >
> > Does it use a standard serial cable and terminal program or a special
> > cable and special computer program to talk to it?

Standard cable. Simple DOS program to upload and edit freq' data files.
It's much faster to edit these files with Windows Notepad as they are
just plain text.

In short, you don't want one. Even at that $99. price I saw. Good luck.

1707. Re: AR 8000 and Opto Scout **********

Newsgroup: rec.radio.scanner
Date: 1996-10-19 00:00:00 UTC
From: daniel@securicor.co.nz
Message-ID: <5498p1$h4a@wnnews1.netlink.net.nz>
Source record: 219881

Anthony D. Proctor (proctor@ix.netcom.com) wrote:
: I'm seriously thinking of buying an AR 8K and was wondering if anyone
: had any experiences (good/bad) adding the Opto Scout 40.

I have had my AR8000 for about 4 months, and my Opto Scout for nearly 2 months.

Firstly, the AR8000. Its a *great* scanner with heaps of features not found anywhere else. The ability to put a text label on each channel is a simple but VERY handy feature. Continuous coverage, tuning to 50Hz, external interface and control, etc.

However the AR8000 has some shortcomings and bugs. Some people (including myself) have suffered from the "wandering birdie" problem - where you get birdies that move around, so you can't just lock them out. (Solved with a simple crystal replacement). The standard AR8000 antenna is crap, but you can easily buy good replacements from places like Grove (Grove's 42in whip is great). Some people have reported that the BNC antenna connector in the top of the case can work loose (clear nail polish or superglue fixes that). If you switch off the AR8000 while you are on a passed (locked-out) channel it can confuse the radio (never had that problem myself).

But even so, once you've worked around some of the above the result is an *unbeatable* scanner. My scanning has been much more sucessful since I upgraded to the AR8000.

The Scout is a very interesting, and much misunderstood, piece of equipment. Basically it locks onto STRONG NEARBY (near-field) signals. The signal has to be nearby, and 10db or so stronger than anything else (including RF noise) that the Scout can hear. It can reliably detect the difference between a real signal and background rubbish.

If you buy a scout, it is critical that you understand how it works. Some people have posted to newsgroups saying the Scout is useless/deaf/etc - these remarks obviously stem from a lack of understanding of the product.

You have to be close to the transmitter. How close depends on the signal strength, your antenna (gain and selectivity - higher gain and more selective is better), and other siganls or noise in the area.

A wide-band antenna will allow you to capture siganls with almost any frequency (Scout coverage is 10MHz to 2GHz). However a wideband antenna will pick up more noise and other signals - meaning the signal of interest will have to be stronger to be captured. If you know the general frequency of the signal(s) you are trying to capture, it is better to install an antenna resonant (only) in that band. You will have better gain, and the Scout will not be distracted by noise and signals outside the band of interest.

For example, I frequently operate my Scout with a 400 MHz whip. That increases the range from which I can capture land-mobile 400-500MHz signals, but greatly decreases the range from which it captures airband (118-136MHz) and cellular (800-950MHz) transmissions. Of course, that's exactly the way I want it. ;-)

Lost of people test their Scout with cordless phones, often 5 minutes after receiving the Scout. They get a shock, because the Scout will hit on most cordless phones from only 6-12in away. This is because the signal from the phone is weak. People then (incorrectly) infer from this that the Scout is deaf, etc.

(Now to really answer your question ... sorry it took so long!)

: Does the Scout add significantly to the 8K's usefulness and enjoyment.

Yes. :-)

Using the SAC8000 plug-and-play interface to connect the Scout to the AR8000 (no mods required) it is easy to hook them up and get out on the road.

They are an unbeatable combination. You can listen in on any nearby transmissions with no effort at all. It reduces the "frequency finding problem" to "go stand near somone who's transmitting". ;-)

About two months ago, our airport here held a joint exercise with local fire departments, ambulance and police. I was out there with my Scout and AR8000. As soon as any agency transmitted, the Scout locked onto the frequency and tuned the AR8000 so I could hear what was being said. Instant and automatic. I didn't have to know what the frequencies were in advance (although I knew they were 400MHz, so I fitted the whip) and I didn't have to write them down as I heard them - the Scout captured them in memory. I didn't miss a thing all day, and when I came home and downloaded the frequencies into the computer I had a "spectrum analysis" of the radio usage at the airport, which I easily turned into a list of frequencies for each agency.

: Anybody have any vendor recommendations.

I bought my Scout from MetroSoft, 167 Madison Avenue, New York, NY. At that time there was a package deal of US$440 for the Scout, DB32 (wide range antenna) and SAC8000 interface kit for the AR8000. (I have to be choosy about vendors, because I'm in New Zealand ....)

Anyhow, I hope that answers your questions and helps anyone else interested in the AR8000 and Scout.

Daniel.

Had a similar problem with a Bearcat, but not the 350A. The only way
I found to solve the problem was to wire it directly to a 12 volt
source that was NOT switched on with the ignition. I suspect that
switching it on with the ignition caused some type of transient that
trashed the memory. A bit of a pain cause I have to remember to turn
it off but if I forget it's no big deal since it don't draw enough
current to hurt the battery. Anyway it's better than reprograming
once a month.

>schematic? Thanks in advance !
> P.S. does anyone know of any soundblaster demodulators that actually
>work?

Take a look at Ralph Taggarts book "Weather Satellite Handbook",
Chapter 5, page 5-5. I have used this circuit (I used a 4046 VCO in
place of the A to D converter) and got pretty good results...but only
after much tweeking of the 2 resistors and the capacitor used in the
VCO circuit. The limiting factor in my set-up, I think, was the fact
that I was using a RS 2006 scanner to receive the satellite signal.
Unfortunately, the narrow band bandwidth is too narrow and wide band
is too wide. I have a different scanner now with a bandwidth better
suited for this application...your note has inspired me to give it
another try! By the way, for debugging purposes, I found it very
convenient to record the satellite signals on an old VCR...much better
than waiting 12 hours for the next pass to check out the "latest
tweek" :) Good luck and keep me posted on your progress.

It's been my experience that the newer PCs are pretty clean. I've seen more problems with other devices interfering with computers, particularly the monitor, than vice versa. An easy way to check your PC for leaking RFI is to use a portable AM radio like a walkman with earphones. Tune the dial to a lower frequency away from any strong stations and move the radio around the different components of the computer as it's working. You can thusly isolate any offending components.

1717. Re: B Radio Shack salesman plays DUMB !

Newsgroup: rec.radio.scanner
Date: 1996-10-19 00:00:00 UTC
From: bluedot9@aol.com
Message-ID: <54a4n5$6pf@newsbf02.news.aol.com>
Source record: 219891

At my areal RS stores (about 12), the droids are shocked when I say that some are Uniden, and some are GRE. They really believe that this stuff is MADE in Fort Worth.

This guy gave me the dirtiest-fucking-look after mentioning the facts, and then he blew me off as being a nut. All he could do was give a cheesy smile, shift his eyes, and say (with a chuckle), "Naaah,...(hehe) I've never heard anything like *that* before. It says Realistic and Radio Shack on ALL of OUR scanners."

Furthermore, I am considered a nusiance by the droids, because I know what I need, and to top things off....I start helping other customers with what they should and shouldn't buy!!!

I kept on telling some customers that GMRS was what they where looking for, and not CB (for their particular application). The droid said that GMRS was only a Global Pos. Sat. receiver, and couldn't be used as a radio. Get it? GPS</>GMRS HA!

Then the droid wanted to sell them either the HTX-202 or the HTX-404, because it had more channels to talk on!!! Get a load of this bastard. Then I told them to go to a REAL radio supply store because I knew a guy at that store that could give them a substantial discount, and he knows what he is talking about (not like RS mall droids).

They also get pissed when I look for scanners with date codes. All these fuckers look at me like I am a nut, and they say..."sir, they're all the same....none of them can be modified." When I find what I am looking for I just buy it and leave without a word. I don't tell them exactly what I am looking for (< 2A4, and other), and I don't tell them how to mod the scanners.

I have told some about the OS-535 and such and the first thing they do is say, "but that will void your warranty...", and "well I can't sell you something if your are doing something illegal...it's store policy.....!!!!" The latter came about after the Oklahoma City Bombing (which I have been to, and is very sad to see--yet it's so small and it looks about ten pounds heavier on TV).

Kinda sounds familiar to you, doesn't it?

Remember the earlier thread on the downfall of HAM radio with the
advent of no-code Tech licenses? Whatcha bet some RS dealers are
pushing HTX-202/404s to Joe Bag O'Donuts for "Family/Beer Buddy" comms
and they're the ones cluttering up the band with bullsh*t. I went to
my local RS and asked about GMRS. The newbie pointed me to the Store
Manager/HAM/"Lecktronix God" for assistance. He had no idea of what
GMRS was about except "..I think you need a ham license." I have to
bite my tongue hard when I hear someone come into the store and ask for
help with an electronics problem and I hear what their response is.

: A
: >stereo FM receiver can be built by taking a switch which operates at
: >38Khz where you feed the received signal alternately to the left and
: >right channels. Many radios are designed this way.

: That's pretty funny. Now, tell everyone how it REALLY works before
: some kid thinks this is true and runs off to tell his friends.
: Remember, add the L+R to the L-R signal, etc, etc.

Actually, what I said was perfectly correct. I was describing how it works in the time domain. And yes, many radios decode FM stereo using that method. I built one from a kit some time ago.

And also, your description correctly describes the decoding, but describes what happens in the frequency domain. Yes, there's a baseband L+R signal and suppressed-carrier 38KHz L-R signal.

Both descriptions are correct, there's just two different ways of looking at it.

Can a Uniden MR-8100 be computered controlled like other computer controlled scanners (FRG-9600, IC-R7000, AR-2700, AR-3000A, AR-8000 etc)?

What can it do under computer control?

Can you program cell frequencies in 30kHz or 12.5kHz steps? (ie, if you program channel 1 with 888.830 will it round down to 888.825).

What opions are out on this scanner? Seems not to be popular.

Does Scancat gold support this radio and can it search for frequencies under computer control?

Does it use a standard serial cable and terminal program or a special cable and special computer program to talk to it?

Speeding in your car is illegal also and is a lot more dangerous to the general public. Does everyone do it? Does that make it right? No, but sometimes the law is a little rediculous and it needs to be challenged. You can thank that idiot Hillary and her first lady Bill for listening to be illegal. Maybe those rf signals shouldn't come into my home. That is trespassing! If they come into my home, don't I have a right to listen to them? It's not like I'm going into another persons house and planting a bug. (only Uncle Sam has the gall to invade somebody's privacy and get away with it.) Why is it illegal for us to listen to a lot of things, but Uncle Sam can whenever he wishes? Why Why Why? I didn't vote for that commie Clinton before and I'm sure as hell not voting for him this time. Tyler

Yeah, but that basically means you have to be caught in the act by a cop, right? I mean, you could have your Scout/AR8000 clipped to your belt and have on headphones and be listening to the stuff that you have to mod your scanner to get, and be right on the steps of the county courthouse and who would know?

In response to Ed's question...

YES it is! But we do need to make it clear to Washington D.C. if we
hope not to lose any more frequencies. It appears that the loss for
frequencies is increasing at an alarming rate lately.

Hi All,

I was wondering if anyone else had come across the cordless phones used by Toy R US?

I came across a carrier today on 457.5375 and 457.5875 while driving past a Toys R US store in Wheaton, MD. While I was waiting at a stop light, the 457.5875 came active and I heard someone say "Toys R US Wheaton, may I help you." The 457.5875 frequency was Full Duplex (both sides) with the handset on 467.8125 (input).

The frequency combination in use is the same as those that are allocated to Fast Food chains (like KFC 457.5875/467.8125). I've seen various listings in the FCC files in the past that have Toys R US allocated to 35.02/154.600 (same as McDonlds) but was never able to find out what this was used for. I think this may also be used for their cordless phones in other stores across the country.

Please let me know if anyone else has come across this.

Thanks,
Bob

I had a couple of these radio's and chargers. I don't have them
anymore, but wanted to tell you the 2 pocket charger only charges 1
radio and 1 spare battery at a time. In my opinion, the charger was way
overpriced, it was something over $100 and it just used the AC adapter
that came with the radio. It just took the - and + 12V and placed the
power at the base of the radio rather than at the AC adapter hole on the
radio. You might want to think about designing a homemade version to
save yourself the $$$$.

Thanks Jim --

I'm beginning to think it is a good buy. Just checked it at "Best
Buy" and their price for the BC 860 was $199.00! Quite a
difference.

Anyone else know of any other chains stores that carry Bearcat
Scanners so I can make a few more price comcparisons before taking
the $159.00 plunge?

TIA

Geez, learn some history (and some law) before you spout off
in public!

First off, ECPA was signed in 1986. Clinton wasn't elected
until 1992.

Second, electromagnetic radiation cannot "trespass" under
any law on the planet.

>does it help?
>
Basically the software allows you have have as many different 1000 channel combinations as you want.. For instance if you live in LA and go to NYC often before a trip you'd program in NYC with the SW and required HW then upon return reprogram LA.

Also the software allows faster scan/search rates.. DTMF If available with the interface you use. There are many other things it enables.
.
Too see more.. Try the following web page: http://www.scancat.com

They are the makers of ScanCat. There is other software available but I don't know of the webpages for it.

Message-ID: <54c0kv$vdv@prometheus.localnet.com>
Source record: 219793
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.scanner

For sale or trade: Radio Shack DX-160 S/W with matching speaker. The unit is very good condition cosmetically. It receives very well. The only problem is that the tuning dial needs to be restrung. It tunes, but only 1/3 of the dial. I would assume that this is the problem as that has occured in one other radio of mine that was that sort of tuner. I would like to sell it for $75.00 + shipping or trade for something in the area of handheld scanner (what do you have?).
If interested, E-mail to: radioman@localnet.com please.

Message-ID: <54c417$91r@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 219796

I saw that with other radio-shack scanners certain results could be
obtained by holding certain buttons down and turning the unit on. I came
up with a couple that I don't know what they do. I could use some help if
anyone knows what these do!
Hold down: Shift and Review/4 key and tun unit on. The display will
either say "save on" or "save off". What is this mean?
Hold down: Keylock, 2, and 9 keys and turn the unit on. My display reads
"6b4dh" for a couple seconds then "usa 1.00" for a couple seconds.
If anyone has these answers please e-mail me, or post reply.
Another handy one is hold: shift, 2, and 9. This checks all LED's on
screen.
Forgive me if this is published somewhere or common knowledge, but I am
fairly new to this scanner hobby.
Thanks.
-Aaron

Now, why would someone ask the scanner group which cordless phone to buy? Could it be that he's asking which one we would buy because it is "unmonitorable" or should we lead him down to the "Buy-the-49MHz-model-it-is-your-best-value" path? ;o)

Buy the 900MHz digital, spread-spectrum cordless. You're safe from prying ears that way (at least for a couple of years).

The R1 does do a couple of things to be aware of:

Adjacent channels within 100KHz must be less then -50dbm
or it will break squelch.
Anything beyond that wont bother unless its much stronger
such as an FM broadcaster.
It uses band pass filters that are very wide so if you want
a particular band to be free of interference you need
a preselector or preamp-preselector.
In my car I have 'bullet proof front ends' with LNA's so I get
max range on my channels of interest. In portable I have
a series of miniture RF channel filters that do the trick including
keeping HT's in the same car out of it.
And since it will pop in any freq I want, in buildings its
perfect. With the above combination I use the things all day
and have several of them. For other perposes there are always
other radios.

There is a fix to get rid of the 100KHZ adjacent channel,
replace a coupling C in the 2nd IF with a crystal BPF at 10.7 MHz,
very difficult to fit in and I havent tried it.

I studied the schematic and I may try it on one thats down for repair.
-Chris.

So go get a job there! RS needs more good people like you!

Whats that? You dont want to work crap hours for peanuts and cater to the most diverse customer base of any retail chain? You rather flip burgers than have to know _everything_ about HAM, car alarms, phone installations, and DSS systems?

Im completely sick and tired of all this RS employee bashing. I worked for RS for two years a while back, and made it up to manager. Its a completely thankless job from every angle...company/customer. The pay is lousy if youre not a used car salesman type (not very condusive to getting the skilled people to stay).

It pisses me off that all these experts expect these poor, minimum wage slobs to be able to answer a question about DTMF decoder chips. If you need one of those things, your ass better have a catalog number ready when you enter the store...otherwise youre simply a moron looking for something to complain about. 95% of Radio Shack customers need a battery, alarm clock, or phone thingy...not anything in the 27x series.

See ya, Joe

Hi,

I'm interested in receiving military aircraft signals on my scanner which is not capable of doing this. Did I see a doohickey in a Grove catalog some time ago that you put between the antenna and the radio that allows the signals to be received in another frequency range?

If so, how does this thing deal with the AM/FM difference? Most military air transmissions are AM, right? From what I understand, my scanner is only FM.

Do these things work?

How much $$$?

Thanks,

-Chris Estes-

>You're right...Radio Shack sucks.

OK Andy, point made. I've not joined this thread up till now, but I
think your statement is due a reply.

I don't believe that anyone expects the folks at RS to be all-knowing,
but realistically (pun intended), they should have a WORKING knowledge
of the products they sell. We would expect nothing less of any other
retail operation. It is truly scary that the typical employee at RS
knows virtually nothing about the product they sell except the
information in the catalog. Yes, it's nice to have that resource in
most major towns, but please don't try to defend the hiring and
training practices. It just won't wash.

Mark

The truth as I perceive it to be.
Your perception will be different.

Friend is writing a story where a hacker gets into a satellite to find a
ship at sea. THen changes coordinates so ppl couldn't find the ship.
What sat would the hacker get into and maybe how? w/o mentioning specifics..
thanks

>You're right...Radio Shack sucks.

Good point. I went into a showroom of a very well known computer
manufacturer that just happens to be located in Boise, Idaho to look
at a new computer. The salesman knew less about computers than I do,
and I'm not an expert by any stretch of the imagination. And if I buy
a computer there, can I bring it back and get a full refund, no
questions asked, on a Sunday afternoon? Well, probably not.

It certainly pays to know what you want when you go into Rat Shack,
but that goes for any other place as well. Some Shacks have lousy
salesmen, others are pretty good. Nice thing is, nobody is forcing
you to shop there.

Oh, and by the way, I haven't been asked to pay for a catalog the last
two years at the Shack I use. Price wasn't even mentioned this year.

Using your computer with the AR8000 allows you to backup and restore the memory channels, as well as manage your frequency files.

You can type in the channel text labels on your computer keyboard instead of struggling with the AR8000's "twist-the-knob" method.

You can exchange frequency files with others.

You can sort the frequency assignments in a bank to give the best speed performance.

You can print out a list of your memory channels and their current contents.

You can set and store up search ranges.

-- That's why I use my computer!

Check out the FREEWARE package that Rob McKenzie and I put together. It is a frequency and channel management package that uploads and downloads memory channels and search ranges. It does not provide real-time, interactive control of the radio. It requires MS Access.

I've never thought they SHOULD be able to answer those questions. I have a problem when they PRETEND to be knowledgeable, when we all know that if they were, they'd be a TECH somewhere
else. If a salesman simply helped me find what I needed without the added "knowledge" I would be beyond happy.

Some of the best RS salespeople I've ever met simply knew their own products, they didn't claim to
be electronic techs or engineers, just salespeople. Just as I would not ask a car salesperson a
mechanical question, I don't think an RS person has to be able to answer an eletronic one.

I like to think of it as Circuit City with a parts department. <g>

Factory Refurbed is better than NEW-anytime. Think about it, most units
are "burned in" at the factory, at around 115% of line voltage, if
something fails it's replaced. What happens a lot is that the one weak
link inthe system doesn't quite fail and is shipped out. A few week later
the weakest link goes. Back to the factory and replaced. Now the weakest
link in the system is fixed. So you have found that one part and the rest
of the scanner will probably last years.

Out of curiosity, what bands are blocked out??

I thought it was only the US which mandated scanners which block out the US cellphone freqs (824-849,869-894). Does yours have these frequencies blocked? Or the European cellphones, which are in the 900's somewhere? Or some other band? Please explain.

It might the case that there are bands which the radio was never designed to receive in the first place. Like 500-700 or 225-400. If so, you'll probably have little luck restoring them.

That's not "trespass". It's "criminal mischief". It
would be "assault" if you did it to a person. Try again...

>There are all sorts of laws controlling what can be done with EM
>radiation. Limits on cable TV leakage are a good example of control
>of electronic "trespassing."

Two different things from a legal standpoint. If you want to
limit your exposure to EM radiation that you are not
generating, then say so. Lay off the unrealistic and
legally unsupportable crap about trespassing. Only people
can trespass.

The last time I entered a Radio Shack Store and tried to buy
Ni-Cad rechargable batteries for my scanner I received 3 responses
from 3 clerks.

1) There is no such thing as a rechargable battery. If you try they
just explode.

2) All batteries are the same it don't matter none what kind
you use all of them can be recharged.

Store Manager
3) We don't sell them cus they don't exist.

At this point I calmly tried to explain that they do exist and that
radio shack has them they even have their own brand, I even showed
the idiot a photo in the catalog he till claimed they did not
exist.

I left the counter and proceeded to look for myself, the manager
threatened to call security. Then I saw where they hid the
batteries (way back behind the blank cassette tapes. Even then
he refused to admit they sold the very item I held in my hand.
BUT HE SURE WANTED MY MONEY!!

1810. Re: Continental Airlines scanner Policy anyone ?

Newsgroup: rec.radio.scanner
Date: 1996-10-20 00:00:00 UTC
From: "Paul S. Castellani Jr" <CFIPAUL709@aol.com>
Message-ID: <326A8E00.2B22@aol.com>
Source record: 219840

Truth be known, the answer is clearly written in the FAR part 121 regarding the use of portable electronic devices. It plainly states that you cannot use a receiver or transmitter at any time.

Basically the only way around this would be to ask the Captain of the flight if he or she would mind if you used it. Otherwise risk getting yelled at by the flight attendant. Typically if the Captain is knowledgeable about radios and the like he won't have a problem with it, but it is always up to his discretion. This policy is industry wide.

Hope this helps.

Paul

I recently purchased two used Uniden GMR100s and need a charger! The model number for the AC adapter is AD102. The output is 12 V 200mA.

The 2 pocket trickle drop-in desktop charger that it plugs into is model number GMR105.

I would pay the shipping charges for one if anyone has a spare one laying around collecting dust!

All responses should be sent directly via e-mail!

Thanks in advance!

Andrew

>So go get a job there! RS needs more good people like you!

They couldn't afford me.

>Whats that? You dont want to work crap hours for peanuts and cater to
>the most diverse customer base of any retail chain? You rather flip
>burgers than have to know _everything_ about HAM, car alarms, phone
>installations, and DSS systems?

You've confused me with unskilled labor.

>Im completely sick and tired of all this RS employee bashing. I
>worked for RS for two years a while back, and made it up to manager.
>Its a completely thankless job from every angle...company/customer.
>The pay is lousy if youre not a used car salesman type (not very
>condusive to getting the skilled people to stay).

I agree. Not all RS salesfolk are cut from the same stone. I've run across
several outstanding individuals in the past.

>It pisses me off that all these experts expect these poor, minimum
>wage slobs to be able to answer a question about DTMF decoder chips.
>If you need one of those things, your ass better have a catalog number
>ready when you enter the store...otherwise you're simply a moron
>looking for something to complain about. 95% of Radio Shack customers
>need a battery, alarm clock, or phone thingy...not anything in the 27x
>series.

So the 5% of us who go into the store for technical assistance other than
phones/toys/DSS and can't find the help we need are morons? I'd like to
hear from others on this.

>See ya, Joe

You sound as if you have mixed feelings about leaving Tandy. I'm sure
you were an excellent manager (as is evident from your interest in this
NG). I believe Tandy may not care that they have a horrendous employee
turnover problem. I believe they should offer more incentives like pay
bonuses for technical training, a longevity pay scheme, greater
contribution-matching 401K plan, or other such monetary incentives.
Surely, with their "cornering of the Sunday electronics shopper"

market, they can afford to treat their employees better.

IMHO,
Steve S.

You understand that the scanner is connected to a computer, right? The
software can be used to upload freqs to the scanner, manage search and scan
banks and greatly enhance the scanner's capabilities in several other ways.

Interesting thing about Radio Shack people. 99% of the RS people I have dealt with have been quite friendly and helpful. True, they don't know everything, but they do their best. Perhaps if RS helped their employees get an eletronics education, they would not only be more helpful, they just might stay with the company longer. Of course they would have to be paid better, but if they can help out the customers that need the more technical help then they just might get more of those customers. And we all know that more customers means more money.

Keep up the good work all you RS people!

Actually, you have several options in addition to the RS model (which is
pretty good for $10). Two popular antennas are the Diamond RH77CA and the
Austin Condor (forget the model numbers). Both are about $30-$35. I bought
the Diamond from Tucker, but I'm sure that it is widely available and
probably for a couple of bucks less than the $32 I paid.

> *snicker* Don't EVER buy a stereo at Rat Shack. ...Tyler

I was at radio shack last weekend buying some parts, connectors, etc.
I was also searching for some inexpensive parts to help a neighbor
install a stereo in his car - amps, 12" woofers, etc.

Well, the amps only had line level inputs. The radio shack guy came
up with the usual "Can I help you?" and I told him my stereo had
speaker level outs and the amps had line level in's and he said
"Yeah, we have what you're looking for - I can get you a 4 pack for a
buck or two and you can put them on!"

OH please!!!! I told that guy that he was an idiot! And that if you
did that, you would over drive the amp, distort the sound, etc.

Those radio shack people really irk me!

John

1831. TOYS R US Cordless Phones?

Newsgroup: rec.radio.scanner
Date: 1996-10-20 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@ix.netcom.com>
Message-ID: <326AA829.27FA@ix.netcom.com>
Source record: 219861
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi All,

I was wondering if anyone else has come across the cordless phones used by Toy R US?

I came across a carrier today on 457.5375 and 457.5875 while driving past a Toys R US store in Wheaton, MD. While I was waiting at a stop light, the 457.5875 came active and I heard some say "Toy R US Wheaton, may I help you." The 457.5875 frequency was Full Duplex (both sides) with the handset on 467.8125 (input).

The frequency combination in use is the same as those that are allocated to Fast Food chains (like KFC 457.5875/467.8125). I've seen various listing in the FCC files in the past the have Toy R US allocated to 35.02/156.600 (same as McDonlds) was never able to find out what this was used for. I think this may also be used for their cordless phones in other stores across the country.

Please let me know if anyone else has come across this.

Thanks,
Bob

Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

Hi,

As with the Icom IC-R10 the AR7000 was seen for the first time here in the UK at the Leicester Show last week and I hope this provisional information is of interest.

AOR AR7000

New high performance DSP technology receiver

We are pleased to provide provisional information on the latest receiver from AOR.

The AR7000 is AOR's latest high performance receiver with many new features based around modern technology.

The AR7000 confirms the arrival of the digital revolution employing true Digital Signal Processing. Signal demodulation & filtering are performed at high speed 16-bit DSP with digital down conversion digitising signals at an I.F. of 10.7MHz.

A built in 16 colour 3.5 inch LCD (similar to the SDU-5000) provides visual scan, search and other display data including a spectrum trace. The AR7000 may also directly drive an external NTSC or PAL video display.

Twin VFO's are featured with Automode band data (which can manually be overridden), there are four programmable clocks and five programmable timers whilst built in RS232 support & infra red remote control are also standard features.

Availability & Price

No firm indication has been given of anticipated deliveries or price however it is hoped deliveries may start during the early part of the 1997.....here's hoping :-)

Provisional specification

Model AR7000

Frequency Range 100kHz - 2GHz

Modes AM, FM, USB, LSB, & CW

Memory Channels 1500

IF SSB - 2kHz, 2.5kHz & 3kHz
CW - 50Hz, 150Hz, 250Hz, 500Hz & 800Hz
AM - 3kHz, 6KHz & 8Khz

CW Tone 400Hz, 600Hz & 800Hz

NFM Audio Audio Filter 2.5kHz, 3Khz

WFM Audio Audio Filter 7.5KHz

I.F. Shift +/- 8.5kHz

AGC Fast, Slow

The above info togethwr with a rather dark picture and screen .gif are
available on our web site.

All the best

1834. Icom IC-R10 Info

Newsgroup: rec.radio.scanner
Date: 1996-10-20 00:00:00 UTC
From: Clough@javiaton.demon.co.uk
Message-ID: <845847852snz@javiaton.demon.co.uk>
Source record: 219864
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

Hi,

Information on Icom's follow on the the IC-R1 is now available with deliveries anticipated within the coming months. The IC-R10 was seen for the frist time here in the UK at the Leicetser Show last week and whilst no real impressions of performance could be gained the set is well proportioned and slightly smaller than the AR8000 all round.

* All mode (FM, WFM, SSB, CW, AM) receiver

* Newly designed 'busy catch scan'

* Wide-band coverage with all mode receive capability
(0.5 MHz to 1300 MHz)

* Real-time bandscope
(a first for handhelds) making it easy to bind busy frequencies and see the propogation conditions of frequency bands.

* Ample memory channels with memory name function
1000 memory channels are available in the IC-R10, and 8-character memory names are storable for each channel and each bank for easy recognition. In addition, a maintenance free EEPROM is employed for memories.

* Improved receiver characteristics
Tuneable bandpass filters are employed in the IC-R10 to provide good image and intermodulation rejection characteristics.

* Useful scanning functions
Scan types include programmed, memory, bank, modes as well as a new scan type, 'BUSY CATCH' scan for FM mode. The 'BUSY CATCH' scan searches for the next busy frequency using a 'para' receiver circuit while the actual receiver circuit is detecting a signal (scan pauses) Then, the actual receive frequency jumps to the next busy frequency when scan resumes. This speeds up the total scan speed.

* VSC Function
Icom's original VSC (Voice Scan Control) is available - the first time on a handheld receiver. This function pauses during scan only when modulated signals are received.

* Multi function dot-matrix LCD
A multi function dot-matrix LCD is employed in the IC-R10 to display a great variety of information, such as receive f frequency, mode, real-time band scope and memory names, etc.

* Full computer access capability
The IC-R10 can be connected to your home computer for cloning, downloading and receiver control. With an optional CS-R10, memory contents, frequency, mode and memory names, etc. can be programmed or downloaded quite simply. The receiver control system, Cl-V, is employed in the IC-R10 to control receive frequency, mode and signal strength, etc. In addition, the IC-R10 has 2 separate connectors for cloning and Cl-V connection.

* EDIT switch provides easy editing or revision of memory contents.

* Memory copy

* Auto Mode and Tuning Step for simplified operation.

* 36 mm internal speaker for ample power output and clear audio.

* AA Battery Power
4 AA size dry cells (or Ni-Cad batteries) can be installed or a 4.5-16V external power supply can be connected.

* 100 Hz frequency resolution.

* Built-in 20 dB attenuator.

* AFC function

* Noise blanker and Auto Noise limiter

Availability & Price

We hope to start seeing deliveries of the IC-R10 at some time during November and December. No firm price has yet been given however a price of around that of the AR8000 is expected, maybe just a little higher.

Provisional specification

Model IC-R10

Frequency Range 500kHz - 1300MHz

Modes AM, FM, USB, LSB, &
CW

Receiving SSB, CW, FM Triple
System superheterodyne

IF Frequencies 1st - 266.70MHz /
429.10MHz
2nd - 10.7MHz
3rd - 455kHz

Memory Channels 1000 each with 8
character storage

Sensitivity Frequency FM WFM AM SSB/CW
(Except spurious
points) 0.50 - 4.999MHz 0.5uV - 1.6uV 0.4uV

5.00 - 74.999MHz 0.32V - 1.0uV 0.25uV

75.00 - 199.999MHz 0.32uV 1.0uV 1.0uV 0.25uV

200.00 - 299.999MHz 0.4uV 1.3uV 1.3uV 0.32uV

300.00 - 699.999MHz 0.32uV 1.0uV 1.0uV 0.63uV

700.00 - 799.999MHz 0.79uV 2.0uV 2.0uV 0.25uV

800.00 - 899.999MHz 0.5uV 1.6uV 1.6uV 0.4uV

900.00 - 1400.00MHz 0.5uV - 1.6uV 0.4uV

Selectivity SSB / CW More than 4kHz / 7dB
AM, FM More than 15kHz / 6dB
WFM More than 150kHz / 6dB

Audio Output More than 100Mw at 10% distortion

Power Internal - 4 x AA dry cell or Nicad
External - 4.8 - 16 volts DC

Current Drain Rated Audio: 200mA
Standby: 110mA
Power Save: 38m

Weight 310g

Dimensions 48.5(w) x 130(h) x 31.3(d) mm

Options

* CT-17 CI-V level convertor
* CS-R10 Cloning software
* OPC-478 Cloning Cable
* LC-140 Carrying Case
* SP-13 Earphone
* HP-4 Headphone
* CP-12L Cigarette lighter cable
* OPC-254L Power Cable

The above info and two .jpg piccies are available on our web site.

All the best

1835. AR2700 Factory PC I/F Question?

Newsgroup: rec.radio.scanner
Date: 1996-10-20 00:00:00 UTC
From: dmitton@mulberry.com
Message-ID: <54e5dk$4lv@gollum.kingston.net>
Source record: 219865

I recently purchased an AR2700 for casual use. It came with the factory PC I/F installed in the battery compartment.

I would like to add a modified 3.5mm stereo plug mod to it.

Where can I obtain the mateing connector for the I/F in the battery compartment?

What are the pin outs for this connector?

All the info I've collected from various web sites is based on the stereo plug mod done directly to the CPU chip ... I'd like to be a little more flexible.

Thanks in advance for any information.

1836. WILL SWAP: Radio Shack PRO-42 Scanner for Dual band ham radio

Newsgroup: rec.radio.scanner
Date: 1996-10-20 00:00:00 UTC
From: tedt@halcyon.com
Message-ID: <tedt-2010961648320001@blv-pm102-ip18.halcyon.com>
Source record: 219866

Will swap my perfect shape Radio Shack PRO-42 Programmable Scanner (with owner's manual) for your perfect shape dual band ham radio.

Scanner receives following bands: 30-50 MHz (VHF Lo); 50-54 MHz (Ham Radio 6m); 138-144 MHz (Government); 144-148 MHz (Ham Radio 2m); 148-174 MHz (VHF Hi); 380-450 MHz (Ham Radio and Government); 450-470 MHz (UHF Lo); 470-512 MHz (UHF Hi).

Also, following features:

FRONT PANEL KEYBOARD - lets you easily enter and change frequencies whenever you want.
LIQUID CRYSTAL DISPLAY - shows the channel number, the frequency you have selected, and several other indicators.
2-SECOND SCAN DELAY - helps you keep from missing replies on a channel while you are scanning.
MEMORY BACKUP - keeps the channel frequencies stored in your scanner's memory for up to 1 hour if you unplug the scanner or if a power failure occurs.
LOCKOUT FUNCTION - lets the scanner skip over specified channels.

Can run off internal batteries of external power. Comes with AC adapter.

E-mail if interested.

A short time ago I was fiddling with my scanner and my multimeter. When I plugged a multimeter lead into the antenna socket of my scanner, I found that I got much better reception than when I used the "antenna Proper." Does this mean that my stock uniden antenna is junk? Can anyone suggest a replacement? I hate to bring up Radio Shack, but is their $9 telescoping antenna any better?

>
> What can it do under computer control?

Not in the normal sense. It has a standard RS-232 port (0-5V)
which may be used to read out or load in channel information.
You can not control the radio functions using this port. Once
the channels are loaded, it becomes a conventional scanner.
This -is- very convenient if you do much travel. I keep several
"scan lists" in my HP 100LX palmtop and can upload different
channel schemes as I go.

>
> Can you program cell frequencies in 30kHz or 12.5kHz steps? (ie, if you

I don't really know the answer to this. I haven't bothered to
listen!

>
> What opions are out on this scanner? Seems not to be popular.

The greatest problem is one of paging transmitter overload.
This occurs only within 500 - 1000 feet of a transmitter, so
your reception is mostly OK. The other minor problem is that
it is made to mount to a police-style mounting bracket and will
not mount under the dash. I'll post an old review later today.

The paging interference can be reduced greatly with a 10 dB
attenuator in the antenna line.

>
> Does Scancat gold support this radio and can it search for frequencies
> under computer control?

Nope.

>
> Does it use a standard serial cable and terminal program or a special
> cable and special computer program to talk to it?
> It uses a standard DB-9 serial cable (you -may- need a null- modem adapter). The DOS
software is custom from Uniden. There
is also a Windows-based package being developed. Preliminary
(trial) versions are available on CompuServe or AOL under the

name PSCAN.EXE. This works a lot better than the DOS version.

I own three of these radios now and despite the shortcomings,
I believe these are one of the niftiest scanners around.

Here is a review I wrote some time ago...

MR8100 Scanner Review

by Ken Wyatt, WA6TTY

(Revised 9/5/96)

Overall: This is a well-built and laid out scanner which was designed with input from the California Highway Patrol. The enclosure is made with cast aluminum and there are numerous internal shields to isolate the various sections of the receiver. It covers all the usual public service (plus 800 MHz), aircraft, and government bands. The only exception is the military aircraft band (240-400 MHz). The radio is about the same physical size as other mobile scanners, but all the controls are mounted on what would be the normal "top" surface, leaving plenty of room for oversized controls, along with a large alphanumeric display. The radio includes 100 channels arranged in banks of 10 and the scan rate may be toggled between either 35 or 100 ch/s. The audio is clean, with three watts of power; adequate for the inside of a dump truck! The radio must be mounted against a flat panel or on top of a floor-mounted system and will not work for the typical under-dash configuration. The radio does not have a built-in speaker, but comes with a remotely-mounted one. Scanner World also supplies IBM-PC programming software (on 3 and 5.25 disks), along with an interface cable. {See note below}

Controls: The radio includes all the usual controls. Missing is a scan search/store feature and the capability to -not- delay a channel. The user may program frequencies, lock out channels, and manually step through programmed channels from the front panel controls.

Display: The display is a large (about) 20 character alphanumeric type with variable backlighting and contrast. It displays the channel number, and either the frequency (to four significant digits) or a user-programmed alpha name (upper/lower case). Unfortunately, while the display indicates frequency out to four decimal places, the firmware only accepts three decimal

places for PLL programming. Thus while you -think- the radio is tuned correctly to one of the "splinter" channels, it's not.

Computer I/O: Yes, this radio may be programmed via an RS-232 port! Software is included to program frequencies, name channels and banks, and set prioity channels (one per band). Scanner World supplied the wrong cable, but those who use the (typical) DB-9 connector (COM1), may simply purchase a "straight-through" 9-pin to 9-pin cable. The frequency (scan) list may then be stored and retrieved from disk. The cellular channels are unavailable via the front panel, but the software allows programming these if you enter the correct password, "ECPA1986"; would you believe! Connection of the scanner must be made to the COM1 port of your computer (not mentioned in the manual).

New MS Windows-based programming software is currently under development and preliminary copies may be obtained via AOL or CompuServe in their ham radio areas. The filename is "PSCAN.EXE". It's really slick!

Performance: The radio performs fairly well, overall. The sensitivity is on par with similar mobile scanners. The receiver IS susceptible to strong signals, such as paging transmitters. This results in an intermod problem where either paging tones will come through or signals will be received that you aren't tuned to. For me, this only occurs within large metropolitan areas, and only in places of high level rf energy. For example, within Colorado Springs, I have run into maybe five or six "bad" localities. At least 95% of the city is OK. As a first trial at solving this, I placed a variable step attenuator in line with the antenna. Usually clicking in 10-30 dB will do the trick, and doesn't impact reception of stations that much. I have also tried Grove's Scanner Filter and while I'm sure it would help if the receiver was overloaded by broadcast stations, it does little for the variety of paging transmitters in this area. The step attenuator seems to work the best and is what I'll use for my permanent installation. I wish the radio had a built-in attenuator like the PRO-200x series.

Summary: The scan rate of 100 ch/s is wonderful. I am usually able to catch the first syllable of a transmission, unless there is multiple traffic occuring. I don't know why one would wish to scan at it's lower rate. The audio is clean with plenty of punch. I find that permanently leaving 20 dB of attenuation between the antenna and radio gets rid of the bulk of intermod problems, while still allowing good reception. I like the fast scan rate and having banks of 10 channels is really convenient if one travels through different areas, or wishes to lock out complete services, etc. I travel a lot, and find it very conveneient to be able to upload a new set of frequencies/channel names every time I enter a new state.

I use my HP 100LS palmtop computer for this task; keeping a host of
frequency files loaded in memory.

Pluses: Good clean audio
100 channels in 10 banks
Fast 100 ch/s scan rate
Alphanumeric channel information
Large readable display
Programmable by computer
Ruggedly built

Minuses: Low-to-moderate problem with intermod
Only choice is a 2 second scan delay
Awkward mounting; no under-dash install. possible
No search and store capability
No military aircraft band

Available only from Scanner World, $289, plus $10 shipping.

NOTE: As of three years ago, Scanner World ran out of these.
Occassionally, they may be found used on rec.radio.forsale.

<rheisner@ix.netcom.com>, the following was written:
> I've seen listings in the FCC files for same frequencies that are
> allocted to McDonalds (35.02/154.600), but could never figure out
> why a Toys R US would have headsets. This Toys R US was using
> 457.5875/467.8125 the same combination that used by KFC.

Toys R Us has a floor walker that has a phone that looks like one of
those headsets that McDonalds uses. The floor walker runs around the
store to tell callers if certain products are in stock when they call --
neat service!! These headsets are not "phones" but rather private uhf
radios that hook into the stores phone system. Kind of like ham radios,
in the 2meter band, being able to hook into repeaters and make phone
calls thru it.

1847. Why doesn't my discone work very well?

Newsgroup: rec.radio.scanner
Date: 1996-10-21 00:00:00 UTC
From: fzbruss@dale.ucdavis.edu
Message-ID: <54gure$qqv@mark.ucdavis.edu>
Source record: 219627

I recently installed a discone antenna about 20 ft. high, but it provides no better reception on 45-165 MHz for my PRO-2006 that it gets using just the little whip antenna mounted on the case. I checked that the cone is grounded OK and that the disc is not shorted to ground. The discone is connected via 75' of RG58 cable; would RG8 improve performance much? Also, there is a large VHF/UHF TV antenna mounted on the same mast as the discone, but about 3' lower. The TV antenna is not connected to anything at the moment, but could it be shielding the discone? Would a pre-amp help, and if so, would a mast-mounted pre-amp be necessary or would an indoor type do? Any advice appreciated.

I disagree, it does not prove anything, nor have I proved Bill was lying.
If a person was once qualified regardless of current status, he is _still_
qualified. His IQ doesn't change simply because his membership lapsed.
Regardless of the distortions you attempt to present, you cannot change
what is in the man's head. Whether you like it or not, once a Mensan,
always a Mensan.

>Obviously, Bill's statement is in-correct & does not match what the
>MENSA headquarters is saying.

All the national Mensa office said is that he was not current in his
membership. Internal policy forbids them from disclosing information
on whether a person used to be a member, a small fact you omitted
in a feeble attempt to distort the truth.

>But, since everyone knows this & he appears to be accrpting a truce,
>we can probably let this drop.

Then why are you still fanning the flames?

First Impressions
The AOR AR-7000 Scanning Receiver
Copyright (c) 1996 Michael E. Harpe

I got to spend about 3 hours with an AR-7000 at the Monitoring Times Convention in Atlanta from 10/18-10/20. What follows is my first impression of the unit based on my playing with it. I had no manual and folks from Grove knew nothing about the unit and brought it along anyway. Thanks, Bob!

The AR-7000 is yet another "DC-to-daylight" receiver built around DSP (Digital Signal Processing) technology. The unit description provided in the previous article was correct so I won't repeat it here...

I sat down at the unit and was immediately impressed with the sparse, yet functional control panel. The user interface is the LCD, a keypad, a four key "joystick" arrow keypad and a detented tuning knob. The user interacts with the unit by selecting different functions on the keypad. Menus are presented to the user for scan and search programming. The menus are reminiscent of BIOS setup menus found in most PCs. The interface is fairly intuitive. I was able to set up scan and search programs after only a few minutes of experiments. The unit can store eight different scan programs and eight different search programs. This makes finding new frequencies a breeze.

The unit's operation will take some getting used to. The squelch is set by selecting a function key marked SQL and rotating the one knob. Other parameters like IF bandwidth, modulation mode, filter width and volume are all set with softkeys and the one knob. Curiously, volume is set by holding down either a raise or lower key marked volume. Entering a frequency into one of the dual VFO memories is accomplished by pushing FREQ and entering the frequency on the keypad. The knob does tune the VFO memories as expected. I would prefer a separate knob for the squelch.

One nice feature of search is that the unit displays signal strength as a moving
histogram that shows strength relative to the squelch threshold. I found this very useful. You must hit SQL to adjust the squelch threshold and hit ENTER to keep the selected setting. I kept making bad entries because of all the function selection I was having to do. This feature does eliminate the problem of not hearing something because the squelch is set too high.

The filters were quite sharp and served to quiet noise down very well. I can't comment too much on performance other than to say that the unit did eveything I asked of it. We were located directly across the street from Hartsfield Airport and I heard HTs being used by ground crews quite clearly.

800 MHz performance seemed OK. It received everything we wanted.

HF performance seemed OK. I don't know what kind of antenna the unit was connected to so I can't comment on the performance. We received WWV on 10 MHz with about an S5 indication. Tuning around on HF is awkward because of the detented knob. The detented knob is a bad design feature and should be replaced with an optical knob in the production unit. Any radio that is used on HF needs a very smooth control.

Overall, I liked the unit. It was next to an ICOM R-8500 and I got a chance for a little side-by-side comparison. One thing that was really obvious was that the ICOM has much better audio. The AR-7000 audio is a bit tinny for my taste. The AR-7000 user interface is superior to the ICOM's. I felt the ICOM was too obscure and required too much time with the manual. On the other hand, the AR-7000 requires a lot of keypad work to set up some things. Lack of a separate squelch control is not good. I don't want to comment too much on RF performance because I don't know enough about what the two radios were connected to.

For Sale

AOR AR8000
Hand Portable Radio Receiver

Full coverage500kHz - 1900MHz USA programing
All-mode recption AM, USB, LSB, CW, NFM, & WFM

Accessories supplied:
2 sets of 4 AA redhargeable NiCad batteries
Mains charger
Extra NiCad wall charger "4 battries at a time"
DC power lead with cigar lighter plug
16cm semi-flex wide band antenna
Belt clip with two screws
Hand strap
Operating manual

I bought it 05/96. Works great!
Asking $500.00 shipped COD in USA

The signal is definitely microwave and is in fact tracked. The antenna
on the helicopter tracks the base. The systems are made by Troll
Industries in Valencia, Ca.

The traffic helicoptors in the SF Bay Area are found between 450 and 451
MHZ. KGO is 450.2125MHZ.

It probably is an "image" of a cellular phone. Radios commonly respond to
frequencies other than that to which they are tuned. Very commonly the
radio will pick up signals which are 21.4Mhz below where they are tuned.
If you subtract 21.4 from your setting, you'll very likely find that
you're in the range of 870 to 894, the frequencies used by cellular
towers to comminicate to the mobile phones.

I beg your pardon? When did that change? They can either
confiscate the scanner, or if you cannot surrender it they
can and will impound the whole car.

And don't just look in the V&T for the answer. Confiscation
is, I think, covered under the CPL. I don't have a copy yet
(next semester).

If the law has indeed changed, I would be happy to hear
about it. I think the NY law as it has been enforced tends
to violate constitutional protections against unreasonable
search and seizure, but the NY Court of Appeals is even more
liberal than the US Supreme Court and people in cars have NO
privacy in this state.

1871. Re: ** Overheating cell phone?? **

Newsgroup: rec.radio.scanner
Date: 1996-10-21 00:00:00 UTC
From: Dave Shaffer <DCS4@psuvm.psu.edu>
Message-ID: <96295.112501DCS4@psuvm.psu.edu>
Source record: 219651

In my previous post, I reported that a NiCad battery on my wife's cell phone was overheating when left connected in the car to a cigarette lighter charge cord. I suspected that the cord was the main problem, and it may yet prove to be part of the problem.

I had a chance to look at the set-up over the weekend. The phone was in the car connected to the power cord. It was not only hot, but if also registered only two bars on the battery meter.

I have a separate motorola phone in my car with a NiMH battery. I switched batteries on the phone and connected my wife's phone to the cord again. 24 hours later it was not hot but registered six bars on the power meter. (Six is the max on these phones.)

Meanwhile, I discharged the ni-cad as completely as possible, which didn't take much time. I then attempted to recharge it overnight and it did not take a full charge. (Three bars.)

I have a more sophisticated charge system in my car that involves a 3-watt booster for the phone. I connected my phone (still with the Ni-Cad battery) to that system this morning and found that the battery was still overheating and not showing a full charge.

Still this morning the phone in my wife's car with my NiMH battery was cool and fully charged.

The Ni-CAd is one year old but had seen a fair amount of use in that time. Given this new evidence, I suspect the battery may have been going bad. The experience so far suggests that the NiMH battery may be just fine on my wife's phone.

Questions...

Is the condition of the Ni-cad just routine, or did I cause it to develop these symptoms by keeping it connected to the charge cord?

Is the difference in NiCad and NiMH batteries part of the issue?

Is there any danger in keeping the battery connected in that fashion?

Can I logically assume that the NiCad is basically a goner and needs to be replaced? Can it be reconditioned?

Thanks again for your comments and input so far...

- Dave

>1) Are they equally illegal, technically, but rarely enforced?''

That is exactly right.

>2) If it were enforced, is it a misdemeanor?

I believe any violation of a Federal statute is a felony.

>3) Is it condoned more being done at a base, rather than a mobile
>scanner?

Makes no difference.

>4) Are their any blatant precedents where someone was prosecuted for
>passive monitoring?

That depends. What do you mean by "passive" monitoring? If
you mean just quietly sitting at home listening and not
telling anybody about it, then prosecution is highly
unlikely. There usually has to be a complaint before there
is any detection and enforcement.

If you mean monitoring and then sharing "spicy" information,
people have been prosecuted for that. It should also be
said that people have avoided prosecution when they have
reported criminal activity that they have overheard.

>5) Could the law legally confiscate your scanner?

Yes.

For further details, check

Source record: 219653

archa@atcon.com (Dan Arsenault) asked:
> ... if there is mod that I could make to receive 72MHZ.

Installing a diode at location D3 on the logic (main) board will enable
54-88 MHz on US/Canada models (it's already there on the European version).
Reception will not be ideal, as the front end is tuned for 30-54 MHz, but
should more than meet your needs.
The procedure is documented in any of the descriptions of the PRO-43
cellular mod. This entails removing diode D4, which may then be moved to the
D3 position.

Reference -
FAAO 7110.65, Operational Priority, paragraph 2-1-4.

If anyone's really interested I can post the entire section, which discusses civil, rescue, military, etc. callsigns.

Source record: 219655

Is it better to use an AC/DC power adapter to power my Pro-2006 or staight from household current. I remember someone saying it reduces heat inside the unit by using an adapter. The back of the 2006 says 13.8 volt. I haven't seen one exactly 13.8 volt. HELP! -Scott

1876. FS:Crystal Scanner?

Newsgroup: rec.radio.scanner

Recently sold a Jetstream (the aircraft model), in very good condition, working, for $10. Bought it at a yard sale for 25 cents.
